It is also a derogative, racist term. Would you call a black man "boy"?

Just to be clear, I'm not saying I am black. I'm just asking the question. I don't address anyone as "boy". It's not good manners, regardless of race or age.

> IDENTIFY all that non-amateur communications (systems or
> equipment)

(N2EY)

>CLAIMS to have "experience" with.

Why? You would not recognize them anyway. Besides, you have no authority to DEMAND anything from me.

Let's see: 25 repetitions of the same expletive deleted in a single post. Must be a new record.

Now here's a few for you, Len.

Tell us about your actual experience with Morse code radio operation. Not what the Army did, or what you've seen others do, or a long diatribe about how old the mode is, the theory behind it, the history, yada yada yada. Just tell us your personal experience actually using the mode.

Also explain to us how your experience in NON-amateur radio somehow makes you more knowledgeable about what's best for the amateur radio service than those who have experience in amateur radio.

Finally, produce the post where I claim to be an "expert" on any subject.

Then we'll see who the

[expletive deleted]

artist really is.

Who's ox could possibly be gored by a few Yanks who get on the ham
radio bands off-watch in Iraq? What's the point to making a legal
hoopla over one of most victimless "crimes" I can imagine? When does
common sense, against all odds, finally transcend The Law? When de
Judge throws the case out as too trivial to bother with.

Oh, absolutely: on having Iraq set its ownself up again and getting us out of having to foot the bill. The only is, do you really think the US Gov't. is going to be satisfied with that (having "others" do the job) and, my fear is that it will be so unsatisfactory that we (the world) are here again in another 20 years...

> Morse code is an encoding scheme, used in the On-Off Keying (OOK) digital mode.

Of course it is from the "engineering" perspective, you're quite
correct, not even a discussion. But that's not my point. My point is
that beyond the technical aspects of Morse, the definitions, etc.
comes the real-world application of Morse as it's used specifically in
ham radio and became a widely used language in the Amateur Service
globally.

There are huge differences between the purposes and usefulness of
Morse as it is still used in ham radio and how it has been used by a
myriad of commercial, government and military entities over the years.
The professional users of the mode had entirely different priorities
and missions to accomplish than hams had and still have except under
very unusual circumstances. Hams have taken Morse in an entirely
different direction and developed it into a particularly effective and
affordable international language for socializing and info swapping
amongst themselves, not for simply passing hard copy around to their
employers and/or their military command structures as was the case in
the professional Morse days. Which is exactly why Morse survives today
in volume on the ham bands but virtually nowhere else. This is also
why the arguments we hear about Morse being "obsolete" today because,
say, the Coast Guard no longer uses Morse is simply bogus nonsense.

As far as the mechanics of the mode go, yes, it's very much a language
but only in the hands of those experienced in it's use. Cutting to the
quick here Morse goes in the ears of the users and comes out of the
mind as a flow of words, phrases and thoughts, not as just streaming
dots and dashes. Therefore Morse is just as legitimately a language as
is any other language. The only differerence between Morse and the
spoken languages is the manner in which it is processed in the mind.

To those who don't have the ability to use Morse of course it's only
another indecipherable encoding scheme, not so different from RTTY in

this respect. This is why those non-users of Morse who diss the mode are the same flavor of nit-wits who bitch about French when they can't speak a word of French. Or any of the plethora of variations on the theme we've seen posted here by the clueless.

By the way none of the above has anything to do with code tests.

Of course you'll have something to offer as proof of your last
statement. It'll likely take the form of the proof of your alleged
operation from T5.

Yeah, and your T5 story has a strong stench to it. You claim your life
and that of your entire unit was in jeopardy during the whole operation
yet your military commander gave your verbal permission to operate
{somebody's}hobby equipment in a recreational radio service.

Sorry, that story just doesn't land on it's feet. Any military commander
worth his bars wouldn't do any such thing until hostilities were well past
both for the personnel involved and the entire surrounding region.
Since our Somalia operation was always quite small and
we left with the rear guard protecting our retreat, no such time ever came
for the relatively tiny contingent. Something smells. Care to explain?

Come on over, I'll show you the license hanging on the wall above
the KWM-2 station. Unlike you I never operated cb and anyone
facing a violation won't be called to appear in an FCC office, so
you aren't so smart yourself.
Was it worth paying a cber $250 to get your extra ticket for you?

Issued between 01 April 2003 and 15 April 2003 were K6ASS and N8SEX.

Neither call went to an operator with those initials.

I'll bet neither of these guys is worried about his mother hearing him on
the radio using these calls, eh...?!?!

Which is why I ask for (not DEMAND) an actual post, not an interpretation.

Besides, any interested party can just go to google and do a search by certain words and author. So it should be a simple task to find the post - if it exists. Which I very much doubt.

An amateur I know caught an ad for the ARS on a Pittsburgh television station over the weekend. I didn't see it, and am relaying what he told me.

The ad was about a young lady who is shaken out of sleep in the middle of the night by the rumbling of an earthquake. She immediately grabs her HT, which is located on the nightstand beside her bed, and starts calling. He didn't get all the details, as just like the Spanish inquisition, he wasn't expecting an ad for the ARS.

According to the gentleman, the commercial was well done and a very decent advertisement for the ARS.

If I see a test, I take it. It appears that if you see a test, you
passively avoid it if you think it is too hard or irrevelent.

That's too bad. Too many people think that way, and all they end up
with is a litany of excuses for not getting anywhere.

It certainly IS much easier to generate excuses for not doing something
than it is to just buckle down and do something.

>

Then you get to sit there with your resentment. Too bad. I bet you
might have something to offer the hobby if you tried, but you just want
to resent things.

> I don't envy Morse coders at all. I have tested for realtime encoding
> abilities. I know I can do it. I don't want to waste my time learning the whole

> skill or a more difficult written test, so the license class is not "just
> handed to us".

You don't know Morse Code, yet you "know" it isn't a useful skill.

You aren't on HF, yet you still know Morse isn't a useful skill?

It very much is a useful skill. Perhaps if you passed the test and got
your ticket, you might find it is a useful skill, or at least you could
then decry it as useless with some authority.

Finally, even if it wasn't such a useful skill, it's part of the test.
Don't wanna learn it? fine, then don't. Enjoy what you don't get by
refusing to learn it.

Since a ham radio license (excluding Tech of course) authorizes operation
on radiotelegraphy, as a large part of ham radio today,
why wouldn't a test of radiotelegraphy ability be in order?
No one requires a ham do use any mode, nor to even own any gear or get on
the air at all. Otherwise in the past there would have had to be parallel
licensing
systemsone with code and one without.
This was once a serious proposal which was
dropped by FCC, evidently as too costly of their resources and unneeded since
they knew that historicallyanyone who wanted to become a ham would find it
within
their reach if they really wanted to do so. Seems the barrier of code was mostly

a phenomena described by your posts above. Many with far more serious
physical poroblems have made it. Mental barriers can be worse than physical.

As for keeping CBers out, that wasn't the idea at all, despite all you've read
here,
some of which I wrote. I've helped so many CBers become licensed hams I
couldn't begin to name them, as a longtime VE and before that in giving Novice
exams.
The idea as far as I was concerned was to keep out CB/freebanders who couldn't
care less about learning and just wanted to memorize the tests and who also
couldn't care less about causing all the trouble they could cause.
THAT was indeed an issue, and AFAIC still is. FCC couldn't care less at this

point.

Beautiful, just beautiful. Clearly says in a few paragraphs what some of us have been trying to say for years. Can I quote the above?

Only thing I could even try to add is a comparison to ASL and other sign languages used by the deaf (and some non-deaf folks). At a basic level, fingerspelling could be considered an "encoding scheme" for the alphabet and numbers, while the word signs could be considered an "encoding scheme" for common words. But ASL and other sign languages are much more than encoding schemes.

It's not? Then why did you use it in your post?

Brian, in this thread it appears that you're the first person to use
the term "REMF". You claim that someone called "Huffy" called Len an
REMF. But you cannot point us to the post where that was done, nor
explain who "Huffy" is.

Fascinating.

> That's the *only* thing you said I disagree with.

Well, then we have a point of disagreement.

From where I sit, it seems that the prime purpose of the license tests
is to insure that hams have the appropiate knowledge and skills to be
amateur radio operators.

> Commercial licenses
> used to be "radiotelephone" and "radiotelegraph". Passing a code test to
> get a radiotelegraph license was entirely reasonable. Having to do so to
> get a radiotelephone license would not have been, nor did FCC require
> it. Not even 5 WPM.

Different situation entirely. Commercial operator licenses covered a
wide variety of radio services, such as radar, broadcasting, public
safety, etc. And they were only operator licenses - none of them
authorized the holder to have a station.
>
> A code test before being allowed to operate in the CW bands would be
> equally reasonable.

OK, let's go down that path a bit. CW/Morse is allowed on all amateur
frequencies except 219-220 MHz, so the "CW bands" could logically be
considered to be all amateur bands except 219-220 MHz.

> However, to require Morse proficiency before being
> allowed to use the voice bands has ever had only one purpose: to keep
> out the dreaded CBrs.

I can see where some folks might think that way. But here are some
more considerations:

- The only Morse test left is 5 wpm, and 5 wpm isn't "proficiency" by
any stretch of the word. 5 wpm is "basic skill". Been that way since
April of 2000 for everyone, and since 1990 for anyone with a
documentable disability.

- Keeping out those who won't follow the rules (not necessarily cbers)
is not the same thing as limiting the number of hams.

- Almost all FCC enforcement actions involving amateur radio operating violations involve amateurs using voice modes. Most of these are not technical in nature (poor signal quality, spurious emissions, etc.) but rather involve jamming, obscenity/profanity, failure to ID, repeater coordination, etc. These are all "cockpit trouble" issues, totally under the control of the operators involved. While code testing does not guarantee these violations won't happen, they sure are rare among hams USING code and other digital modes.

- The dropping of the code test from the Technician class license requirement in 1991 and the restructuring of 2000 did not result in a massive wave of growth. Compare the growth in US amateur radio from 1991 to the present to the growth in an equal period before 1991. So the code test has not been very effective in limiting the number of hams, because when it was reduced and/or eliminated, the growth trend did not change much. Heck, in the 3 years since restructuring, US ham radio has grown by about 11,000. And that was after both code and written testing were reduced.

> You may not feel that way but ULX's derogatory
> referrals to "CBplussers" sadly reflects the more prevalent attitude.

I don't think his attitude is very prevalent. In my experience, very very few hams, regardless of license class or time licensed, have such negative attitudes.

--

I'll toss one other idea out for your consideration, Vito:

Seems to me that one of the biggest headaches FCC has in the area of noncommercial radio is the issue of freebanders and those who abuse cb.

FCC enforcement of these problems is hampered by the need to locate and identify the violators, as well as to develop evidence to warrant a search. IOW the FCC can't just knock on anyone's door and demand to check for an illegal radio installation.

OTOH, when someone applies for an amateur license, they give FCC all sorts of info about themselves and also agree to allow FCC folks to inspect their stations at any reasonable time AND whenever the station is in operation. FCC CAN knock on a ham's door and demand to inspect the ham's station. Much less work for FCC to check out a ham's QTH than that of an unlicensed freebander.

So maybe, just maybe, FCC wants to make amateur radio licenses easier to get so as to fight the freeband problem. If FCC could get all of the freebanders licensed as hams, enforcement would be much easier.

Note that FCC has recently sent out warning notices to several hams suspected of operation around 26 MHz.

Me too, maybe worse. That luxury wasn't allowed when I passed my novice
5 WPM. In those days, Morse was sent from a machine in the front of a
classroom full of testees. Worse, while local ham could administer
novice tests, one had to go to an FCC office or a few hamfests to take
more advanced tests. That meant I had to drive to Norfolk or DC, stay in
a hotel, take a day off work, then drive home. Really sucked.

Dan, I have a very nice life. I'm retired with a comfortable income,
am married to my high school sweetheart, served the Army of
the United States honorably during a wartime, and have worked in
and with radio-electronics for over 50 years.

I am far more "qualified" to evaluate modulations/modes for radio
communication than you could possibly imagine. I've been paid
fairly well to do just that and have never received any negative
comments on that while working regular (and some irregular)
hours.

However, once I entered into an amateur radio newsgroup, I've
encountered any number of oxymoronic ignorant "experts" who've
touted on-off keying codings as being the ultimate achievement in
amateur radio. They have all the appearance and trappings of
morse code cultists, militant cultists who seek to keep US law
fixed for their little minority group's personal wishes.

I DO hope you attended Easter services at the Great Temple of
Morse in your community.

>different opinion?

Somehow I think that Jimmie Miccolis got all upset by not being revered as a sterling radio guru ne god. Poor baby. :-)

[Paul, it's not the British coming this time, just some amateur from Pennsylvania, no relation to the kite-flyer]

Oh, my, ego-wounded profiler Miccolis really DOES have a need to be stroked, admired, worshipped for all his self-perceived greatness. Failure to do so results in some of the above character assassination attempts quoted above. He perceives himself as perfect as any radio god and unhesitatingly attacks any mere mortal who says the least thing negative about his divine intellect...and then irritates all readers about his terrible message wounds of the past, grinding out massive missives of pedantic prose attempting to misdirect everything to his line of thought, away from the negatives to him but severely attacking the character and person of his critics.

That is amateur radio "leadership" for you. Do as he says and okay. Cross the poor baby and the character assassination of his critics goes on for years. :-)

Remember, none of you others have any "need to know" what he is doing or what his experience was...he needs only to say undetailed ambiguous statements to be Absolutely Right Without Question!

3208. Ham Radio's Most wanted - New Ham Award!

Newsgroup: rec.radio.amateur.policy
Date: 2003-04-21 17:20:34 UTC
From: L L O Y D D A V I E S <firebottle@n0vfp.cm>
Message-ID: <3ea42477_2@corp-goliath.newsgroups.com>
Source record: 65398
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.shortwave

Do you know that person on 20 and 75 meters, that does his best to make his mark on the world? Is he not getting the recognition he deserves? Well, here is an upcoming award for him/her/it!

Nominate your favorite ham radio op for the "Ham Radio's most wanted"!

This award give the proper recognition for outstanding QRM'ing! Wheather the QRMing be for 75 and 20 meters, 30 meter CW or 2 meter repeaters, this is the one!

We will take things for, but not limited to:

Wide SSB
Music
Starting bulletins services on top of QSO's
no call signs
roger beeps
just plain being annoying!

people from the past and Present are welcome!

e-mail your nominations to lloyd_vfp@msn.com

You have till the monday before Dayton Hamvention. I will announce via newsgroup post who the winners are, at high noon on Friday of the Dayton Hamvention.

The winner gets a certificate, sutiable for framing in his shack.

That's the *only* thing you said I disagree with. Commercial licenses used to be "radiotelephone" and "radiotelegraph". Passing a code test to get a radiotelegraph license was entirely reasonable. Having to do so to get a radiotelephone license would not have been, nor did FCC require it. Not even 5 WPM.

A code test before being allowed to operate in the CW bands would be equally reasonable. However, to require Morse proficiency before being allowed to use the voice bands has ever had only one purpose: to keep out the dreaded CBrs. You may not feel that way but ULX's derogatory referrals to "CBplussers" sadly reflects the more prevalent attitude.

So did I. Difference is, I don't think everybody else should have to
suffer thru it just because we did. That's not whining, that's being
unselfish.

>

But skating ability is essential to hockey, Morse is not essential to
radio communications, it isn't even very useful. Fun maybe, useful - no.

I appreciate the attention to the spelling at least. I used to complain about my name to my parents. One day when I was about 13 or so, they sat me down and solemnly told me how close they came to naming me Fitzhugh Lee. I sat in stunned silence. A multitude of alternate realities flashed through my mind, all ending up with me getting the ever-loving YZ kicked out of me at school. I never complained again.

Actually I *agree* that they are distracting. But suggestive, distracting, even embarrassing call signs spit out of the FCC computer is not the most pressing issue in ham radio. No one cares anymore that I bought a vanity call a few years ago honoring the Simpsons.

At least no one cares enough. (sniff, sniff)

Robeson isn't.

No matter what job, educational level, employer, or
government/military service that any newsgroup opponent has,
if said opponent fails to honor and revere Robeson's views, they
will be the target of Robeson's arrogant insults, ridicule, name-
calling, put-downs, denigrations, and gross exaggerations of
Robeson's self-importance and experience...plus the typos
done in anger in emotion-laden "replies"...not to mention puerile
bigotry and sexual-connotation comments.

>comes the real-world application of Morse as it's used specifically in
>ham radio and became a widely used language in the Amateur Service
>globally.

From the COMMUNICATIONS sense, the social sense, the language sense, the political sense, as well as the "engineering sense," Kelly's commentary boils down to just ADVERTISING COPY in promotion of that mode. In the basics of this so-called "morse code" it can be stated that it is:

1. One of the simplest of communications methods possible in the primitive electrical technology of the 1840s.

2. It is organized as an encoding of the letters, numbers, and punctuation of the English language.

3. The first "morse code" was just an encoding of numbers and a few symbols. Number combinations had to be used to represent common English words and phrases. Samuel Morse's sponsor and financial backer, Alfred Vail, is the one who suggested the dot-dash encoding to encompass all letters of the English language. In either form, "morse code" is still an encoding scheme to represent written English letters, numbers, and punctuation marks.

4. It is the first widely-used "all-weather, instant" communications scheme as compared to much earlier semaphore and fire systems previously used in Europe. It was not affected by day or night, clouds or rain.

5. It was worked out on landlines, evolving close to the present form in 52 years of commercial service before the first demonstration of radio waves for communication in 1896.

6. It is solely an ON-OFF coding, easily adapted by primitive radio technology of the previous turning of the century.

7. In the first 52 years of "morse code" there is no known entirely-amateur use of the method/mode. The first half-century of "morse code" use was sponsored and developed by commercial and government users.

Critique of Kelly's statements now follows:

>There are huge differences between the purposes and usefulness of
>Morse as it is still used in ham radio and how it has been used by a
>myriad of commercial, government and military entities over the years.
>The professional users of the mode had entirely different priorities
>and missions to accomplish than hams had and still have except under
>very unusual circumstances.

That is mostly untrue. In the beginning of radio, on-off codings were the only possible means of communication for ALL users. The first use of radio was as a COMMUNICATIONS MEDIUM that was quicker and more weather-proof than all previous communicatons methods. ALL users of radio used it for communications.

The information being communicated is not related to the method, medium, or mode of "morse code."

>Hams have taken Morse in an entirely
>different direction and developed it into a particularly effective and
>affordable international language for socializing and info swapping
>amongst themselves, not for simply passing hard copy around to their
>employers and/or their military command structures as was the case in
>the professional Morse days.

Again, mostly incorrect.

As already stated, the first half century of "morse code" use was done by professional users for commercial and government communications. One of those commercial uses was "common carrier communications service" where customers could send "telegrams" to family and friends. As a part of that, telegrapher's abbreviations in communications evolved the double-number groups such as "73" and "88" which survive today.

The word "telegram" was already in the English language by the first radio-as-communications-medium was demonstrated in 1896. While telegrams had high relative cost versus ordinary mail, they

were used by family members and friends for both familial and social communications, being far faster than conventional mail. Considering the rather victorian social mores of the latter 1800s, it is doubtful that male telegraphers exchanged chit-chat with a salutation of "love and kisses" (number pair 88)

International adoption of "morse code" evolved because the basic system of wireline communications represented by the Morse-Vail Telegraphic Apparatus patent of 1844 was economically viable. That was due to the innovative unattended "relay" apparatus of a solenoid (representing the normal sounder) mechanically coupled but electrically isolated contact (representing a key). This increased the wire length range up to four times farther than a single attended-at-both-ends telegraphic circuit. It was probably the birth of the term "relay" in electrical apparatus which itself evolved into a myriad of electric and electronic applications having nothing in common with "morse code."

>Which is exactly why Morse survives today
>in volume on the ham bands but virtually nowhere else. This is also
>why the arguments we hear about Morse being "obsolete" today because,
>say, the Coast Guard no longer uses Morse is simply bogus nonsense.

Kelly is considered quite wrong there. Commercial and government users of "morse code" dropped its use for the following reasons:

1. Manual telegraphy by "morse code" was slower than telegraphy by teleprinting apparatus and subject to interruptions from normal human telegrapher needs and abilities.

2. Manual telegraphy by "morse code" was subject to human errors in communication possible at each end of a circuit that had nothing to do with what was being communicated. Known methods of "error correction" by re-sending resulted in longer times for communication, adding to (1) above.

3. Manual telegraphy by "morse code" required a telegrapher specialist at each end of the circuit. Even at 12-hour work days, a communications carrier for twenty-four hour service required two such specialists paid more than average clerical workers. Teleprinters could operate essentially unattended, needing just ordinary clerical help to enter and retrieve messages.

4. Communications security was lessened by manual telegraphy from reasons of (2) and (3) above plus requiring all security specialists to tailor their encryption-decryption methods to that which could be transmitted by "morse code." Teleprinters were adaptable to on-line encryption-decryption in many forms of such cryptography and entered communications in the 1930s. Teleprinter cryptographic apparatus could be quickly destroyed in case of capture, not true of human telegraphers or crypto-graphic specialists.

5. Mechanical telegraphy at high sustained communications times (underwater cable telegraphy) could generate transmissions at high rate but reception required different specialists and forms of recording (pen-ink traces on paper, phonography by disk impression or magnetic means). Mechanical "morse code" transmission survived only as forms of short automatic identification of certain radio transmitters.

6. While radio communication in any form was a godsend to the maritime world at the previous turn of the century, "morse code" had nothing to do it, only the fact of radio as a medium that could reach beyond the visible horizon was the key to aid. The maritime world had been inhibited to the visible horizon for rapid communication before radio. Radio liberated mariners. They could now communicate quickly to far distant locations. "Morse code" already had a half-century of existance and widespread, international use on land and trained manual telegraphers in commercial and government communications were available and into 2nd and 3rd generations. Any other on-off coding would have sufficed for communication mode but the key to maritime distress and safety communications was the medium of radio physics, not the way communications was done.

7. The maritime world itself adopted the present-day international Global Marine Distress and Safety System or GMDSS. GMDS communications does not require manual telegraphy specialists available at any time while enroute at sea. Anyone on shipboard having relatively simple training can begin GMDS transmissions which carry both a ship identification and a ship's position automatically derived from GPSS or other automatic positioning system). While that puts a damper on emotion-laden stories of heroism at sea by "sparkies," it is many magnitudes better for Safety Of Life At Sea (SOLAS). SOLAS is not kept to preserve wonderful myths alive, its purpose is to keep people alive.

>As far as the mechanics of the mode go, yes, it's very much a language
>but only in the hands of those experienced in it's use.

So is "rap" music with its "lyrics." :-)

Such boosterism for "morse code" is stretching a point beyond normal bounds of linguistic studies. "Morse code" is based on the English language, always has been. It was first devised and used in the United States, the telegraphic system spreading to inter-national wireline use by those countries whose primary language was of alphabetic form, not syllabic or ideographic..

The majority of the world's population has syllabic or ideographic primary languages. If they wish to use "morse codes" in any form, they are required to adapt to English-like alphabetic forms of phrases...or to change the on-off coding to be representative of their primary language. To them, learning "International Morse

Code" literally requires learning a new language.

International Morse Code evolved as a standard in communications due to the burgeoning of various versions of "morse code" in use by the end of World War One. So many versions made it difficult for international telegraphic communications exchanges that a standard was adopted by the CCITT. That standard was based on the most-used version of "morse code" which, at that time, was the representation of letters for English. Standards are done for overall economic considerations, not for linguistic perfection in the case of a communications tool.

It is arrogant, presumptuous, and disingenuous for those having English as a primary language to say that "morse code" is any kind of "universal language." International Morse Code is still a representation of the English language alphabet, punctuation, and "western" numeric characters. Abbreviations used by telegraphers are based on English words. While "CQ" is given semi-official status as "calling all stations" it is still based loosely on the word "seek you." To communicate "FB OM" is based on the English English "Fine Business (good, okay), Old Man (familar form of old friend)." To send "U R 599" is for the complimentary "You Are (received as) <good signal>."

In one way, the abbreviations become associations in the mind similar to a foreign language but they are most certainly of English language origin...and sometimes of local dialects... and sometimes just holdovers from long-ago days of wireline telegraphy shorthand ("R" for affirmative, "73" for best regards).

It would be safe to say "morse code" is an extreme dialect of English which also combines jargon. It isn't a separate language any more than modern-day "technospeak" using English words is a "separate language." To speak "Paralleling the collector load of Q4 with 50 puffs or more will make your highs roll off too fast," would sound like so much gibberish to someone not versed in wideband circuit design. It is perfectly understandable, comprehensible to us involved in circuit design. We don't describe it as any "separate language" or ascribe mythical qualities of anything based on past glories of circuit design...it is just jargon at work, common everyday speech in the laboratories.

>Cutting to the
>quick here Morse goes in the ears of the users and comes out of the
>mind as a flow of words, phrases and thoughts, not as just streaming
>dots and dashes. Therefore Morse is just as legitimately a language as
>is any other language. The only differerence between Morse and the
>spoken languages is the manner in which it is processed in the mind.

The extreme dialect of English with jargon that is "everyday morse code" among amateurs also has the following qualities:

1. It is totally without the normal tonalities, inflections, nuances
of regional dialect found in aural speech of humans. At best,
experienced telegraphers can infer some things about the
distant operator through rhythm, dot-dash spacings, and
some variation on abbreviations. Gender or age identification
is almost entirely missing.

2. Communications rate by "morse code" is, at most, one-fifth
the rate of spoken English for the same text, even giving
"morse code" users all the benefit of prosigns, abbreviations
and other niceties. That is by comparison of slow "morse
code" users with slow speakers...or...comparison of fast
code users with fast speakers. Code users may say that is
"inaccurate" but it is true for text beyond a brief contact
with signal quality exaggeration and "weather report."

3. There is an absence of human emotion conveyed by
"morse code." Laughter is replaced by "HI HI" which
probably accounts for the lack of normal sense of humor
found among code devotees. Expressions of grief or
sorrow must be replaced by trite phrases of emotion,
that carried over to written English by some code
devotees. It might, but not necessarily so, explain
why some alleged code "experts" become over-
emotional in written English communications.

4. "Universality" of International Morse Code is by treaty, not
based on any linguistic study towards perfection. All code
signals have the same tone frequency determined by
receiver tuning, not that of the transmitter. All signals are
monotonic. They could be generated by humans or robots
with little difference (bounded random errors of dot, dash,
and spacing can be introduced in electronic keyers to
simulate human manual sending).

5. "Morse code" requires humans to have some aptitude for
quick association of on-off monotonic sounds with
representation of written characters of a language. This
is not a universal aptitude but is a minority one existing in
about one-fifth of the population. Spoken and written
languages are comprehended much faster by nearly all in
a population.

>To those who don't have the ability to use Morse of course it's only
>another indecipherable encoding scheme, not so different from RTTY in
>this respect.

Teleprinter signals were never intended to be directly interpreted
by humans. Humans have the inherent ability to read familiar
languages and comprehend them visually at rates of 100 to 1000
words per minute equivalent rate. Teleprinters, whether on wire-
line or radio, were designed and intended to convey written
languages directly without need of "signal interpreter" specialists.

Television signals requiring MegaHertz of bandwidth were never
intended to be directly comprehended by humans...yet they are
watched regularly by all ages and genders at 30 complete
images per second.

>This is why those non-users of Morse who diss the mode
>are the same flavor of nit-wits who bitch about French when they can't
>speak a word of French. Or any of the plethora of variations on the
>theme we've seen posted here by the clueless.

The "dissing" of "morse code" users is done for their personal
arrogance and presumption of superiority in a radio hobby when
they put on their (invisible) emperor's new clothes so often. :-)

Many words of French are common in the English vocabulary.
The international spoken form of distress call is "mayday,"
a very close Anglicized version of the French word for "help
me." It is fairly easy to pronounce French, more difficult to
spell it or use it correctly. :-)

If "morse code" mode had any redeeming qualities for radio
communications, it would not have been dropped by all other
radio services or never be considered from the beginning. It
remains only in amateur radio used by a minority who
consider themselves "superior" for possessing a singular
skill of little or no use elsewhere.

>By the way none of the above has anything to do with code tests.

Neither did my critique... :-)

Jimmie has lots of OPERATING experience above 220? :-)

>> However, to require Morse proficiency before being
>> allowed to use the voice bands has ever had only one purpose: to keep
>> out the dreaded CBrs.

>
>I can see where some folks might think that way. But here are some
>more considerations:

Jimmie does morse, therefore morse is GOOD, useful, necessary.

Evident.

>- The only Morse test left is 5 wpm, and 5 wpm isn't "proficiency" by
>any stretch of the word. 5 wpm is "basic skill". Been that way since
>April of 2000 for everyone, and since 1990 for anyone with a
>documentable disability.

Then why keep an unncessary law cluttering up the place?

The FCC MUST do so because a morseman has spoken.

All who are not morsemen are, by implication, "disabled."

>- Keeping out those who won't follow the rules (not necessarily cbers)
>is not the same thing as limiting the number of hams.
>
>- Almost all FCC enforcement actions involving amateur radio operating

"Hear no evil, see no evil." Brass monkey negation.

>Seems to me that one of the biggest headaches FCC has in the area of
>noncommercial radio is the issue of freebanders and those who abuse
>cb.

As a Commissioner at the FCC you have a right to send a memo
to your Chairman. Please do so.

>FCC enforcement of these problems is hampered by the need to locate
>and identify the violators, as well as to develop evidence to warrant
>a search. IOW the FCC can't just knock on anyone's door and demand to
>check for an illegal radio installation.

That will change when the Amatur Schutz Staffel has more power.

No warrant, no problem.

Show your morse keys or into the trucks with you!

>OTOH, when someone applies for an amateur license, they give FCC all
>sorts of info about themselves and also agree to allow FCC folks to
>inspect their stations at any reasonable time AND whenever the station
>is in operation. FCC CAN knock on a ham's door and demand to inspect
>the ham's station. Much less work for FCC to check out a ham's QTH
>than that of an unlicensed freebander.

Borrow Steamy Stalker's pickup truck...you know, the "carpet
cleaner" one. Park it "across their street." Have some "hostile
action" if they don't show their morse keys.

>So maybe, just maybe, FCC wants to make amateur radio licenses easier
>to get so as to fight the freeband problem. If FCC could get all of
>the freebanders licensed as hams, enforcement would be much easier.

No, no, no! Get that Archaic Radiotelegraphy Society PR
machine GOING! Have those lobbyists in DC earn their
retainers! Buttonhole, lobby, argue for the kode keyers!

>Note that FCC has recently sent out warning notices to several hams
>suspected of operation around 26 MHz.

Obviously those hams were not code tested! Shame on them!

Kill for kode! :-)

Tsk, tsk, tsk. Poor baby Anderson (or is it Amdersom?) has gone
apoplectic over lack of reverence for his years of Teletype tickling
escapades. His tail feathers are ruffled. Ruffles have ridges :-) :-)

[Byard, that's not mineral water. Some blow hard from Caiforney went and
fell in the reservoir.]

> Oh, my, ego-wounded profiler Miccolis really DOES have a need to be

> character and person of his critics.

Oh deary dear. Ludicrous Lennie sees himself as superior to any mere radio AMATEUR and quite predictably takes the course of action which all of the readers could see coming. Amdersom's bile takes the form of lengthy electronic epistles, attacking both the character and person of his perceived tormentor.

> That is amateur radio "leadership" for you. Do as he says and okay.
> Cross the poor baby and the character assassination of his critics
> goes on for years. :-)

Tsk, tsk, tsk. Is this the way a PROFESSIONAL in radio and electronics for over fifty years leads others? Your character assassination of Miccolis replaces the civil debate of the removal of the morse code TEST. Why do you do it? It can only be FEAR and EMBARRASSMENT. Not only has Amdersom not convinced readers that he is correct about removing morse testing and eliminating the licensing of mere CHILDREN in the amateur radio service in which he plays no part, his hysterogenic ramblings have earned him no respect among the readers of this newsgroup.

> Remember, none of you others have any "need to know" what he is
> doing or what his experience was...he needs only to say undetailed
> ambiguous statements to be Absolutely Right Without Question!

The poor baby is upset that no one will fill him in on the work activities of Miccolis. He reveals more of his frustration with each post. Miccolis must be immune to Anderson's venom. :-) :-)

Now go don your uniform--yes, nylon windbreaker, striped polo shirt, plaid trousers and white sneakers--and go marching off for a walk around the mall with all the other geezers with empty lives.

Herra Amdersom on pikku paskianen!

...and in that manner dost thou grate upon the literati of this newsgroup.

Dave K8MN

Well Stevie boy,

Maybe you can nominate them for my new ham award!

==========
Do you know that person on 20 and 75 meters, that does his best to make his mark on the world? Is he not getting the recognition he deserves? Well, here is an upcoming award for him/her/it!

Nominate your favorite ham radio op for the "Ham Radio's most wanted"!

This award give the proper recognition for outstanding QRM'ing! Wheather the QRMing be for 75 and 20 meters, 30 meter CW or 2 meter repeaters, this is the one!

We will take things for, but not limited to:

Wide SSB
Music
Starting bulletins services on top of QSO's
no call signs
roger beeps
just plain being annoying!

people from the past and Present are welcome!

e-mail your nominations to lloyd_vfp@msn.com

You have till the monday before Dayton Hamvention. I will announce via newsgroup post who the winners are, at high noon on Friday of the Dayton Hamvention.

The winner gets a certificate, sutiable for framing in his shack.

Hmmmm, N2EY could add that paragraph to his profile of Lame Lennie
and it would fit right along with the earlier denominators.

It isn't that often you see one writing his own sorry description then attributing

its content to others. That all fits Lennie like a comfortable old shoe.

>If I see a test, I take it. It appears that if you see a test, you
>passively avoid it if you think it is too hard or irrevelent.
>

I have taken tests. I don't avoid tests. My good grades in <hard> rf courses show I can pass tests.

Morse code IS irrelevant. Amateur radio licensed Comm Theory Prof apparently agrees. The other rf Profs do not even have amateur radio license, not even the antenna Prof!

>Too many people think that way, and all they end up
>with is a litany of excuses for not getting anywhere.

To many people use Morse to block the real talent in the hobby.

They use an easily (but time consuming) learnable skill as some kind of proof of achievement. Even real emergency comm skills would be more useful than Morse code.

The skill has no use outside amateur radio or anywhere. Its "usefulness" is only to those that made a social agreement that "Morse code will be useful". Juggling(Morse code) is a skill - Outside of the circus(Ham radio), it has little use.

>It certainly IS much easier to generate excuses for not doing something
>than it is to just buckle down and do something.

From a small sample, I know have the ability to learn real-time encoding. Therefore, one cannot say that I cannot do Morse code. I did not make an excuse that I cannot learn it. I made a decision that the limited benefit was not worth the time to learn it.

>I bet you
>might have something to offer the hobby if you tried, but you just want
>to resent things.

Hams only are interested in their aspects. The aspects I would offer, Hams would not be interested in.

Hams like contesting, chasing DX, antennas. Hams have little in common with electronic hobbyists.

>Take the total time you have spent posting to rrap. You almost
>certainly have spent more time on that than you would learning Morse Code.

Just getting the coded license shows you wasted time learning code.

>You don't know Morse Code, yet you "know" it isn't a useful skill.
>
> You aren't on HF, yet you still know Morse isn't a useful skill?

Outside of Ham radio, Morse is not useful. Hospitals, firefighters, etc do not use Morse code. Chasing DX is not valued outside Ham radio.

Morse code is used because of a social agreement in the Ham culture that it is desirable to learn Morse code.

>Perhaps if you passed the test and got
>your ticket, you might find it is a useful skill, or at least you could
>then decry it as useless with some authority.

No, if I learned the code, I would not "decry" it. I would do everything to defend it, since I made the effort to learn it. Much like how I know I won't enjoy a Hamfest, but I try to convince that there will be something useful there.

And relative has discouraged me from going to Hamfests and told me that Hams are old, often non EE people.

>Enjoy what you don't get by
>refusing to learn it.

Its not code so much as Hams focus on contesting, antennas, chasing wallpaper, and other boring activities.

Loose Lennie is determined to give a whole new meaning to the term
Limp Node. Last decade he couldn't even spell it, now he R one.
Surely his mama, 'bout eight decades ago, was frightened by some
neighborhood ham running a spark rig. Ah, 'twas the ozone!

Clearly it's useless attempting to set him straight on the simple direct fact
that ham radio is NOT the rest of the world of radio, and never will be.
But one might draw the assumption that he already knew that, so
we can further assume that he's doing all this out of pure spite toward
any and all radio amateurs. (we can exclude Slim Burke, doesn't look much
like he's any better informed than Licenseless Lennie, his minstrations
notwithstanding, nor his intentions any more pure.)

So like a bad example of the Energizer Bunnie riding a stuck record, round and
round and round they go, they just keep going, and going, and going......

Someone wrote:

I received this from a retired Navy buddy who lives in Alabama.

Last week, the Shelby County Alabama Legislative Delegation hosted a "Stand Up for America Rally." More than 1,200 people attended including featured speakers Chief Justice Roy Moore, Adjutant General Mark Bowen and Alabama State Auditor Beth Chapman.

Attached is a copy of Mrs. Chapman's speech, which resulted in five standing ovations, tremendous applause and an encore. It's a short read and well worth it.

Stand Up for America Rally Speech By: Beth Chapman

I'm here tonight because men and women of the United States military have given their lives for my freedom. I am not here tonight because Sheryl Crowe , Rosie O'Donnell, Martin Sheen, George Clooney, Jane Fonda or Phil Donahue, sacrificed their lives for me.

ME:
How profound and moving! As if Sheryl Crowe, George Clooney, Martin Sheen, et al., believed they were somehow responsible for her right to speak unopposed and before an adoring crowd.

I certainly don't owe my right to speak to the Sean Hannity's and the Ann Coulter's of the world as well as the conservative spin-meister's who love to demonize a whole group of people (the much maligned and hated liberals).The conservative version of political correctness would prohibit anyone's right to speak out on a war they may seem as immoral, if the right-wingers knew they could get away with it. Right now they know they cannot, so they pay lip service to free speech yippie do-dah dah.

Chapman:
If my memory serves me correctly, it was not movie stars or musicians, but the United States Military who fought on the shores of Iwo Jima, the jungles of Vietnam, and the beaches of Normandy.

Me:
How a mature adult could make such an asinine statement as above puzzles me. Does she really think anyone though otherwise? Is this the kind of nutty, self-serving rhetoric we can continue to expect from the lunatic fringe of the conservative party? Note that I am not labeling all conserva-tives as lunatic. I am labeling a select group of conservatives as such.

Chapman:
Tonight, I say we should support the President of the United States and the U.S. Military and tell the liberal,tree-hugging, Birkenstock-wearing, hippy, tie-dyed liberals...

Me:
Yes, the inevitable put downs and insults coming from a small mind that cannot argue a case intelligently but only resort to extremely popular, stock putdowns that occur frequently whenever a few of these nutcases are gathered together. She equates liberal with anti everything American and poisons the well with her childish name calling.

Message:
....to go make their movies and music and whine somewhere else.

Me:
It seems to me the whining is coming from you my dear. The whole world is against you poor, poor, conservatives, isn't it? The mean old god-hating liberals are just gosh-darned determined to wreck your little pathetic world where you gather from time to time to moan about this cruel planet and this mean, old, bad bad bad liberal country. If you don't like America the way it is, leave it. Uh, why are you still here? Oh, I see, you want to "change it" rather than leave it, right? Well, please grant those you despise the same right to try to right a preceived injustice, rather YOU agree with it or not. Jove help us if your ilk ever seized full control of this country. YOU and your conservative co-horts could oppose anything your black hearts desired but you would make certain that those hated liberals would lose their rights to protest anything you are for.

Chapman:
After all, if they lived in Iraq, they wouldn't be allowed the freedom of speech they're being given here today.

Me:
Which the conservatives, if they were honest, would rip away from the liberals in a New York minute if they had sufficent power to do so. After all, they already demonize those who protested the war, and used their god-given right to protest, even in a time of war. Demonization is the first step toward dehuminization, and the next step after that is to strip the dehumanized ones of their rights and then come the stench of the ovens. I hope it never gets that far.

Chapman:
Ironically, they would be put to death at the hands of Sadam Husssein or Osama Bin Laden.

Me:
And in the near future perhaps put to death by a majority of radical conservative myrmidons in the U.S.A. who would do it with a smile on their faces, thinking they were doing God a service?

Chapman:
I want to know how the very people who are against war because of the

loss of life, can possibly be the same people who are for abortion?

Me:
Another canard that needs to be put to rest. Not all those who protest the war are for abortion. Not all who want the woman to decide on the issue of abortion are against the war. This kind of statement does get the party faithful stirred up however and it makes nice rhetoric. I bet the crowd roared on this one.

Chapman:
They are the same people who are for animal rights but against the rights of the unborn.

Me:
Another generalization that reveals the speaker's stupidity and/or a deliberate deception on her part to elicit more applause from her adoring fold. Again, not everyone who believes a woman should decide whether to terminate her preganancy is against the war. Furthermore, those who raise their voices loudly about animal rights are a diverse lot, some with families, some chuchgoers,others even who voted for Bush in 2000. It is a fallacy to believe that all those who cry out about animal rights agree 100% in every other political or religious belief.

You would never know this by reading the biased conservative op-ed pieces and the tendentious talking heads on Radio. The speaker loves to issue all black-white statements that paint the issue as "we conservatives are all good" and "the liberals are all bad." She should try to obtain a good book on logic and learn that generalizations such as she makes makes her look very uneducated. Really, she is just another conservative wrapping herself in the flag, using it to further her own agendas and reveling in the adulations of her comrades.

Chapman:
The movie stars say they want to go to Iraq and serve as "human shields" for the Iraqis. I say let them buy a one-way ticket and go.

Me:
Even though I did not oppose the ousting of Sadaam Hussein by force, I see this statement as one of pure meanness, a cold hearted statement from one who despises those who oppose her views. I really believe this woman would be a danger to society should she ever achieve a status of power much like that of the president.

Chapman:
No one likes war. I hate war!

Me:
How nice of her to say so.

Chapman:
But the one thing I hate more is the fact that this country has been forced into war-innocent people have lost their lives- - and there but for the grace of God, it could have been my brother, my

husband, or even worse my own son.

Me:
The ubiquitous God word is used, no doubt with great effect on the audience. I have no problem with someone mentioning God, but when people begin to play games with His name by using it in speeches merely to win points or playing political football with it or for pure rhetorical it does become tiresome.

Chapman:
On December 7, 1941, there are no records of movie stars treading the blazing waters of Pearl Harbor.

Me:
Neither is there a record of right-wing talking heads and writers like Ann Coulter, Bill O'Reilly, Jack Kinsella, and many others of the same ilk treading the waters of Pearl. But I know that the conservative pundits of today would have remained safely ensconced behind their microphones and computers (typrwriters) railing against the dangerous liberals rather than standing tall and enlisting in the armed forces to fight the real enemy.

Chapman:
On September 11, 2001; there are no photos of movie stars stand ing as "human shields" against the debris and falling bodies ascending from the World Trade Center.

Me:
There are no photos of the Sean Hannity's, Ann Coulter's, Bill O'Relly's, Pat Robertson's, Jerry Falwell's, Jack Kinsella's, etc., standing there as "human shields" either. Hmmmm.

Chapman:
There were only policemen and firemen - - underpaid civil servants who gave their all with nothing expected in return.

Me:
Yes, and no thanks to conservative blowhards like this speaker, who talks the talk, but I doubt could even walk half the walk in the shoes of those brave people who died September 11, 2001.

Chapman:
When the USS Cole was bombed, there were no movie stars guarding the ship - - where were the human shields then?

Me:
Probably the same place she and the conservative talk-show hosts were-sitting on their buns mouthing off about the mean old liberals and how poorly the conservatives are being treated in this society. Why didn't one of them go over there and act as a human shield?

Chapman:
If America's movie stars want to be human shields, let them shield the gang -ridden streets of Los Angeles, or New York City, let them shield the lives

of the children of North Birmingham whose mothers lay them down to sleep on the floor each night to shelter them from stray bullets.

Me:
Well, this is brilliant! Using this profound logic, everytime someone wanted to protest a conservative presidents' war, and they wanted to offer themselves as shields, showing a willingness to die for their beliefs, they would have to justify doing so by first going to the places mentioned by the speaker above, thus rendering their goal useless. I tell you what, let the conservative talking heads put their buns where their mouth is- let them shield those areas above before they use it as a political football and rhetorical tool. The statement above is unadulterated stupidity.

Chapman:
If they want to be human shields, I say let them shield the men and women of honesty and integrity that epitomizes courage and embody the spirit of freedom by wearing the proud uniforms of the United States Military.

Me:
And this should include, again, Neil Boortz, Larry Elder,
Sean Hannity, Ann Coulter, Jack Kinsella, all conservative op-ed writers, then maybe, just maybe, I would begin to see some consistency in the requests of the conservative writers and speakers.

Chapman:
Those are the people who have earned and deserve shielding!

Me:
This is probably the only sensible statement made so far. But, if we shielded them, we would be in bad shape, wouldn't we? Our troops are the finest in the world. They don't, and will never need, shielding from the likes of us.

Chapman:
Throughout the course of history, this country has remained free, not because of movie stars and liberal activists,

Me:
And definitely not because of talk-show hosts and radical right-wing speakers like this one,

Chapman:
but because of brave men and women who hated war too. However, they lay down their lives so that we all may live in freedom. After all - "What greater love hath no man, that he lay down his life for his friend," or in this case a country.

Me:
Yes, a bible quote. This stamps the speaker as "authentic". It's getting to the point if you don't at least once quote the bible in a patriotic speech some in the audience begin to doubt your sincerity. Keep in mind the man who made this quote. He laid down his life, but took it back about 3 days later. The young men who die, providing cover for a comrade, or the

man who throws himself on a grenade, has offered far more than that. If they only could take back their lives after three days!

Chapman:
We should give our military honor and acknowledgement and not let their lives be in vain. If you want to see true human shields, walk through Arlington Cemetery. There lie human shields, heroes, and the BRAVE Americans who didn't get on television and talk about being a human shield - they were human shields.

Me:
I wonder how many right-wing talk-show hosts and op-ed writers are at Arlington? How many bellicose conservative-spouting talk-the-talk but cannot-walk-the-walk rhetoricians are there?

Chapman:
I thank God tonight for freedom - - those who bought and paid for it with their lives in the past - - those who will protect it in the present and defend it in the future.

Me:
I thank the proud men of the U.S. Military, whether Army, Navy, Air-Force or Marines. They are the ones bleeding and dying, not God. Again, she uses God as a rhetorical tool. This no doubt gets the crowd worked up in a frenzy, but I prefer to give the credit to who the credit is due.

Chapman:
America has remained silent too long! God-fearing people have remained silent too long!

Me:
Bulls@#t. For the last 30 years of my life I have heard this trite phrase hundreds, if not thousands, of times. Our radio waves are filled with christian radio stations, Sunday morning tv is an exercise in homilies and liberal bashing. The mail pouches of our mail delivery men and women bulge with religious periodicals berating evolutionists, abortionists, humanists, and they have been doing this for at least 30 years. Judging by copies of religious Journals from the 1950's it was pretty much the same. This message of urgency has been roaring since I was a little child. Revivals, Christian Rock-concerts, Pizza-Bashes at the local church are all used as evangelizing tools as well as opportunities to malign Humanism and Secularism, Evolution and Homosexuality.The above statement is simply warmed over rhetoric from an individual who had great difficulty in finding anything original to say.

Chapman:
We must lift our voices united in a humble prayer to God for guidance and the strength and courage to sustain us throughout whatever the future may hold.

Me:
Yes, the stamp of authenticity. Mention God, prayer, and you receive the "seal of approval." I wonder what God thinks of Himself being used as a

political football. I hope to ask him one day.

Chapman:
After the tragic events of Sept. 11th, my then eleven -year-old son said terrorism is a war against them and us and if you're not one of us, then you're one of them.

Me:
Hitler said this same thing to the German people when it came time to purge the party of some of its more liberal elements. This either-or bifurication is a common tool among right-wing demagogues. Hitler used it with great effect, and his references to God and Jesus Christ were interesting. He made it a crime to protest a war, namely, any war he waged. His evil war on the Jews and on the rest of Europe went virtually unopposed because he made it where you couldn't do it, even if your conscience was against it. God help this country if the ultra-conservatives ever get their way.

It would be only a matter of time before it was illegal to protest a war in process. Then, give it a couple of generations, maybe 3 or 4, and a real demagogue rises to power and unleashes an unholy war on the inhabitants of this earth. What will those whose consciences rebel at the very thought of this war do? They will be helpless to protest, or if they do, it will be at their own peril, because of wishes of the modern day right-wing fanatics. Once a war is in progress, any protest will be seen as "putting our troops in peril".

This phrase was also used by the Nazis in 1943. There was a group of anti-war protestors in Nazi-Germany, who, shortly after the fall of Stalingrad in January 1943, began printing anti-war leaflets and distributing them at the University in Munich. The group was known as the "Weisse Rose" or "White Rose". They saw Hitler as anti-Christian and his war as an unholy war. But thanks to some really handy german laws against protesting the war when a war was in progress, this was a capital offense. The "White Rose" was caught in February 1943 and its members were promptly executed. Two of them were no older than 22. And all of this because a law had been passed at one time that considered any protests in wartime as "putting troops at risk". I find it remarkable the right uses the same expressions today. Incidentally, many Germans today consider the "White Rose" members as heroes against an evil regime.

Chapman:
So in closing tonight, let us be of one accord, let us stand proud, and let us be the human shields of prayer,

Me:
More religious rhetoric. I am not against religion in the public arena, but when it is so obviously done to win brownie points with the adoring flock I cannnot help wonder if God is offended at his name being used in such a vain manner. I don't know what to make of all this ostentatious displays of religion. These people should know this doesn't make you a better christian or a better human being even. It's not what comes out

of your mouth but what emanates from your life 24-7. That is what counts most, in my opinion. Send the troops a letter of encouragement instead, or a box of goodies one can eat and share with his comrades.
They will appreciate this just as much as your prayers. If you are a good christian you don't need to be told to pray. You will do it anyway without a word being spoken.

Chapman:
encouragement and support for the President, our troops and their families and our country.

May God bless America, the land of the free, the home of the brave and the greatest country on the face of this earth!

Me:
Yes, this is the greatest country on the face of the earth. I would have no other. This country is great because men died for this precious freedom and this includes the freedom to dissent. The founding fathers were dissenters of the greatest human king and kingdom of that time. Dissent is one of the greatest freedoms we have and needs to be protected from those who want to make dissent an illegal activity, even if its only during wartime. We or our grandchildren will one day need this freedom to oppose a tyrant who would oppose his will on the world. While this isn't the case with the present adminsitration, the way to a dark, Nazi-like era in American history will be paved by the likes of this speaker in Alabama.

That HT could be very useful if there was an earthquake. Funny, I know someone that survived an earthquake. I did not hear them say "I wish I had a radio".

> he wasn't expecting an ad for the ARS.

And it went unnoticed by anyone that was not already a Ham.

>According to the gentleman, the commercial was well done and a very
>decent advertisement for the ARS.

Did he see the whole ad? Perhaps, HT emergency Comm was part of the humor in a larger ad, such as an ad for potato chips. (When you want one, even an earthquake will not stop you). Sillier ads have been done.

The ad for Rochester Hamfest SAYS "latest communications techniques", but then SHOWS Morse code keys. Morse code is not one of the latest communication techniques.

My ad idea is to have a PBS special on Hamfests. They had one on sandwiches, one on flea markets, so why not Hamfests? Hamfest is one kind of flea market.

Problem is how can they show Hams without coming across as weird, older, less fit group?

>Ham Radio?
>

Of course not. You have such a limited view, you cannot see anything else but "CBplussers".Even the code loving Hams in my local clubs don't complain about CBers interfering like you do. (They do have a cult-like obcession of CBers, however).

Code can also block those that want to experiment on those freqs. Morse does not keep dummies from entering the hobby. You are a good example of that.

>>And relative has discouraged me from going to Hamfests and told me that Hams
>>are old, often non EE people.
>>
>
>Oh my GOD non EEs are Hams, why in the world would you want to waste your
>time
>getting a License than. If I was you I would run, not walk, as fast as I
>could
>from Ham Radio.

Relative has objection that Hams are weird, old - not that they are not EEs.

> Why would you want to waste your time with Boring Ham Radio?

HAM radio is boring <to me>. The rest of amateur radio can be interesting.

Of course and you should hear what they say behind your back

>Code can also block those that want to experiment on those freqs.

Your right code is not required for experimenting, the License already is there . Oh I know they cant experiment on VHF and UHF, they have to have HF first. Sounds like Karls big complaint when he was whinning about lowereing the Requirment for CW.

There are plenty of facts to back this up.

Positive publicity for Ham radio is Ham's responsibility.
Even I have (reluctantly) helped by mentioning a Hamfest to one person and loaning a copy of my ARRL handbook to another. Have you done even that? Seems like you aren't doing your part.

Hmmmm .... wish I had a radio. Weird. Anyone care to inform this guy just what a cell phone is? Soon as you bubble wrap something and put it in phosphorescent colors, suddenly it isn't 'geek', it's 'chick'. I remember the ice storm back in the late 90s - and cell phones were down as were telephones and power lines in a fair chunk of the North East. Seems to me that one of the amateur repeaters was set up for the police since they lost their repeater. Please go back to your padded cell and shut the door quietly.

73 from Rochester, NY

Free? I paid income taxes on over $100,000 this year and I'm semi-retired; and I have been paying taxes since I was 13 years old. I passed my General back when I had to draw circuits and work equations and guess what: I missed one question. What did you pay? Learned Morse too? You must be a pretty pitiful specimen if your only claim to fame is learning Morse and denigrating CBrs. Is that why you are so selfish that you want everybody to suffer just because you had to suffer?

Methinks you protest too much; that in reality you are a CBr who managed to learn Morse while on welfare so Uncle Charlie wouldn't confiscate your killerwatt linear.

Having such an award would not be good for amateur radio. Radio amateurs want to show amateur radio in a positive way. Listing such an award would not do that.

Also, this would damage the person "voted for". I'm not sure this type of "award" is legal. It is surely unethical.

No, what a weird world you live in. It's backwards-minded
people like you, what have held this hobby back and resisted
change for YEARS. First it was CW, then it was "no-code"
now it's Echolink. Hams with mindsets resistant to change
like U are why we are not ahead in the technology game anymore.

Hmmm, why would one worry about who hears them on the air with their callsign? My dad's a ham and when I was on the air, we talked in the round table every morning and my mom would often get on and say howdy! ;) If someone's going to be embarrassed about a callsign, they either need to change it or not get it to begin with...

eh eh , now that you gave me a nice belly laugh. When there is a radio at each end, we're using the internet as a long haul medium and I have NO problems with that so you dont have to go down the path.We're amatuer RADIO operators, we like to propogate data or voice onto our allocated spectrum. ECHOlink should receive an INTERNET award for VOIP usage, whats Amateur Radio got to do with 2 headsets talking to each other ? I simply have a MAJOR issue with ECHOlink and its PC connectivity.

Go and read the threads in the ECHOlink e-group and look at the talk about PIRACY. It has a piss poor validation system, has users on it from the iLink days where there was NO validation. IRLP doesnt allow PC connectivity exactly for this reason.....can't smell the flowers yet ?

In using a PC to communicate instead, what benefit is there for yaesu, kenwood, icom, jrl, hro, gigaparts etc etc etc to stay in the amateur market. Time for them to sell PC's maybe ?

50% of echolink users use their PC's.....WHere is the spectrum in that? I thought this was Amateur Radio ? From the threads, its highly suspicios that many of them are probably not even Amateurs and here is the ARRL rewarding this behaviour....

Oh, sorry I'm backward minded...

Sandman

Mistake #1 is thinking that Echolink is "hi-tech". If you like it,
fine, but it is pretty much a chat room with radio links. It would work
better if the whole thing was carried over the internet.

Hmm, I might do such a thing if I were trying to appeal to a broad
range of interests.

> My ad idea is to have a PBS special on Hamfests. They had one on sandwiches,
> one on flea markets, so why not Hamfests? Hamfest is one kind of flea market.

Nice fixation on hamfests, Vipul!

> Problem is how can they show Hams without coming across as weird, older, less
> fit group?

You probably remember my last report on the attendees at a recent fest
in my area. The only obese and probable social misfit there was the
computer salesman.

Its a pity you don't have more compassion for those who may not be as
lucky as you.

Vipul, are you maybe lonely and like the attention you get by posting
this sort of thing? And even though it is all negative attention, it is
better than just being lonely? Otherwise I can't figure why you post
that sort of comment. I'll bet the police found it handy that they could
communicate with each other during the crisis (please don't try to
downplay that-the only thing that kept it from being a first class
disaster was that the temperatures were relatively moderate for that
time of year after the power went out)

You say just that in the next quote below. You say that radio will come in handy when cell phone does not.

>I did not hear them say "I wish I had a radio".
>
> If a person was trapped, it might come in handy. If they were trying
>to get help with telephones and cellulars out of commision, they might
>think otherwise

How do you know that? Do you work for FEMA?

Why would repeaters last any longer than cell phone towers? Plus all repeater users would share one freq. Not practical in an emergency.

>> And it went unnoticed by anyone that was not already a Ham.
>
> How did you know that?

Awareness of the existance of Hams is low.

>> The ad for Rochester Hamfest SAYS "latest communications techniques", but
>then
>> SHOWS Morse code keys. Morse code is not one of the latest communication
>> techniques.
>
> Hmm, I might do such a thing if I were trying to appeal to a broad
>range of interests.

The latest Comm techniques is NOT shown in the ad. Morse code is. The ad says "for amateur radio, MORSE CODE is the latest communications technique".

>Nice fixation on hamfests, Vipul!

How else will non-Hams learn about Ham radio?

>>>Seems to me
>>>that one of the amateur repeaters was set up for the police since they lost
>>>their repeater.
> I'll bet the police found it handy that they could

One repeater is just is useful as another. I fail to see how the amateur repeater had a benefit in a way that praises the benefits of amateur radio.

Amateur radio is not good for:
Emergency communications

Amateur radio is good for:
International goodwill

Too much "Ham" can be harmful to your health.

Bandini has odor. Helps plants grow. Prissy Parson Bandini helps
only Prissy Parson inflate ego.

>(N2EY)
>> is NOT a radio god who can command What Is Right and What Is Wrong.
>
>Never claimed to be.

All Miccolis statements based on being radio god.

>> "Boy" is the word for a youngster, an under-teenage kid.
>
>I'm 48, Len. You know that because you looked me up in the database. Is there
>some reason you call a 48-year-old "boy" ? Does it make you feel important?

Relative comparison. Miccolis feels hurt. TS. Bandini.

>> That applies to ALL races.
>
>It is also a derogative, racist term. Would you call a black man "boy"?

Gross misdirection. Racial bigotry not issue. Morse speed is
under discussion.

>Just to be clear, I'm not saying I am black. I'm just asking the question. I
>don't address anyone as "boy". It's not good manners, regardless of race or

>age.

Not good manners to call anyone "girlfriend" who is not girlfriend.

>> IDENTIFY all that non-amateur communications (systems or
>> equipment)
>
>(N2EY)
>
>>CLAIMS to have "experience" with.
>
>Why? You would not recognize them anyway. Besides, you have no authority to
>DEMAND anything from me.

Miccolis demands other answer his questions or misdirects.

Bad form.

>Must be a new record.

"Bandini is the word for fertilizer."

>Now here's a few for you, Len.
>
>Tell us about your actual experience with Morse code radio operation. Not what
>the Army did, or what you've seen others do, or a long diatribe about how old
>the mode is, the theory behind it, the history, yada yada yada. Just tell us
>your personal experience actually using the mode.

More misdirection. Not relevant to comparison of systems.

Large load of [explitive] Bandini.

Miccolis has no "need to know."

Rest of radio world abandon morse code as communications medium.

Miccolis cannot grow with times, must continue to tout old
systems. Bad form.

>Also explain to us how your experience in NON-amateur radio somehow makes you
>more knowledgeable about what's best for the amateur radio service than those
>who have experience in amateur radio.

Personal experience not necessary to use in comparing communications
systems. Already done long time ago by acknowledged experts.
Morse code lost. Too bad. Boo hoo. Bye bye.

>Finally, produce the post where I claim to be an "expert" on any subject.
>
>Then we'll see who the
>
>[expletive deleted]

>

Sure do

>The ad says
>"for amateur radio, MORSE CODE is the latest communications technique".

Well your right its not the newest, I guess what they meant to say waS, the only real device you need for real comunications. You know Vipul its the mode that separates the Men from the Boys, CBers from real HAMS. But you dont have to worry about it, you will never be a real Ham anyway.

I agree, David. Sadly, this country is moving in the opposite direction. A local professor, Dr. Danial Abel, has received death threats as a result of two sentences opposing the war in an area newspaper. Three of those treats were phoned in and mailed in to the school itself. Clearly, when considering Rights, some simply don't see past the Second Amendment.

Backwards minded?? As outlined by Sandman, there are problems with
echolink - not with amateur radio using the internet - the main one being
that there are serious authentication issues with it - I mean how in the
hell can we allow a system where it is so easy to get a logon for the system
when you are not a licenced amateur, and yet could access amateur freqs with
it.
Whilst some of the users have RF gateways, many use the system only use
chatrooms - what sort of amateur radio is that where we chat away on the net
rather than chatting away on RF - if we don't use it (the RF), then we could
well loose it as a result of the commercial pressure to grab our freqs.
I would hardly call sandman backwards - he is one of the leading lights in
VK for IRLP, and that is certainly a lot more progressive than plug and play
headset technology. Wake up and smell the roses sunshine.

There are no wankers in the 30m band. Most QRM'ers of any real stature
are too brain dead to be able to work CW at a usable speed. I've never
heard one on that band. Maybe thats why 30m is such a good band. :/ I
ignore QRM'ers on the other bands. I'm not into listening to braying
jackasses. MK

LOL!!
Hear hear.

Face it, anyone who calls themself "sandman" and has a childish "welcome to the sandpit" theme on their website has to questioned.

This fool can't even get "ARRL" correct, and yes, we've all noted his overly defensive nature on many of his posts. Dare anyone say anything against his precious IRLoserP.

What do expect from some sicko that has a history of stalking others on the internet? Ohh, you're not aware of that one either?

Especially for you huh? Amusing actually. You're not a ham of any
persuasion or inclination, ya can't speak the language Putz, Morse or
otherwise but particularly Morse and that's your inescapable bottom
line and the end of any relevance you might have to ham radio in
general much less to the application and use of Morse in the hobby.

> >By the way none of the above has anything to do with code tests.
>
> Neither did my critique... :-)

Lotta folk churn out "critiques" Putz, yours remind me of those David
Duke has produced. At least Duke has a following, but you on the other
hand . . ?

Tsk, tsk. :-)

But then maybe it's time to reward you for all the years of effort
you've faithfully put into all the "critiques" and other contributions
to the hobby you've blessed us with.

Guys: I submit that we can't let the pore thing just peter out into
oblivion without having at least one piece any piece of recognition in
his "CV". That's all he's been looking for over the years, WTF, let's
toss him a bone.

Motion: I hereby nominate Sweet Lenny to the office of "Exhalted Grand
Wizard of RRAP"

Do we have a second?

w3rv

I dunno, Brian, I think he'd fit even better as the Withered Wizer Geezerputz of rrap. And of ALL radio in general. His skills are far more obsolete than anything he can lay onto Morse code. At least *it* is still useful *somewhere* to *somebody*.

Sure, that would work. "Withered Lizard . . ?" Something.

> And of ALL radio in general. His skills are far more obsolete than
> anything he can lay onto Morse code.

Of course, that's why he's down to hanging out in RRAP as his last
gasp at having any relevance and getting any recognition in radio
circles. Imagine how far he'd get with his same old same old
troglodyte BS if he hung out in any of the professional radio groups
instead of here. Being the radio "engineering professional" he'd like
the snooker the world into thinking he is. Was. He actually got stupid
enough to dip a toe into dot antennas a piece back and even the
amateur pros over there cut it off on the spot.

> At least *it* is still useful *somewhere*
> to *somebody*.

Morse? All over the planet 24/365, galls him no end.

Maybe he is actually useful to somebody somewhere, maybe he hauls the
trash out to the curb. We don't know.

Well then, please educate me. I didn't say Morse was useless - it obviously has great recreational value, as witness all the people who enjoy it. Perhaps I will too someday. But whatever practical value it has escapes me, as it has for more than 40 years. There are many things I don't yet know so if you can give me any logical reason(s) why people should have to pass a Morse test to use SSB, et cetera, I'll be glad to have that information and perhaps change my mind.

If I were stuck in a mine or submarine, or ???, I could bang out tap code on a pipe or a wall or whatever but I couldn't send Morse because I'd have no way to make "dahs" vs "dits". OTOH one can send tap code with a Morse key. So, tap code is more versatile. It is also easier to learn/use.

Nah - the FT-817 makes a GREAT 6m rig... and CW on 6m is about as
popular as a stinky sock.

Different folks, different strokes, Mike. I was too "challenged" trying to get some major Navy systems off the ground and out to sea, and figure out what Ivan was going to do to counter them to want anything but recreation and utility out of amateur radio. I'd worked microwave, multiplex, and ship-shore systems for Ma Bell before that, not to mention Army COMINTEL intercept systems, so Amateur technology wasn't exactly challenging. Nor has this been my main hobby. Learning to hold 5 out of 5 in the ten ring with a .45 was more challenging than Morse; ditto learning to shoot over 95% at trap consistantly and racing bikes and cars at the old Riverside, and Willow Springs Ca tracks, getting accepted into Boozefighters MC by Wino Willy hisself, and riding coast to coast a dozen times meant more to me than any QSO - except maybe the ones I got along the way (c:.

Practicing code was a tedious chore to me because it kept me from things I *really* liked doing. Naturally YMMV, as will mine as I age.

Are you serious? hint:
the repeaters often have emergency generators

The amateurs often have mobile rigs and/or battery powered ht's or home
staions that can go off the power grid. You specifically *want* everyone
on one frequency in an emergency. Not practical? Eminently practical!

3313. The need to save the Novice Class license

Newsgroup: rec.radio.amateur.policy
Date: 2003-04-22 21:00:13 UTC
From: horseshoe7@yahoo.com
Message-ID: <5f4fe4c2.0304221300.3996b651@posting.google.com>
Source record: 65550

As the number of Novice Class license-holders dwindles down to a handful, and the elimination of this class of Amateurs seems inevitbable; it seems a good time to reflect on what this means to the US Amateur Radio Service...

Let's look at the term "Novice" itself... the word Novice is derived from the Middle English word "novis" - which means, literally "No Vice"... so, what this means in terms of the rest of the Amateur classes, is that these Novices are the only Operators having "No Vice"... the rest of us have this "vice" of ham radio... some to more degree than others... but, in all cases, we "have the vice"... or, in other words, are "of the vicious"... this can clearly be seen here on this Usenet group, where all of these Non-Novices, fight their vicious battles everyday... yes, the Novices will be missed - as all we will be is "pure vice".

Kellie is getting angry again. Not unusual in a "Type A" personality.
Those are the first to go from heart and stroke problems.

None of the FCC staff and commissioners need have any sort of
amateur radio license to regulate US amateur radio and all the rest
of US civil radio.

FCC can and does TELL HAMS WHAT TO DO.

Laws of the United States of America may be commented on by
any citizen of the USA. No one group of citizens has "more right"
to say something than all others.

>> >By the way none of the above has anything to do with code tests.
>>
>> Neither did my critique... :-)
>
>Lotta folk churn out "critiques" Putz, yours remind me of those David
>Duke has produced. At least Duke has a following, but you on the other
>hand . . ?

All that Kellie can do is loud-mouth a lot of personal pejoratives
without saying one thing relevant on the subject.

The above is typical. Attempt at humiliation of another. Doesn't
work.

>But then maybe it's time to reward you for all the years of effort
>you've faithfully put into all the "critiques" and other contributions
>to the hobby you've blessed us with.

Kellie is confused again. I never "blessed him or other licensees
with the ham radio hobby." :-)

>Guys: I submit that we can't let the pore thing just peter out into
>oblivion without having at least one piece any piece of recognition in
>his "CV". That's all he's been looking for over the years, WTF, let's
>toss him a bone.

Tsk, tsk, tsk. Kellie wants more than a pound of flesh.

In that case, here's the entire critque all over again -

From the COMMUNICATIONS sense, the social sense, the
language sense, the political sense, as well as the "engineering
sense," Kelly's commentary boils down to just ADVERTISING
COPY in promotion of that mode. In the basics of this so-called
"morse code" it can be stated that it is:

1. One of the simplest of communications methods possible in
the primitive electrical technology of the 1840s.

2. It is organized as an encoding of the letters, numbers, and
punctuation of the English language.

3. The first "morse code" was just an encoding of numbers and
a few symbols. Number combinations had to be used to
represent common English words and phrases. Samuel
Morse's sponsor and financial backer, Alfred Vail, is the
one who suggested the dot-dash encoding to encompass
all letters of the English language. In either form, "morse
code" is still an encoding scheme to represent written
English letters, numbers, and punctuation marks.

4. It is the first widely-used "all-weather, instant" communications
scheme as compared to much earlier semaphore and fire
systems previously used in Europe. It was not affected by
day or night, clouds or rain.

5. It was worked out on landlines, evolving close to the present
form in 52 years of commercial service before the first
demonstration of radio waves for communication in 1896.

6. It is solely an ON-OFF coding, easily adapted by primitive
radio technology of the previous turning of the century.

7. In the first 52 years of "morse code" there is no known
entirely-amateur use of the method/mode. The first half-
century of "morse code" use was sponsored and
developed by commercial and government users.

Critique of Kelly's statements now follows:

>There are huge differences between the purposes and usefulness of
>Morse as it is still used in ham radio and how it has been used by a
>myriad of commercial, government and military entities over the years.
>The professional users of the mode had entirely different priorities
>and missions to accomplish than hams had and still have except under
>very unusual circumstances.

That is mostly untrue. In the beginning of radio, on-off codings were
the only possible means of communication for ALL users. The
first use of radio was as a COMMUNICATIONS MEDIUM that was
quicker and more weather-proof than all previous communicatons
methods. ALL users of radio used it for communications.

The information being communicated is not related to the method,
medium, or mode of "morse code."

>Hams have taken Morse in an entirely
>different direction and developed it into a particularly effective and
>affordable international language for socializing and info swapping
>amongst themselves, not for simply passing hard copy around to their
>employers and/or their military command structures as was the case in
>the professional Morse days.

Again, mostly incorrect.

As already stated, the first half century of "morse code" use was
done by professional users for commercial and government
communications. One of those commercial uses was "common
carrier communications service" where customers could send
"telegrams" to family and friends. As a part of that, telegrapher's
abbreviations in communications evolved the double-number groups
such as "73" and "88" which survive today.

The word "telegram" was already in the English language by the
first radio-as-communications-medium was demonstrated in 1896.
While telegrams had high relative cost versus ordinary mail, they
were used by family members and friends for both familial and
social communications, being far faster than conventional mail.
Considering the rather victorian social mores of the latter 1800s,
it is doubtful that male telegraphers exchanged chit-chat with a
salutation of "love and kisses" (number pair 88)

International adoption of "morse code" evolved because the basic
system of wireline communications represented by the Morse-Vail
Telegraphic Apparatus patent of 1844 was economically viable.
That was due to the innovative unattended "relay" apparatus of
a solenoid (representing the normal sounder) mechanically

coupled but electrically isolated contact (representing a key).
This increased the wire length range up to four times farther
than a single attended-at-both-ends telegraphic circuit. It was
probably the birth of the term "relay" in electrical apparatus
which itself evolved into a myriad of electric and electronic
applications having nothing in common with "morse code."

>Which is exactly why Morse survives today
>in volume on the ham bands but virtually nowhere else. This is also
>why the arguments we hear about Morse being "obsolete" today because,
>say, the Coast Guard no longer uses Morse is simply bogus nonsense.

Kelly is considered quite wrong there. Commercial and government
users of "morse code" dropped its use for the following reasons:

1. Manual telegraphy by "morse code" was slower than telegraphy
by teleprinting apparatus and subject to interruptions from
normal human telegrapher needs and abilities.

2. Manual telegraphy by "morse code" was subject to human
errors in communication possible at each end of a circuit that
had nothing to do with what was being communicated. Known
methods of "error correction" by re-sending resulted in longer
times for communication, adding to (1) above.

3. Manual telegraphy by "morse code" required a telegrapher
specialist at each end of the circuit. Even at 12-hour work days,
a communications carrier for twenty-four hour service required
two such specialists paid more than average clerical workers.
Teleprinters could operate essentially unattended, needing
just ordinary clerical help to enter and retrieve messages.

4. Communications security was lessened by manual telegraphy
from reasons of (2) and (3) above plus requiring all security
specialists to tailor their encryption-decryption methods to that
which could be transmitted by "morse code." Teleprinters
were adaptable to on-line encryption-decryption in many forms
of such cryptography and entered communications in the 1930s.
Teleprinter cryptographic apparatus could be quickly destroyed
in case of capture, not true of human telegraphers or crypto-
graphic specialists.

5. Mechanical telegraphy at high sustained communications times
(underwater cable telegraphy) could generate transmissions at
high rate but reception required different specialists and forms of
recording (pen-ink traces on paper, phonography by disk
impression or magnetic means). Mechanical "morse code"
transmission survived only as forms of short automatic
identification of certain radio transmitters.

6. While radio communication in any form was a godsend to the
maritime world at the previous turn of the century, "morse
code" had nothing to do it, only the fact of radio as a medium

that could reach beyond the visible horizon was the key to aid. The maritime world had been inhibited to the visible horizon for rapid communication before radio. Radio liberated mariners. They could now communicate quickly to far distant locations. "Morse code" already had a half-century of existance and widespread, international use on land and trained manual telegraphers in commercial and government communications were available and into 2nd and 3rd generations. Any other on-off coding would have sufficed for communication mode but the key to maritime distress and safety communications was the medium of radio physics, not the way communications was done.

7. The maritime world itself adopted the present-day international Global Marine Distress and Safety System or GMDSS. GMDS communications does not require manual telegraphy specialists available at any time while enroute at sea. Anyone on shipboard having relatively simple training can begin GMDS transmissions which carry both a ship identification and a ship's position automatically derived from GPSS or other automatic positioning system). While that puts a damper on emotion-laden stories of heroism at sea by "sparkies," it is many magnitudes better for Safety Of Life At Sea (SOLAS). SOLAS is not kept to preserve wonderful myths alive, its purpose is to keep people alive.

>As far as the mechanics of the mode go, yes, it's very much a language
>but only in the hands of those experienced in it's use.

So is "rap" music with its "lyrics." :-)

Such boosterism for "morse code" is stretching a point beyond normal bounds of linguistic studies. "Morse code" is based on the English language, always has been. It was first devised and used in the United States, the telegraphic system spreading to inter-national wireline use by those countries whose primary language was of alphabetic form, not syllabic or ideographic..

The majority of the world's population has syllabic or ideographic primary languages. If they wish to use "morse codes" in any form, they are required to adapt to English-like alphabetic forms of phrases...or to change the on-off coding to be representative of their primary language. To them, learning "International Morse Code" literally requires learning a new language.

International Morse Code evolved as a standard in communications due to the burgeoning of various versions of "morse code" in use by the end of World War One. So many versions made it difficult for international telegraphic communications exchanges that a standard was adopted by the CCITT. That standard was based on the most-used version of "morse code" which, at that time, was the representation of letters for English. Standards are done for overall economic considerations, not for linguistic perfection in

the case of a communications tool.

It is arrogant, presumptuous, and disingenuous for those having English as a primary language to say that "morse code" is any kind of "universal language." International Morse Code is still a representation of the English language alphabet, punctuation, and "western" numeric characters. Abbreviations used by telegraphers are based on English words. While "CQ" is given semi-official status as "calling all stations" it is still based loosely on the word "seek you." To communicate "FB OM" is based on the English English "Fine Business (good, okay), Old Man (familar form of old friend)." To send "U R 599" is for the complimentary "You Are (received as) <good signal>."

In one way, the abbreviations become associations in the mind similar to a foreign language but they are most certainly of English language origin...and sometimes of local dialects... and sometimes just holdovers from long-ago days of wireline telegraphy shorthand ("R" for affirmative, "73" for best regards).

It would be safe to say "morse code" is an extreme dialect of English which also combines jargon. It isn't a separate language any more than modern-day "technospeak" using English words is a "separate language." To speak "Paralleling the collector load of Q4 with 50 puffs or more will make your highs roll off too fast," would sound like so much gibberish to someone not versed in wideband circuit design. It is perfectly understandable, comprehensible to us involved in circuit design. We don't describe it as any "separate language" or ascribe mythical qualities of anything based on past glories of circuit design...it is just jargon at work, common everyday speech in the laboratories.

>Cutting to the
>quick here Morse goes in the ears of the users and comes out of the
>mind as a flow of words, phrases and thoughts, not as just streaming
>dots and dashes. Therefore Morse is just as legitimately a language as
>is any other language. The only differerence between Morse and the
>spoken languages is the manner in which it is processed in the mind.

The extreme dialect of English with jargon that is "everyday morse code" among amateurs also has the following qualities:

1. It is totally without the normal tonalities, inflections, nuances of regional dialect found in aural speech of humans. At best, experienced telegraphers can infer some things about the distant operator through rhythm, dot-dash spacings, and some variation on abbreviations. Gender or age identification is almost entirely missing.

2. Communications rate by "morse code" is, at most, one-fifth the rate of spoken English for the same text, even giving

"morse code" users all the benefit of prosigns, abbreviations
and other niceties. That is by comparison of slow "morse
code" users with slow speakers...or...comparison of fast
code users with fast speakers. Code users may say that is
"inaccurate" but it is true for text beyond a brief contact
with signal quality exaggeration and "weather report."

3. There is an absence of human emotion conveyed by
"morse code." Laughter is replaced by "HI HI" which
probably accounts for the lack of normal sense of humor
found among code devotees. Expressions of grief or
sorrow must be replaced by trite phrases of emotion,
that carried over to written English by some code
devotees. It might, but not necessarily so, explain
why some alleged code "experts" become over-
emotional in written English communications.

4. "Universality" of International Morse Code is by treaty, not
based on any linguistic study towards perfection. All code
signals have the same tone frequency determined by
receiver tuning, not that of the transmitter. All signals are
monotonic. They could be generated by humans or robots
with little difference (bounded random errors of dot, dash,
and spacing can be introduced in electronic keyers to
simulate human manual sending).

5. "Morse code" requires humans to have some aptitude for
quick association of on-off monotonic sounds with
representation of written characters of a language. This
is not a universal aptitude but is a minority one existing in
about one-fifth of the population. Spoken and written
languages are comprehended much faster by nearly all in
a population.

>To those who don't have the ability to use Morse of course it's only
>another indecipherable encoding scheme, not so different from RTTY in
>this respect.

Teleprinter signals were never intended to be directly interpreted
by humans. Humans have the inherent ability to read familiar
languages and comprehend them visually at rates of 100 to 1000
words per minute equivalent rate. Teleprinters, whether on wire-
line or radio, were designed and intended to convey written
languages directly without need of "signal interpreter" specialists.

Television signals requiring MegaHertz of bandwidth were never
intended to be directly comprehended by humans...yet they are
watched regularly by all ages and genders at 30 complete
images per second.

>This is why those non-users of Morse who diss the mode
>are the same flavor of nit-wits who bitch about French when they can't

>speak a word of French. Or any of the plethora of variations on the
>theme we've seen posted here by the clueless.

The "dissing" of "morse code" users is done for their personal
arrogance and presumption of superiority in a radio hobby when
they put on their (invisible) emperor's new clothes so often. :-)

Many words of French are common in the English vocabulary.
The international spoken form of distress call is "mayday,"
a very close Anglicized version of the French word for "help
me." It is fairly easy to pronounce French, more difficult to
spell it or use it correctly. :-)

If "morse code" mode had any redeeming qualities for radio
communications, it would not have been dropped by all other
radio services or never be considered from the beginning. It
remains only in amateur radio used by a minority who
consider themselves "superior" for possessing a singular
skill of little or no use elsewhere.

There, maybe Kellie can start concentrating on the SUBJECT
instead of his usual personal insults. He can return the white
sheet to his solitary bed...hopefully after laundering it...

>check for an illegal radio installation.

FCC enforcement agents could - and did - knock on the door and
-request- to make an inspection but do not have the authority to
enter by force if refused. It takes a court order (warrant) for
that to happpen. If there is evidence of operation in violation
of law or rules, the FCC has the authority to issue a monetary
penalty (administrative version of a fine) against the operator.

>OTOH, when someone applies for an amateur license, they give FCC all
>sorts of info about themselves and also agree to allow FCC folks to
>inspect their stations at any reasonable time AND whenever the station
>is in operation. FCC CAN knock on a ham's door and demand to inspect
>the ham's station.

Again, the FCC cannot enter by force if refused, but the "hook"
that the FCC has is much easier - it can suspend/revoke the
amateur license as well as issue a monetary penalty.

>Much less work for FCC to check out a ham's QTH
>than that of an unlicensed freebander.

>So maybe, just maybe, FCC wants to make amateur radio licenses easier
>to get so as to fight the freeband problem. If FCC could get all of the
>freebanders licensed as hams, enforcement would be much easier.

Another way of looking at it is that the courts and The
Congress take the easy way out and try to define what they
consider the "root problem" (whether that is the problem or
not). In the case of a freebander, the issue is that the
operator did not have a license. How to solve that - change
the rules so that s/he gets licensed or can legally operate
without one. Problem solved (??) and case closed.

I can't believe how stupid you are.

Novice is actually derrived from the latin adjective NOVUS which means new,
plus the noun suffix -ICE, meaning "possessing a state or quality." Therefore,
the combined defintion is "[a person] possessing the quality of being new."

Hey, youse guys lay off my bud Vito, his bona fides are all there. He can't help it
if he never5 got around to appreciating CW, and he's already said he may just find
the time to do it in his upcoming retirement. I can accept that. If I've learned
anything in life it IS "different strokes for different folks" has to be the key to
survival of us all, or at least hopefully most of us- some strokes out there just
caused the strokers to "get stroked" bigtime in the past year or so, and that's
the way it has to be. The survivors gotta live with it.

But let Vito enjoy the hobby as he can and will, and do so yourself. And if I had
a KA3--- callsign that I could trade in for the same suffix as K3--- for 12 bucks
a ten year term, I'd do it in a flash, as surely you'all would too.

> alphabet and numbers, while the word signs could be considered an
> "encoding scheme" for common words. But ASL and other sign languages
> are much more than encoding schemes.

When one gets right down to it ASL, Morse, handwriting and all the
rest are simply langauges which use an assortment of different
input/output "devices" to communcate with the base language. For
example: In this country the base language is American English.
Thoughts, concepts & data are created in the mind in base English. To
be able to transmit the thoughts, concepts and data to other users of
the base language one engages whichever of what I call the
"communications languages" gets the job done given specific situations
and the available communications assets. These range from speaking &
hearing, ASL, Morse, reading & writing, and who knows how many others
and they can obviously be mixed.

Comes the question of whether my "communications languages" are
encoding schemes or are actually languages. I don't know nor do I care
because that's an exercise in semantics circle-jerking which is not my
schtick. What I do know for certain is that if Morse is defined as an

encoding scheme then so are all the rest of the mechanisms we use to communicate with each other.

Thats not enough. Local repeater went down and there was no storm. Can you cite specific examples where amateur repeaters are better than non-amateur repeaters?

>Hmm, I might do such a thing if I were trying to appeal to a broad
>>>range of interests.

Showing Morse code keyers would make those that were interested in the <lastest> communications techniques less interested in amateur radio.

>How you going to illustrate the latest techniques?

There are ways. Show Walsh codes or Turbo codes as numbers running across. Have a bunch of waveforms, etc.

There actually was something at a Hamfest/Convention. A setup was there where someone used a network analyzer and some patch antennas. This kind of stuff is <rarely> there. (It is usually the exception, not the rule at Hamfests). This is the stuff that should be mentioned in ad, not Morse code keyers.

Or show people using microwave equipment. Show radio amateurs using them.

Useful? Definitely yes. I've seen several occasions when the HF bands were in too poor a condition to support understandable voice communications but the people on CW/Morse were having plenty of good, readable QSOs. While some of the other digital modes would also work, all the other digital modes require that you have a computer hooked into your radio.

There's anohter example of symbol encoding.

>But ASL and other sign languages
>are much more than encoding schemes.

Like how?

Also note, there is a need for sign language. It is used to communicate for handicapped people. Morse code has not such use. Also, hardware can encode and decode Morse code symbols so people don't have to.

That is one person's opinion. There are other people with equal credentials that believe just the opposite. Besides until you've been on HF (i.e. shortwave) and had the band deteriorate to the point where voice signals were unintelligible, you don't have the background to evaluate the relevancy of Morse code. And don't rant about the other digital modes. All the other digital modes require that a computer be hooked into the radio.

>
> >Too many people think that way, and all they end up

But one can use that argument in reverse. Inside the circus (Ham radio),
juggling (Morse code) is very useful.

with
> electronic hobbyists.
>

Then why do you keep blathering on about amateur radio as if you had an
interest in it. It has become quite apparent that you are only interested
in electronics. Therefore amateur radio probably isn't for you.

> And relative has discouraged me from going to Hamfests and told me that
Hams
> are old, often non EE people.

Why should ham radio be limited to EE people? Why should they even be in
the majority? Several developments in ham radio were made by people who
had no EE background whatsoever. Ham radio is intended for anyone who has
sufficient interest in learning the basic knowledge required for operating,
maintaining a legal functioning set up, and many other aspects of ham radio.
I know doctors, lawyers, truck drivers, engineers, and people in just about
every career you can name who are amateur radio operators and that's the way
it was intended to be and should be.

From Vshah101's many previous postings it can be deduced that his divisions
goes like this:
Everything Vshah101 likes (which is only electronics) is amateur radio
Everything Vshah101 dislikes (which is all other aspects) is ham radio.

You show your ignorance about emergency communications. There was an excellent article in QST about the major contribution in communications support made by the ham radio operators at the World Trade Center disaster site. There are emergencies on a regular basis where amateur radio has been the only way to get enough communications into and out of an area.

Why do repeaters last longer? Simple. There are many INDENDENT repeaters. If one goes down, the others are still accessible. With cell phones, if one tower goes down, you've lost communications in a wide area. Also hams can, on fairly short notice, dismantle their repeater and move it to a more suitable location as was done for the 9/11 disaster. Even if the repeaters are unavailable, many amateur radio operators (you do have to study the techniques) also know how to effectively and accurately relay messages from one operator to another to get to it's final destination.

Cell phone systems and regular phone systems are only designed to handle normal traffic loads with only small margins for typical peak usage. They are very short of capacity when major disasters occur. Phone calls, both cellular and regular, were taking over 1/2 hour or more to get through for days after the World Trade Centers fell.

When an emergency is declared, the FCC can and does allocate certain frequencies for usage during the emergency. Those not involved in those communications are required to stay off those frequencies. This was done for the 9/11 disaster and is frequently done for hurricanes and has been done just this past winter for a major ice storm.

The group handling the communications has procedures to move "traffic" as it is called smoothly and effectively. There is a "net control" who directs the communications. The other operators can only speak when directed to do so by the net control unless an immediate threat to life or limb occurs and then there is a procedure to immediately break in and get the critical message transmitted.

> Emergency communications
>

Amateur radio has proven its worth many times over for emergency communications. Time and again they have provided vital emergency communications. ARRL, a major organization for amateur radio, makes available extensive training courses on emergency preparedness and radio procedures.

Emergency preparedness groups for the nation, cities, states, and counties factor the availability of amateur radio into their emergency plans. They know, even if you do not, that neither commercial communications (phones and cell phones) nor standard emergency communications (police, fire, etc) have the capacity to handle even a medium sized disaster let alone a large scale emergency.

> Amateur radio is good for:
> International goodwill

And it's also good for international goodwill.

The World Trade Center disaster.
The ice storms in some parts of this country this past winter
Almost every major hurricane over the last several decades.

Plus amateurs have message relay techniques, if they care to study them,
that enable them to get messages in and out without a repeater anyway.

To the non-ham, they wouldn't be able to tell the difference between
microwave equipment and other radio equipment.

>Morse code IS irrelevant. Amateur radio licensed Comm Theory Prof apparently
>agrees. The other rf Profs do not even have amateur radio license, not even
>the
>antenna Prof!

Morse Code is not irrelevent. It is irrelevent to YOU, since you elect to
remain a No Code tech, and that's alright.

I doubt your "profs" have a clue about anything beyond the theoretical, if
you are the end result of thier endeavors.

>To many people use Morse to block the real talent in the hobby.

Huh...?!?!

>They use an easily (but time consuming) learnable skill as some kind of proof
>of achievement.

It IS an achievement, Vippy. ALL learning is an achievement. Even for
you.

>Even real emergency comm skills would be more useful than Morse
>code.

What "emergency comm skills" SUFFER because of one's proficiency with
Morse Code, Vipul? Real-time examples, please, not some vague comments of
vaporous "profs"...

>The skill has no use outside amateur radio or anywhere.

TIS IS AN AMATEUR RADIO FORUM, Vipul...!!! Who CARES where else it may be
useful...?!?!

>Its "usefulness" is
>only to those that made a social agreement that "Morse code will be useful".

Whew...Solid bovine by-product there, Vippy.

It is USEFUL to anyone who makes a contact with another Amateur Radio
station. No "agreements" need be made.

>Juggling(Morse code) is a skill - Outside of the circus(Ham radio), it has
>little use.

Is this more of how you "support" Amateur Radio, Vippy? To compare it to
a "circus"...?!?!

> >It certainly IS much easier to generate excuses for not doing something
>>than it is to just buckle down and do something.
>
>From a small sample, I know have the ability to learn real-time encoding.
>Therefore, one cannot say that I cannot do Morse code.

Sure "one" can...Hre...I'll do it:

"Vipul Shah cannot learn Morse Code".

See...I said it. Can you prove me wrong?

>I did not make an excuse
>that I cannot learn it. I made a decision that the limited benefit was not
>worth the time to learn it.

Since you ahev decided that it's not useful for YOU, and yuo have made
this personal choice, why do you find it necessary to be abuseive and insulting
to those who DO choose to do it...?!?!

>>I bet you
>>might have something to offer the hobby if you tried, but you just want
>>to resent things.
>
>Hams only are interested in their aspects. The aspects I would offer, Hams
>would not be interested in.

Obviously not, Vipul. You can't seem to get the satisfaction of "winning
converts" at the local Amateur Radio clubs.

>Hams like contesting, chasing DX, antennas. Hams have little in common with
>electronic hobbyists.

More solid bovine by-product.

>>Take the total time you have spent posting to rrap. You almost
>>certainly have spent more time on that than you would learning Morse Code.
>
>Just getting the coded license shows you wasted time learning code.

Not if you achieved a goal...If getting an Amateur General or Amateur
Extra class license was the goal, it was time well spent. Otherwise your goals
could not be achieved.

>Outside of Ham radio, Morse is not useful. Hospitals, firefighters, etc do
>not
>use Morse code. Chasing DX is not valued outside Ham radio.

So? This is a forum about Amateur Radio. Youa re free to discuss whatever
you want since it's unmoderated, but in the context of AMATEUR Radio, Morse
Code IS completely relevent AND useful.

>Morse code is used because of a social agreement in the Ham culture that it
>is
>desirable to learn Morse code.

Morse Code is used because it represents a minimum of required technology
to employ and permits operators with different languages to communicate at a
basic level and be mutually understood.

>No, if I learned the code, I would not "decry" it.

SURE you WOULD! Absolutely NO differently than you "decry" Amateur Radio
in non-Amateur Radio forums now!

>I would do everything to
>defend it, since I made the effort to learn it.

SURE you WOULD! Absolutely no differently than you "support" Amateur Radio
in non-Amateur Radio forums now!

>Much like how I know I won't
>enjoy a Hamfest, but I try to convince that there will be something useful
>there.

Oh...I see...You have unabashedly denigrated just about every aspect of
Hamfests in this forum and rec.radio.CB despite insisting that you "support"
Amateur Radio.

NOW you say you'd "support" Morse Code if you learned it even though you
don't like it.

To say you'll "support" something when in reality you don't like it or
even disdain it is to LIE, Vipul.

>And relative has discouraged me from going to Hamfests and told me that Hams
>are old, often non EE people.

Some of my relatives have ried to discourage me from going to 7-11's since
many clerks there are old and from central Asian countries, often non-USA
people.

(Are you getting the drift on just how bigoted that comment of YOURS
sounded, Vippy?)

>Its not code so much as Hams focus on contesting, antennas, chasing
>wallpaper,
>and other boring activities.

If ALL you want to do is tinker or "homebrew", Vippy, I can almost
absolutely assure you that no contester, certificate chaser or antenna fanatic
will enter your home and drag you away and FORCE you to do any of that.

I'm not sure which things you mean, Dave. Here's a list:

1) work for the US government
2) in any possible capacity for US foreign policy
3) prattle endlessly about those subjects which do NOT involve amateur radio.
4) work for any railroad or have any stated work experience in railroading
5) been a member of the United States armed forces
6) implied expert knowledge of military policy, plans, technology, and life as

a military person.
7) spout endlessly in a number of fields of work and policy that have nothing at all to do with amateur radio.
8) irrelevant, misleading, misdirectioning, and, in general, just a self-promoting bullshit artist.

Which ones has Len done? Obviously, he's done 1, 3, 5, 6, 7, and 8. But there's no evidence he's ever done 2 or 4
>
>Gee, Leonard, you aren't involved in amateur radio in the tiniest way

Thanks, Dave.

btw, Len states categorically (about me):

"you have stated IN HERE that you are an expert in knowledge of railroads"

I went looking for such a post, and came up with not a single post where I claimed to be an expert in knowledge of railroads. I do know a bit about the steel-wheel stuff, but I leave the pronouncement of "expert" to others.

So we are left with a puzzle: Did Len LIE when he made that claim, or did ne just make an ERROR? Will he admit to it, and apologize for saying untrue things about another, ow will he attack the messenger?

THAT is the very level of experience that causes those who haven't had it
to doubt the usefulness of Morse radiotelegraphy. On landline it wouldn't work
the same at all. Once they've been there, and seen the light, that attitude does
change - For those who bother to make the trip.

> While
> some of the other digital modes would also work, all the other digital modes
> require that you have a computer hooked into your radio.

Indeed, and no on ever said that there exists no more efficient modes than CW.

Of course those who still have no experience will say that idea was the force
behind
retaining CW and a test for it, but it's just plain wrong.

>>Ham Radio?

>Of course not. You have such a limited view, you cannot see anything else but
>"CBplussers".

I'll be the first one to acknowledge that Code tested or not, Brucie is
one of the most vile and bigoted idiots in this NG. However when it comes to
"limited view(s)", you border on myopic, Vipul.

>Even the code loving Hams in my local clubs don't complain about
>CBers interfering like you do. (They do have a cult-like obcession of CBers,
>however).

Wait, Vippy...You claim they don't "complain" about CBers on the one hand,
then you claim they ahve a "cult -like obcession" (sic) with them.

This alone, if it weren't already so clear, makes it CRYSTAL clear to me
that you have no idea of what a cult is or what "cult-like" is.

>Code can also block those that want to experiment on those freqs.

How?

>Morse does
>not keep dummies from entering the hobby. You are a good example of that.

And lack of Morse testing does not KEEP "dummies from entering the hobby"
either. While I'd stop way-short of calling you a dummy, you certainly do not
present yourself as reasonably knowledgeable on a great many aspects of
radiocommunication.

>Relative has objection that Hams are weird, old - not that they are not EEs.

Heaven forbid your RELATIVES would want you to associate with non-EE's. Do
they have the same reservations about Protestants, Hispanics and non-Central
Asian immigrants?

>HAM radio is boring <to me>. The rest of amateur radio can be interesting.

Then allow me to show you the door, Vipul, and I suggest you step lively lest the door hit you on the South 40....

>Show Walsh codes or Turbo codes as numbers running across.
>Have
>> a bunch of waveforms, etc.

>These things are meaningless to someone who hasn't studied them. How would
>it then intrigue a prospective ham when they don't know what they are?

Of course they wouldn't know. They would assume these are the advanced methods and be interested to learn more. Also, showing waveforms tends to get people interested.

On the other hand if the keyers are shown, some won't know what they are. Many will recognize them as Morse code keyers
and see that "amateur" radio is not that advanced. Those that did not know they are Morse code keyers will ask and then be disappointed.

>To the non-ham, they wouldn't be able to tell the difference between
>microwave equipment and other radio equipment.

True. A moving title, in the ad, saying "Microwave equipment", "Amplifier tuning", etc. would help those to know whats there.

Also, with the advanced test equipment shown, with waveforms shown, people would be interested to learn more.

>Why do repeaters last longer? Simple. There are many IND
ENDENT repeaters.
>If one goes down, the others are still accessible. With cell phones, if one

Part of a news release from ARRL:

NEWINGTON, Conn., February 7, 2003 -- Amateur Radio Emergency Service
(ARES) members, Radio Amateur Civil Emergency Service (RACES) members,
and other ham radio volunteers have been assisting federal, state and
local officials and service agencies in the search for debris from the
shuttle Columbia.

"Ham radio has proven to be the only reliable communications option
during the recovery effort," said Tim Lewallen, a North Texas Public
Information Officer for ARRL, the national association for Amateur
Radio. "The area's dense forests and hilly terrain make communication
via many traditional radio systems difficult."

Authorities have requested that every survey team have at least one
Amateur Radio operator with them so the recovery efforts remain
coordinated and organized. Along with volunteering their communications
expertise, ham radio operators were also involved in the debris
cataloging effort early on. <therest snipped for brevity>

diss that.

>>Hmm, I might do such a thing if I were trying to appeal to a broad
>>
>>>>range of interests.
>>>

I've been looking at waveforms forever. They don't strike me as latest
and greatest.

> There actually was something at a Hamfest/Convention. A setup was there where
> someone used a network analyzer and some patch antennas. This kind of stuff is
> <rarely> there. (It is usually the exception, not the rule at Hamfests). This
> is the stuff that should be mentioned in ad, not Morse code keyers.

What will communicate microwave to an interested onlooker?
What will communicate a network analyzer to an interested onlooker?
You probably haven't been involved in much advertizing work. What is
needed are icons, which serve to communicate whole concepts to people.
Yes, it is a sort of stereotyping. A telegraph key says "Ameteur radio"
to people instantly. Other icons are also used, such as antennas, some
times with goofy lightning bolts emanating from them, microphones and
headsets coming out of boxes, etc. It must be simple, iconic and direct.

It's kind of like how you stereotype hams as obese, nerdy and socially
awkward, except it's used in a positive fashion.

> Or show people using microwave equipment. Show radio amateurs using them.

See above.

When I first joined Amateur Radio, I stuck up a regualar lunch time QSO on 40 meter CW with a fellow in Akron, OH. Had a great time, learned a lot, and he was very patient with my fledgling skills.

When a local hamfest was approaching I asked if he'd be attending and could we meet. He said he intended to and that I should look for his call on his ballcap.

We met.

I first saw him in a wheelchair being pushed by an "older" woman (30-ish.??) woman. He was wearing black glasses. I was shocked at first, and was even MORE shocked when I approached and addressed him by name. The girl pushing him told me I'd either have to do sign language in his hand or tap Morse Code in his palm!

He had been a US Marine in the Solomons when a Japanese mortar round landed only inches away from his position. He lost his sight immediately, the hearing followed within a year.

You would have never known it on CW. On CW, he was at-liberty to "chat" as anyone else. He "copied" code by resting his fingers on the cone of a large speaker set on the desk.

Yes, Vipul, Morse Code DOES have the ability to provide "freedom" for many "disabled" persons.

I suggest you refer to "Handi-Hams" for far more examples than my one, Vipul...A LOT more...

This is beautiful. All amateurs share one frequency. Please check out
http://www.geocities.com/d_fravel/rlist.html
You will see a *ton* of frequencies/repeaters in the Rochester, NY, area covering from 29 MHz to 1.2 GHz. There is digital information, fast-scan television, and a whole slew of FM repeaters - many of them linked. You can be on 1.2 GHz and be using the 29 MHz repeater and talking to Australia (I've done it from one of the 440 ports). I wouldn't suggest that amateur repeaters are bigger and better than the cell phone towers - but there are some that are solar/wind powered, many have generators, and really bad storms tend to take the large stuff down pretty quickly. Do check the link and explain how all we have is one frequency. Of course, if the phone lines are up, it doesn't matter (then again, a lot of these repeaters are on IRLP).

Emergency power is necessary .... here is another link ..
http://www.frontiernet.net/~mje/n2hjd.htm
You might possibly gather that some of the repeaters are a bit more complex
and likely a bit sturdier than you think amateur repeaters are.

I'm sorry Putz but after I got two seconds into your repetitive rant
and realized how off-topic it was I skimmed the rest in another two
seconds flat. I still am on topic Putz, To be repetitive myself Morse
is still heavily used in the ham bands 24 hours per day 365 days per
year across the spectrum from 1.8 to at least 145Mhz. And beyond that
yes, of course Morse is a language. Where on earth did you get the
silly notion that it isn't?

Incorrect. I could have operated at any time. If caught operating,
especially after having asked for permission and being denied, I'd have
had to suffer the consequences. If not caught, I could have just
claimed that my commander gave me verbal permission.

Speaking of fish without a bicycle, when the World Trade Center got hit, I couldn't connect with my ISP for a week. Seems AT&T had a lot of "stuff" running through New York. Rochester was severely impacted as far as AT&T internet. Let a minor quake (nothing of consequence, just enough to rattle the china) hit and 911 lights right up with really intelligent information such as "we just got hit by an earthquake (no kidding)" or "did we just have an earthquake?". You'd be surprised how quickly a system with a heavy infrastructure can be brought down in a hurry.

73 from Rochester, NY
Jim

>

In a real emergency and I will use my own area as an example, there is a good chance that the same thing that took out emergency services communication towers as well as possibly cell phone towers. A high wind/severe thunderstorm/tornadic activity is the MOST possible impending danger to our community in which I live.

Other than that the only other major threat identified is Dow Chemical/Dow Corning which are both based out of this county. From inside sources there is enough of the right *2* or *3* chemicals in those plants, and if accidentally or intentionally mixed could level Midland County, as well as at least 1-2 counties in each direction as well.

Granted we have at least a dozen repeaters in our area that can be reached with a 5 watt HT, but even those would be overloaded I am sure, if we ever have a catastrophic level event.....

The hopes would be, to have plenty of operators with "base" station setups with healthy antenna systems that would allow good use of the simplex frequencies. There are some guys around here that have those 75-100 foot towers with the 2meter antenna (as well as others) up that high and they regularly communicate on simplex frequencies with others anywhere from 50-100+ miles away with 5-15 watts. Definitely an improvement over handhelds or mobiles!!

>The World Trade Center disaster.

Incorrect. Putting an emergency coordinating agency IN one
of the WTC buildings was just poor planning.

>The ice storms in some parts of this country this past winter

Sorry, isolated incidents of small communities, not indicative
of non-amateur communications equipment or installations.

>Almost every major hurricane over the last several decades.

Incorrect again.

Try the Northridge Earthquake of 1994 affecting a population
area of 10 million. How was amateur radio directly aiding
anything then?

>Plus amateurs have message relay techniques, if they care to study them,
>that enable them to get messages in and out without a repeater anyway.

Amateur repeaters are coordinated only in frequency for a
specific geographic region.

What amateurs COULD do is not what they DO.

>> Showing Morse code keyers would make those that were interested in the
>> <lastest> communications techniques less interested in amateur radio.
>>
>> >How you going to illustrate the latest techniques?
>>
>> There are ways. Show Walsh codes or Turbo codes as numbers running across.
>Have

>You show your ignorance about emergency communications. There was an
>excellent article in QST about the major contribution in communications
>support made by the ham radio operators at the World Trade Center disaster
>site.

That's hardly unbiased reporting, isn't it?

"Support" is an ambiguous term there. Compare that to the actual
support given by several of the major communications equipment
suppliers.

>There are emergencies on a regular basis where amateur radio has been
>the only way to get enough communications into and out of an area.

But only in small isolated incidents.

>Why do repeaters last longer? Simple. There are many INDENDENT repeaters.
>If one goes down, the others are still accessible.

How are they coordinated for use? Will and idea?

Amateur repeaters aren't tied into the telecommunications
infrastructure.

You forget the large number of INDEPENDENT non-amateur radio
groupings in communities.

>With cell phones, if one
>tower goes down, you've lost communications in a wide area.

Non-amateur telecommunications is not dependent on
cellular telephone sites. Try educating yourself on the
various non-amateur radio services in your community.

>Also hams can,
>on fairly short notice, dismantle their repeater and move it to a more

>suitable location as was done for the 9/11 disaster.

No faster nor better than commercial telecommunications
providers.

>Even if the repeaters
>are unavailable, many amateur radio operators (you do have to study the
>techniques) also know how to effectively and accurately relay messages from
>one operator to another to get to it's final destination.

That IS the prevailing myth.

Where are the DETAILS of such rapid relay of communications and
how long does it take to get between destinations?

Be factual, not the ambiguous generalities provided by ARRL in
newsletters.

>Cell phone systems and regular phone systems are only designed to handle
>normal traffic loads with only small margins for typical peak usage.

The ENTIRE telephone infrastructure is designed that way, including
the cellular part. This has been known for years.

>They are very short of capacity when major disasters occur.

This is often stated but it overlooks the non-switched telephone
circuits that exist for public safety agencies.

Again, you are overlooking the OTHER radios and radio groupings
in communities all over the USA and its possessions. Before
jumping onto ARRL syncophancy bandwagon and playing those
patriotic tunes, try educating yourself on what other community
agencies have and use during Real Emergencies.

>Phone calls, both
>cellular and regular, were taking over 1/2 hour or more to get through for
>days after the World Trade Centers fell.

Somewhat of an untruth. Telephone calls, either wired or cellular,
either get through on the first dial try or they don't.

The tragic and spectacular WTC attack is NOT typical of "Real
Emergencies." Using that is a fine message-point ploy due to all
the emotionalism.

>When an emergency is declared, the FCC can and does allocate certain
>frequencies for usage during the emergency. Those not involved in those
>communications are required to stay off those frequencies. This was done
>for the 9/11 disaster and is frequently done for hurricanes and has been
>done just this past winter for a major ice storm.

For AMATEUR communications, Dee. There's a lot more radio out
there that is not amateur. Definitely a lot more. Try some personal
education on what exists outside of the sphere of ARRL propaganda.

Begin with SHARES as one example. Do a web search for that
acronym.

>The group handling the communications has procedures to move "traffic" as
>it is called smoothly and effectively. There is a "net control" who directs
>the communications. The other operators can only speak when directed to do
>so by the net control unless an immediate threat to life or limb occurs and
>then there is a procedure to immediately break in and get the critical
>message transmitted.

That is the general procedure done on radio command and control
nets since WW2 days. It wasn't invented by radio amateurs.

>> Amateur radio is not good for:
>> Emergency communications
>
>Amateur radio has proven its worth many times over for emergency
>communications. Time and again they have provided vital emergency
>communications. ARRL, a major organization for amateur radio, makes
>available extensive training courses on emergency preparedness and radio
>procedures.

...and ARRL has a wonderful syncophant as all can see.

>Emergency preparedness groups for the nation, cities, states, and counties
>factor the availability of amateur radio into their emergency plans.

Face the facts, it is a small factor.

In Real Emergencies ANYONE can be drafted into the task.

>They
>know, even if you do not, that neither commercial communications (phones and
>cell phones) nor standard emergency communications (police, fire, etc) have
>the capacity to handle even a medium sized disaster let alone a large scale
>emergency.

Dee, please, no more fairy stories. Amateurs are an aid, a small
band-aid, not a full body cast suitable for traction.

I will cite the week beginning 17 January 1994 in the northern half
of Los Angeles where the entire electric power system was
suddenly cut off to a population area of about 10 million. Did the
radio amateurs suddenly spring into action and Save The Day?

No. The FDs and PDs, public safety folks, the utilities, were all
integrated into emergency planning, organization, and training for
the larger area. FDs and PDs had leased landlines that didn't go
through any central office switching. Radios for all agencies that
worked just fine, as expected, as drilled, as trained...mobile or
from emergency generators.

Major earthquake happening. Did the cell sites fail? No, they have
standby power and the sites still stood. Did the telephone system
fail? No. Those calling IN from outside the area code got through.

Where WERE all those mighty amateur radio minutemen during
the first day of the Northridge Earthquake? Busy reading QST by
candlelight?

>> Amateur radio is good for:
>> International goodwill
>
>And it's also good for international goodwill.

Echo?

97.1 (e) has that. Now go to any Almanac and list all the wars that
have happened all around the world since the end of WW2 in 1945.
All of those wars involved nations that have amateur radio inside their
borders.

Tell us again how amateur radio spread all the "goodwill" that stopped
all that warfare "internationally." Didn't prevent Gulf War 2. Didn't
prevent Gulf War 1. Didn't prevent Iran-Iraq war of 1980-1988. Didn't
stop Haiti, Grenada, or Panama.

Three weeks ago France, Germany, and Russia didn't think much of
the USA and weren't hesitant about saying so. News flash: All of
those countries have amateur radio...as does the USA and UK.

Stay with ARRL propaganda. It is a comfort. It is denial of reality.

I also know people who are doctors, dentists, truck drivers, clerks,
cooks, bakers, plumbers, heavy machine operators, large and
small ship operators and maintainers, vehicle mechanics, pilots,
aircraft maintenance mechanics...all who've been trained to operate
radios as part of their work. Those are also quite capable of destroying
an enemy as part of that work. They are members of the US Army,
USN, USAF, USMC. Men and women, no bar to color or gender or
religious preference. They are all professionals.

Some in here have a hatred and contempt for professionals. Are you
one of those?

Morse has it's place as well as other modes too. Simply a matter of
personal choice of use. Some people want to communicate with their voices
which does not necessarily equate to citizens band, (how a person operates
does however, regardless of mode) and some do not. Some may like the
limited anonymity that non-voice modes offer. Look at morse code or the
computer/digital modes..... no way to know for sure if the person is old or
young. etc with those modes, but voice communications may. Hell, it's not
amateur radio, but look at these newsgroups for example, no way to truly
know much about a person here unless they tell you.

I believe there is a way of sending morse via that type of method described.
As to how to differentiate the dits and dah's in the form of a "tap" I am
not sure, but I know it has been done before. (Something to do with the
speed or "force" of the "tap???") The problem in real life outside the ham
community, is if someone had the idea to send morse code would a non-ham be
able to decode it?? Probably the tapping alone may catch attention. Who
knows.....

Let the Novice class go, if they are not going to bother testing for it. Find a way to urge the current novice ticket holders to take the test that will make the licensed level at least as a tech or tech +. Same way for the Advanced ticket as well. If there is not going to be a test for that one either, the same would apply too.

As far as semantics of naming of the license class, why not make the following apply in the meantime?

Extra Class=1st Class Amateur Radio license
Advanced Class=2nd Class " "
General Class=3rd Class " "
Tech with Code=4th Class
Tech w/o Code=5th Class
Novice Class=6th Class

If there was ever an motivating factor to get that "all-fired" important upgrade, wouldn't this structure kind of allow for motivation for that??

>>The World Trade Center disaster.
>
> Incorrect. Putting an emergency coordinating agency IN one
> of the WTC buildings was just poor planning.

Why?

WHICH "disaster scenario" ever envisioned suicidal maniacs hijacking
innocent civilians in a gassed-up airliner then using it as a modern-day Baka
bomb?

>>The ice storms in some parts of this country this past winter
>
> Sorry, isolated incidents of small communities, not indicative
> of non-amateur communications equipment or installations.

Ice storms are only "isolated incidents" in southern California and most
of the "Gulf Coast" states, Your Nearsightedness.

The REST of the United States still has to deal with ANNUAL ice-storms,
blizzards, tornados and others hazzards of nature.

>>Almost every major hurricane over the last several decades.
>
> Incorrect again.
>
> Try the Northridge Earthquake of 1994 affecting a population
> area of 10 million. How was amateur radio directly aiding
> anything then?

She cites "every major hurricaine" and you immediately jump back to your
"Northridge Earthquake of 1994"...Do YOU have a problem differentiating between
hurricaines and earthquakes, Your Scumminess? If so I can provide some pretty
nice links to weather and geological sites that can help you learn...

>>Plus amateurs have message relay techniques, if they care to study them,
>>that enable them to get messages in and out without a repeater anyway.
>
> Amateur repeaters are coordinated only in frequency for a
> specific geographic region.

Hey Your Putziness...Not every "relay technique" involves a repeater.
Amateurs DO utilize bands other than 2M FM.

Not that YOU'D know...

>What amateurs COULD do is not what they DO.

Again, not that YOU'D know.

>To nearly ALL hams, all microwave equipment except a parabolic
> antenna is meaningless machinery.

So says Lennie the Licenseless. The Lame...The Liar...

Can you, Lennie H, prove that ONE WORD of it was not true?

>"Support" is an ambiguous term there. Compare that to the actual
> support given by several of the major communications equipment
> suppliers.

The "major communications equipment suppliers" did just that...supplied
equipment. ARES supplied people to USE the equiment. People TRAINED in proper
net discipline, "relay techniques" and other techniques in radio communications
as needed.

Unless you can DISPROVE that too?

>>There are emergencies on a regular basis where amateur radio has been
>>the only way to get enough communications into and out of an area.
>
> But only in small isolated incidents.

Uh huh...I remember that little incident involving the flooding of the
interior of the United States not too long ago that displaced tens-of-thousands
of people (who stayed in Red Cross shelters supported by ARES), helped move
hundreds of disaster workers to where they needed to be and provided law
enforcement and fire services in dozens of communities with dispatch/control
capabilities.

>>Why do repeaters last longer? Simple. There are many INDENDENT repeaters.
>>If one goes down, the others are still accessible.
>
> How are they coordinated for use? Will and idea?

Planning and practice. Two skills you are lacking in launching these
tirades, Your Putziness.

>Amateur repeaters aren't tied into the telecommunications
> infrastructure.

That's part of their strength.

If part of the state's 800mHz system craps out mid-state, they're out of
luck.

If the local 2M repeater craps out, I switch repeaters or I go to HF.

>You forget the large number of INDEPENDENT non-amateur radio
> groupings in communities.

REACT...?!?!?

>>With cell phones, if one
>>tower goes down, you've lost communications in a wide area.
>

> That IS the prevailing myth.

Then it's 80+ years of myth, substantiated by accolades in the Federal
Register and reams of "general media" press over thsoe 80 years.

>Where are the DETAILS of such rapid relay of communications and
> how long does it take to get between destinations?

In those same 80+ years you keep trying to ignore, Your Lameness.

>>They are very short of capacity when major disasters occur.
>
> This is often stated but it overlooks the non-switched telephone
> circuits that exist for public safety agencies

And when situations like the WTC or midwest floods occur, taking out ALL wireline or fixed-infrastructure assets in that area?

>Before
> jumping onto ARRL syncophancy bandwagon and playing those
> patriotic tunes, try educating yourself on what other community
> agencies have and use during Real Emergencies.

Lennie, before acting like a complete and utter idiot in a forum where archives are only a mouse-click away, you REALLY ought to ask yourself, "How stupid is this going to make me look?"

>For AMATEUR communications, Dee. There's a lot more radio out
> there that is not amateur. Definitely a lot more. Try some personal
> education on what exists outside of the sphere of ARRL propaganda.

Do some yourself, Lennie.

>Begin with SHARES as one example. Do a web search for that
> acronym.

And while you're at it, Dee, please note that a CONSIDERABLE number of "SHARES" users and supporters are the MARS programs (which require Amateur licensure for it's members), Civil Air Patrol (Amateur licensure not required, but most CAP comm folks are also licensed) and the Coast Guard Auxiliary (same deal as Civil Air Patrol), just to name a few.

Ain't it amazin'...?!?! Them danged "Hams" keep showing up EVERYWHERE!

>That is the general procedure done on radio command and control
> nets since WW2 days. It wasn't invented by radio amateurs.

Just perfected by them.

>ARRL, a major organization for amateur radio, makes
>>available extensive training courses on emergency preparedness and radio
>>procedures.
>
> ...and ARRL has a wonderful syncophant as all can see.

Dee, this is where Jim Miccolis' "profile" (recently plagiarized by Lennie hisself) comes into play.

>>Emergency preparedness groups for the nation, cities, states, and counties
>>factor the availability of amateur radio into their emergency plans.
>
> Face the facts, it is a small factor.

On Lanark Street, perhaps.

>In Real Emergencies ANYONE can be drafted into the task.

Lennie's been sitting by the door, anxiously awaiting the day when the local EMA director says "ALL RETIRED EE'S, TO THE BATCAVE!"

>Dee, please, no more fairy stories.

Dang, Lennie, we were about to ask you the SAME thing.

>Amateurs are an aid, a small
> band-aid, not a full body cast suitable for traction.

And if that small bandaid prevents a major infection from occuring, then what's it's worth, Your Putziness?

>I will cite the week beginning 17 January 1994...(SNIP)

Speaking of myopic...Sheesh, Lennie, ONE event where you CLAIM Amateurs were of no help, and you try to undermine both the HISTORICAL FACTS of Amatuer Radio's contributions, and the ONGOING PROGRAMS the incorporate Amatuer Radio into both local and regional disaster plans.

It DOESN'T WORK!

Contrary to YOUR wishes that it weren't so, most of the people in this forum are smart enough to know the truth.

And the TRUTH is not comimg from you...

>Tell us again how amateur radio spread all the "goodwill" that stopped
> all that warfare "internationally." Didn't prevent Gulf War 2. Didn't
> prevent Gulf War 1. Didn't prevent Iran-Iraq war of 1980-1988. Didn't
> stop Haiti, Grenada, or Panama.

Hmmmmm.....Been the recipient of that "good will" and had a chance ot dish a bit of it out...As an Amateur on Okinawa and in the Phillipines, I got to meet people that I ahd talked with onthe radio.

I sat in their homes...I ahd dinner with them...I shook thier ahnds.

Seemed like "good will" to me.

>Stay with ARRL propaganda. It is a comfort. It is denial of reality.

The "denial of reality" belongs to you, you lying, misleading and deceitful old creep.

Steve, K4YZ

>
> That is mostly untrue.

How? Are there not huge differences between what hams do and what other services do, and in resources?

> In the beginning of radio, on-off codings were
> the only possible means of communication for ALL users.

Reginald Fessenden demonstrated amplitude modulated voice and music transmission in 1906.

> The
> first use of radio was as a COMMUNICATIONS MEDIUM that was
> quicker and more weather-proof than all previous communicatons
> methods.

Incorrect. Radio was neither quicker nor more weather proof than landline telegraph or telephone. It is more subject to the vagaries of transmission than "wire" communications. Radio is also inherently lacking in security compared to "wire" communications because anyone with suitable equipment can often listen to others' radio communications without being detected, while doing so with "wire" communications requires close proximity to the "wire",

The main advantages of early radio were:

- the freedom from the expense and difficulty of installing the wire infrastructure,

- the ability to communicate with mobile and portable installations, particularly ships at sea.

> ALL users of radio used it for communications.

Yeah, radar took a bit longer.
>
> The information being communicated is not related to the method,
> medium, or mode of "morse code."

Incorrect. Often, "the medium is the message". Otherwise all books would use the same fonts in printing, photography would have totally replaced drawing and painting, etc.

Rest of rant snipped. If you can't even get the basic history right, there's no point in wasting time on the rest.

Most of all, Len, you missed the fact that W3RV wrote:

"By the way none of the above has anything to do with code tests."

so all your ranting is anti-code, not anti-test.

Thank you for stating it clearer than I did, Phil.

The point I'm trying to make is that in the case of an unlicensed person, FCC
has to go through the trouble of getting a search warrant just to get a look
inside the premises. They also have the job of finding the alleged violator in
the first place.
>
>>OTOH, when someone applies for an amateur license, they give FCC all

Exactly. FCC also knows (in theory) where all the hams are.

Of course modern DF equipment makes finding a transmitter easier than ever.

Certainly reasonable. Of course it doesn't address the problem of those
freebanders who don;t want to operate legally, no matter how easy the license
requirements.

But you were ordered not to. Doesn't that mean you could not operate
amateur radio?

That's what it means to me, at least.

If caught operating,
> especially after having asked for permission and being denied, I'd have
> had to suffer the consequences. If not caught, I could have just
> claimed that my commander gave me verbal permission.

Didn't your commander deny your request in writing?

Boy you have the rank newbie syndrome written all over your posts.

My youngest daughter is an occupational therapist who worked in the
field of adaptive engineering before she moved into her current
consulting practice. On two occasions when she was in her former mode
she outfitted two extremely disabled patients with the ability to
communicate with their outside worlds with Morse with both the
equipment she cobbled together with the help of an MSEE biomedical
engineer and her training of the patients and their caregivers in the
use of Morse. These were not breakthroughs in OT, it had been done
many times previously.

Don't think for one minute that any of these so-called "Morse
decoders" actually work worth a hoot out on the real-world ham bands.
They don't. They're nothing more than giggles and a way to snipe coin
from those who think they can beat the learning curve with a device.
If you don't believe it try one.

I wasn't ordered not to do anything, Brian. I was notified that my
request was denied.

He certainly did. If I operated and was not caught at it, I could
simply toss the written denial of my request and claim that I had verbal
permission. If I'd been nabbed, I would have suffered the consequences.

> That must be the difference between Vietnam Era vets and the rest.

What is the difference? Service members then requested and received or
were denied written permission to put an amateur radio station on the
air.

Service members now request and receive or are denied written permission
to put an amateur radio station on the air.

The only anomaly seems to be you in Somalia.

To be specific, the Saigon civil airport was named Ton Son Nhat.
The U.S. air base was Ton Son Nhut. Tan Son Hut must be a Nuoc Mam
scented snack bar outside the air field. U.S. military personnel had
nothing to do with Tan Son Nhat.

I was never assigned to a place called "Tan Son Nhat" or a place called
"Tan Son Hut".

Good question Dan. It's not ham radio we dislike, it's the jerks it attracts. You know, the geeks who spent months studying to get licensed and live and breathe ham cuz it's the only thing they're successful at; never mind half the Oakland Hells Angels got tech licenses just by reading Dick Bash's book back when that meant drawing complex circuits. If you don't know who I'm talking about there just might well be a picture of him over your bathroom sink.

Well balanced people enjoy ham radio but it isn't the only thing in our lives; nor is our self esteem based on having passed a test.

Sorry Mike.....
It was an advertisment for local pre-paid cellular dealership.
She reached over and grabbed a Nokia cell phone to call for help.
It was not an HT.

And a lot of fun too I'll wager. I got too focused on emcomms and some
band is always open for ground plane/NVIS within my state (VA) to
remember radio has other useful purposes. Thanks for reminding me.

At a basic level, yes. But there's much more to it than that.
>
> >But ASL and other sign languages
> >are much more than encoding schemes.
>
> Like how?

The way a person makes a sign can say as much as the sign itself.
Fast, slow, formal, informal, exaggerated, minimized. Various facial
expressions can be added. Choice of sign is another element.

I'm no expert at ASL by any stretch of the imagination, but I learned
enough to gain a basic appreciation of its characteristics. While some
signs are based on English words, and of course fingerspelling is the
Roman alphabet, English knowledge is not absolutely necessary to have
an understanding of ASL.

> ----------
> Also note, there is a need for sign language. It is used to communicate for
> handicapped people.

It was developed by/for deaf people, yes. But it can enhance the life
of anyone who learns to use it. There have been situations where I
have used ASL to communicate where all parties to the communication
have 'normal' hearing. I know elementary school teachers who have
enhanced the education of their students by including ASL, even though
no one in the class was deaf.

One of my longterm goals in life is to improve my ASL skills.

>Morse code has not such use.

INCORRECT.

K4YZ has given one case. There have been other medical situations
where Morse-knowing people have been able to communicate using the

mode when other methods were impractical. Ever been intubated, Vipul?

> Also, hardware can encode and
> decode Morse code symbols so people don't have to.

In some cases, yes. By that same line of thought, deaf people could just write everything down or use little keyboard/display devices. But it's not the same thing.

As W3RV wrote, none of this is about any test. It's about having another tool in the toolbox.

There's even more to it, guys.

The number of circuits telephone companies provide is based on average usage. In an emergency these are quickly overloaded by people checking on friends and family; so massively overloaded that the system crashes. Normally, the cell system is so good that many police, fire and rescue units have leased private "lines" on it and sold off their old repeaters (I bought one). These private cell lines also quit working when the system crashes. I was told that's what happened in the 9/11 disasters, not the loss of towers. Other nearby towers would "take over" were it not for the overload.

The "old fashioned" repeaters amateurs, and some emergency services, still use are uneffected by this phenomena. Their capability may seem puny compared to the cell system but they have proven capable of handling emergency traffic when their big brother has a stroke.

Cell phone or ARS? Be safe, have both!

Just for the hell of it ya Putz I called your bluff and did just that.
A few dozen posts going back to 1996. The vast majority haven't drawn
a response yet. Many were your usual long-winded diatribes which
wandered all over like you do here when you're trying to be
"impressive". Ya oughta slap a patent on the technique and sell it as
a cure for insomnia. Several posts were characteristically
antagonistic. One guy brushed you off as a lurker. Looked to me like
those guys are much more interested in Avery labels than they are in
Avery Fineman. Yeah, you're a real dot hombrew "hero" all righty. No
surprise either, you is what we all know you is.

> >Being the radio "engineering professional" he'd like
> >the snooker the world into thinking he is.
>

You'll be a "professional" when garbage collectors are considered
professionals.

> Kellie is welcome to question any of the references I've
> provided in here. He doesn't dare for he will be proven wrong
> in his loud-mouth name-calling.

You play the same game in dot hombrew, you try to pass yourself off as
an engineer. Which you are not. We all know that anybody who does not
have an accredited engineering degree is not an engineer except in
extraordinary cases. While you certainly qualify as an extraordinary

case your problem has nothing to do with your status as an electronics bench tech attempting to misrepresent yourself as an engineer. I noticed that Dick dumped a post into dot homebrew which pointedly clarified your status as a non-ham, ya tried, fuhgeddit again, everybody has your number.

> >> At least *it* is still useful *somewhere*

> of his other age-related ailments.

You're just plain fulla shit. You've dropped all the way back into your child mode again. Unless there is some freak solar disturbance underway there is no time 24/365 that two-way Morse communications are not audible given any half-baked HF receiver with a BFO and a wire tossed out a window.

> >Maybe he is actually useful to somebody somewhere, maybe he hauls the

Hmmm...I thought this thread was about "Max Morse Speed" as
indicated in the Subject line of the header.

No, it all about the ego and personality of a long message writer
who makes many statements about US foreign policy, US military
warfare doctrine and tactics, and how he is always right no matter
what. :-)

No matter what job, educational level, employer, or
government/military service that any newsgroup opponent has,
if said opponent fails to honor and revere Robeson's views, they
will be the target of Robeson's arrogant insults, ridicule, name-
calling, put-downs, denigrations, and gross exaggerations of
Robeson's self-importance and experience...plus the typos
done in anger in emotion-laden "replies"...not to mention puerile
bigotry and sexual-connotation comments.

Impossible...statements by ARRL are sacrosanct.

Anything said against ARRL is heresy and irreligious.

:-)

>field of adaptive engineering before she moved into her current
>consulting practice.

Good message-point slam-dunk, Kellie!

Anything anyone says from this point on is taken as a "personal insult" to your daughter!

>On two occasions when she was in her former mode
>she outfitted two extremely disabled patients with the ability to
>communicate with their outside worlds with Morse with both the
>equipment she cobbled together with the help of an MSEE biomedical
>engineer and her training of the patients and their caregivers in the
>use of Morse. These were not breakthroughs in OT, it had been done
>many times previously.

How many "times?" "Lots?"

Is that any kind of quantification like all those "26 patents" that boiled down to just ONE?

>Don't think for one minute that any of these so-called "Morse
>decoders" actually work worth a hoot out on the real-world ham bands.
>They don't. They're nothing more than giggles and a way to snipe coin
>from those who think they can beat the learning curve with a device.
>If you don't believe it try one.

I once did that...written by a programmer friend who wrote a program as an intellectual exercise, a hobby project. Worked fine.

But...Real Hams work DX on HF with CW.

Still incorrect for today.

No matter what job, educational level, employer, or
government/military service that any newsgroup opponent has,
if said opponent fails to honor and revere Robeson's views, they
will be the target of Robeson's arrogant insults, ridicule, name-
calling, put-downs, denigrations, and gross exaggerations of
Robeson's self-importance and experience...plus the typos
done in anger in emotion-laden "replies"...not to mention puerile
bigotry and sexual-connotation comments.

Len> Incorrect. Putting an emergency coordinating agency IN one of
Len> the WTC buildings was just poor planning.

Steve> Why?

Steve> WHICH "disaster scenario" ever envisioned suicidal maniacs
Steve> hijacking innocent civilians in a gassed-up airliner then using
Steve> it as a modern-day Baka bomb?

On September 10th, 2001, I had lunch with a coworker in the company cafeteria. I was talking to the coworker about my concerns with respect to disaster recovery -- my latest project. The office is directly under the final approach for two of SFO's runways, and a passenger jet went overhead. We pondered what would happen if the jet were a bit too low on its approach and determined that our company would probably have ended up closing its doors for good within the year. The ending of one of Tom Clancy's novels came up during that part of the conversation as well.

If I could think of it, and if Tom Clancy could think of it, then disaster planners could think of it. But most people (hams and others) tend to follow the path of least resistance and hope for the best. I don't feel bad for companies in one tower who stored their off-site backups in the other tower -- that is bad planning and shows a lack of foresight. People who work on disaster-related issues like disaster recovery and emergency services need to plan for the worst and then revisit their plans regularly to see if their worst case is sufficiently bad.

My amateur radio skills are insufficiently developed -- regardless of my license -- for me to serve effective as part of an emergency team. I am working on developing my skills to where I can provide valuable assistance to a local organization. My schedule's a little crazy right now, but I plan on taking the ARRL EMCOM courses over the next six months and talking to some of the local folks at Field Day to see if I can find an elmer to help me improve.

Jack.

>No matter what job, educational level...(SNIP)

That's thirteen today. Makes it an even 30 for two days "work".
Plagiarism cuts down on the overhead, I guess...

I think Lennie has sufficiently demonstrated the kinda stuff his "career"
was made of, and the kinda stuff we could expect him to "contribute" if he were
in the Amateur Radio service.

Thank God for small favors, eh?

Another day...another opportunity to lie and steal others works.

No doubt the culmination of a decades-long "career" of doing the same
thing in electronics.

I wonder whose work he probably plagiarized for his columns in "Ham
Radio"...?!?!

Other than the fourteenth use of the same plagiarized "profile" snippet, I see you had nothing to offer in rebuttal to the post or my assertions.

Nothing original. Nothing we haven't heard over and over and over and....

Doesn't bother me a bit, Len. I've worked in places where cussing was
an art form. Your skill at it would not even qualify as entry-level.

However, I don't think such language is appropriate in an amateur
radio newsgroup, so I edit it out when encountered. Unlike you, I do
not measure someone's maturity or masculinity by how many profane
words they produce.

> >He's had lots of practice calling people he's never met "boy". Do you think
> >he would try that in person? Probably not - too much FEAR.

Contradiction in terms, Len.

> I'll call you anything in-person, face-to-face, that I care to call you.
> No "fear" at all.

Big brave words from a continent away. Your very lame attempt to
incite another to anger is noted.
>
> You don't know what "REMF" stands for, do you?

Sure.

Note that I have not called anyone an "REMF". Not even you, Len.

> boiled down to just ONE?

Putzie 'Ole Bean, if you're gonna continue in your role as the RRAP
bufoon you really do need to come up with new material at least once
in awhile. Ya wore that one out years ago. It was two related patents
Putz, you missed one.

> >Don't think for one minute that any of these so-called "Morse

Bullshit. Try using it to copy a Morse station 300Hz away from another Morse station which is 20dB stronger in a band with any noise content. Piece of cake by ear, dismal failure with a "decoder". Been there Putz so cut yer shit.

>
> But...Real Hams work DX on HF with CW.

Welp then I guess I'm just not a real ham since I have an SSB DXCC.

But that would be illegal operation and unethical action on your part.
Why would you even think it?

> > That must be the difference between Vietnam Era vets and the rest.
>
> What is the difference? Service members then requested and received or
> were denied written permission to put an amateur radio station on the

Exactly. Your operation was denied. Mine was permitted. But you say
you would have operated anyway and disposed of your written order not
to operate, then lie about it. I think that's the difference between
you and me.

> Service members now request and receive or are denied written permission
> to put an amateur radio station on the air.
>
> The only anomaly seems to be you in Somalia.

Permission was granted.

No anomaly. No destroyed paperwork. No lies.

You must have belonged to a different ethical era.

here is the official way to report stuff like this:

FCC CONSUMER ALERT

Federal Communications Commission

Consumer and Governmental Affairs Bureau

445 12th Street, SW Washington, DC 20554

1-888-CALL-FCC (voice)

1-888-835-5322 (TTY)

www.fcc.gov/cgb

UNAUTHORIZED EQUIPMENT SOLD ON INTERNET AND IN PUBLICATIONS

The Federal Communications Commission receives hundreds of complaints about
alleged illegal (non-FCC certified) equipment being offered for sale on the
Internet or in publications. The Commission is monitoring this situation
carefully and requests your assistance. If you have any information about
illegal or uncertified equipment being offered for sale, please forward it
to the FCC. Useful information for the FCC includes:

* An original advertisement or Web address where the illegal equipment is

being advertised or offered for sale with the types of equipment about which

the allegations are being made, highlighted.

* If it is a Web-auction we will need the name of the auction site, the
exact

item number, and auction opening and closing dates.

* Name and address of the individual or business offering the item(s) for
sale.

* Complainant's name and telephone number in the event follow-up is necessary.

This information can remain confidential, if requested.

* Specifically, why you think the equipment is not in compliance with FCC rules.

* Number of pieces or types of equipment about which the allegations are being

made (one piece, five pieces, how many models, etc.).

Information can be mailed to the FCC at the address below or e-mailed to fccinfo@fcc.gov.

###

To receive information on this and other FCC consumer topics through the

Commission's electronic subscriber service, click on

Thats what I was saying. It could have been part of an ad for something else.
The person said he did not see the whole ad.
Don't assume the ad is for amateur radio. I've never seen an amateur radio ad
on tv, so I would not assume the ad was for amateur radio.

Here's some more light on the subject(s)at hand:

"The term CW, short for Continuous Wave is a little misleading. A
continuous wave is normally a 'carrier on' situation, with no
modulation present on the carrier. Voice is for instance a carrier
modulated signal. The continuous wave signal is keyed in an 'on and
off' in the rhythm of the morse code. Some use the term CW meaning
sending the Morse code. Others call it just Morse. CW or Morse is
considered to be - don't be shocked - a fuzzy mode <fuzzy_modes.htm>.
It is not coded, rather it is a natural language. The signal is read
from the receiver without any change to time of arrival of data or
content of data. Computer reception of Morse, which requires
electronic decisions, must always perform worse than a human expert.
If you can handle Morse and have tried out one or more of the
available Morse decoders you know that this is true. Another reason
that the human 'interface' is quite superior to the different Morse
decoders is that the brain, when receiving Morse, can also filter out
the required signal amidst a number of other Morse transmissions,
often having a different pitch."

> Everything Vshah101 dislikes (which is all other aspects) is ham radio.

No, there are others, some who are not EEs, who share my opinion.

Ham radio is the unrequired conventions, unneeded codewords, etc.

Hams focus on antennas, working all states, collecting wallpaper, DX, CW.

They tend to view radio as a culture, such as the shortwave, CB, etc. They
define "true" Hams.

There are many more examples.

>That is one person's opinion. There are other people with equal credentials
>that believe just the opposite.

I did not cite the Prof. I only assume because of class topic coverage.

>you don't have the background to evaluate the relevancy of Morse code.

Others do have the background. The studies have been done. Others have methodically evaluated modulation schemes. Your biased view cannot see that.

>But one can use that argument in reverse. Inside the circus (Ham radio),
>juggling (Morse code) is very useful.

Morse code is not useful. It is only used because Hams agree to use it.

>It has become quite apparent that you are only interested
>in electronics. Therefore amateur radio probably isn't for you.

No, I like the practical aspects also.

Thats how a typical HAM would denfine amateur radio - as something not involving electronics.

>I know doctors, lawyers, truck drivers, engineers, and people in just about
>every career you can name who are amateur radio operators and that's the way
>it was intended to be and should be.

Amateur radio has use for emergency communications, worldwide communications, personal communications, etc. Also, many (non-EEs) become skilled with antennas. I have no problem with non EEs joining amateur radio.

> Some in here have a hatred and contempt for professionals. Are you
> one of those?

I don't know about contempt. But, I have seen disinterest at Ham radio meetings and Hamfests.

If an EE asked me about Ham radio, I would say it's not worth it. The exception would be if they were already into antennas as a hobby. For them, I would recommend Ham radio.

I got a better idea...lets all go to Phasing SSB generation. Only suppress
the carrier about 20db. And operate on Double Side Band.

Wouldnt that act similar?

From K4YZ:

> I doubt your "profs" have a clue about anything beyond the theoretical, if
>you are the end result of thier endeavors.

That could be true of some Profs. Not true of Comm Theory Prof. and Antenna Theory and Design Prof.. Both have worked in industry in their specialty before becoming Prof..

>It IS an achievement, Vippy. ALL learning is an achievement. Even for
>you.

Morse is built up to be some kind of VERY important skill. Its importance is exaggerated.

>>Even real emergency comm skills would be more useful than Morse
>>code.
>
> What "emergency comm skills" SUFFER because of one's proficiency with
>Morse Code,

I'd rather learn several modes than just Morse code. The focus at clubs seem to be out of proportion to just Morse code.

> It is USEFUL to anyone who makes a contact with another Amateur Radio
>station. No "agreements" need be made.

Morse can be useful in some situations, such as low power. The people who claim Morse is good for low power and can be easily assembled often don't homebrew. Most Hams use it for fun.

Hams like to use it for fun, so they agree to use it. Its use is highly due to the "fun" aspect, not the usefulness aspect. Another mode can also be used most of the time.

>"Vipul Shah cannot learn Morse Code".
> See...I said it. Can you prove me wrong?

You will not accept anything other than passing the Morse code test as proof that I can do Morse code. So, it makes no sense to argue that.

>>And relative has discouraged me from going to Hamfests and told me that Hams
>>are old, often non EE people.

> (Are you getting the drift on just how bigoted that comment of YOURS
>sounded, Vippy?)
>

Except, if it was not true, I could argue with them. If I found something useful to me, I could say its useful to me.

On this one I'd have to agree.

Just because we CAN go "narrower", does it mean we HAVE to?

It's supposed to be about experiementing. Isn't that what this is?

On the otherhand, if they are conducting thier "net" on two or more frequencies in order to intentionally take up spectrum, then enforcement is proper.

Otherwise, why no "letters" to the guys who operate AM on 75?

73

>Others do have the background. The studies have been done. Others have
>methodically evaluated modulation schemes. Your biased view cannot see that.

By "biased view", you mean "practical experience"...?!?!

>>But one can use that argument in reverse. Inside the circus (Ham radio),
>>juggling (Morse code) is very useful.
>
>Morse code is not useful. It is only used because Hams agree to use it.

It IS useful. It permits persons who do not share a common language to
communicate. Until a "universal translator" the likes of TV's "Star Trek"
series is invented, it will have to do...

>>It has become quite apparent that you are only interested
>>in electronics. Therefore amateur radio probably isn't for you.
>
>No, I like the practical aspects also.

Obviously not, or you'd like Morse Code too, since it's one of the MOST
practical things in Amateur Radio.

>Thats how a typical HAM would denfine amateur radio - as something not
>involving electronics.

OK, Vippy...You are quickly assimilating Lennies traits...We will ask you
to please cite where Dee said Amateur Radio is something that does NOT involve
electronics.

>Amateur radio has use for emergency communications, worldwide communications,
>personal communications, etc. Also, many (non-EEs) become skilled with
>antennas. I have no problem with non EEs joining amateur radio.

Obviously you do since you've made several posts in the last few days
about NOT associating with "non-EE's".

>If an EE asked me about Ham radio, I would say it's not worth it.

You change your stroy faster than you change underwear, Lennie...oooops, I mean Vipul.

Are you NOW stating that you do NOT support Amateur Radio? You have made several posts in which you very specifically stated that you "support Amatuer Radio in non-Amateur forums".

>The
>exception would be if they were already into antennas as a hobby. For them, I
>would recommend Ham radio.

Why? They can experiment with antennas without any kind of license at all, Vippy...If they absolutely MUST be able to generate RF, they can resort to Part 15, Part 95, or take out an "Experiemental" license without any testing or social affiliations of ANY kind.

Why, even YOU could do THAT, Vippy!

Steve, K4YZ

>> >Show Walsh codes or Turbo codes as numbers running across.
>> >Have
>> >> a bunch of waveforms, etc.

>To non-technical types, they will merely look like op-art having no
>relationship to radios or communications.

Turbo codes probably will have no effect, or bad effect, from an advertising point of view. They might see it as too technical for them. Waveforms might get people interested.

>I seriously doubt that they would be disappointed. Most people expect both
>old and new elements to be maintained in hobbies.

Okay, but the words should match the pictures. Latest methods does not match Morse code.

>A moving title, in the ad, saying "Microwave equipment", "Amplifier
>> tuning", etc. would help those to know whats there.
>
>Again, won't mean much to a non-tech type.
>They will think of ovens.

Moving titles will make it clear whats being shown. This is often done in ads - It gets people interested.

Also, show Hams in communications, group, and fun social activities - to leave the impression of popular hobby.

Hey Dee...just give them a toke of pot, a shot of whiskey, sit them down in front of an O-scope and fill out an FCC Form 605 while they are gazing into the waveform!

>> On the other hand if the keyers are shown, some won't know what they are.

Oh NO! Absolutely NOT! As soon as someone invents something new we must ALL immediately destroy all of our now "antiquated" gear and embrace the new technology.

YOU WILL BE ASSILIMILATED!

RESISTANCE IS FUTILE!

>> True. A moving title, in the ad, saying "Microwave equipment", "Amplifier
>> tuning", etc. would help those to know whats there.
>
>Again, won't mean much to a non-tech type. They will think of ovens.

Or some rock-and-roll type tapping on a mic, saying "Ampliier check...1-2-3...Mic check...1-2-3..."

>exaggerated.

By whom? Where? In what regulation?

>> What "emergency comm skills" SUFFER because of one's proficiency with
>>Morse Code,
>
>I'd rather learn several modes than just Morse code. The focus at clubs seem
>to
>be out of proportion to just Morse code.

Oh? In WHAT clubs, Vipul?

>Morse can be useful in some situations, such as low power. The people who
>claim
>Morse is good for low power and can be easily assembled often don't homebrew.
>Most Hams use it for fun.

There are about a dozen national and international QRP clubs that would
disagree with you, Vippy. "Homebrewing" is very important to them. And I
point out that QRP is NOT "just CW".

>Hams like to use it for fun, so they agree to use it. Its use is highly due
>to
>the "fun" aspect, not the usefulness aspect. Another mode can also be used
>most
>of the time.

Perhaps, but if that other mode doesn't meet the criteria for the
application intended, what good is it?

>>"Vipul Shah cannot learn Morse Code".
>> See...I said it. Can you prove me wrong?
>
>You will not accept anything other than passing the Morse code test as proof
>that I can do Morse code. So, it makes no sense to argue that.

You said no one could say it. I DID say it and proved you wrong. No
arguement. You cannot or will not prove me wrong.

And I CAN accept any other example as proof (other than taking the VE
test)...For example when you feel you have mastered the Code, I will come to MA

and watch you employ Morse Code without the use of any interpretive devices.
No test needed...Just let's see you use it.

>Except, if it was not true, I could argue with them. If I found something
>useful to me, I could say its useful to me.

But WAIT, Vipul! You've spent many months in here saying Morse Code is
NOT useful to Amateur Radio in general.

You have been provided with countless examples of why it IS useful.

NOW you state tHAt something IS useful, but only if it is useful to
YOU...?!?!

BBWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! !

WHAT A JOKER!

Nope. Tried the other digital modes a few years back, found it boring, and
thus have never bothered to hook it up with the later computers and radios
that I got.

There conventions and words are needed to facilitate communication in this
unique field. EVERY activity has its own unique vocabulary. This is part
of amateur radio

>
> Hams focus on antennas, working all states, collecting wallpaper, DX, CW.
>

These are all elements of amateur radio and do not exclude any of the other
elements. Our club for example, provides public service communications to
half a dozen events (like walk-a-thons) annually.

> They tend to view radio as a culture, such as the shortwave, CB, etc. They
> define "true" Hams.

No the true Hams embrace all members of the amateur service and celebrate
the diversity of the Ham community.

The "many more" examples that you think you could cite won't due as they
would just emphasize the wide ranging diversity of amateur (ham radio) and
show its breadth and depth of activities and capabilities.

>Are you NOW stating that you do NOT support Amateur Radio? You have made
>several posts in which you very specifically stated that you "support Amatuer
>Radio in non-Amateur forums".

I support amatuer radio in that I mentioned a Hamfest to a non-Ham, I loaned someone my ARRL handbook, I mentioned to some people that I am a Ham.

I happened to be in those situations. That is the scope. In those cases I did support amateur radio. I will not go out of my way to support amateur radio.

If an EE asked me about Ham radio, I would say its not worth it, because thats what I believe.

>
>>The
>>exception would be if they were already into antennas as a hobby. For them,
>I

>
> Why? They can experiment with antennas without any kind of license at
>all,

True, they can do that. But, if a person has this interest, they truly would benefit from Ham radio. In the area of antennas, Hams do share their knowledge, so someone interested in that probably would benefit from that.

By the way, I got "the call" a few minutes ago today. It seems I did not make my deadline that was due at the end of this month. I did not obtain enough experience to continue, and cannot afford more courses. So, I may not be an EE (forget rf specialty, which I was not working in) anymore.

I most likely will be changing into a more stable, higher paying, less "glamorous" (non-EE) field pretty soon. I would still like to learn as much as I can about emergency comm, use of certain modes, etc. Learning about circuit design now would be pointless. I will probably keep my amateur radio hobby membership and build <simple> circuits for fun.

that.

Ok cite the name and author of the published study and I'll go read it and
report back. Remember that the invention of the typewriter and later the
word processor did not eliminate the need for pencil and paper and teaching
the skill of handwriting.

>
> >But one can use that argument in reverse. Inside the circus (Ham radio),

> involving electronics.

Wrong. Hams definition of amateur radio does not exclude electronics but
instead covers all aspects of the hobby. Not every amateur is going to have
the time, money or interest to participate in all aspects of the hobby. As
in ordinary daily life, one must pick and choose what part of the hobby they

are going to focus on.

But you want everyone to become an electronics expert when that's not the
be-all and end-all of amateur radio.

How do can you give them whiskey in a TELEVISION ad. This is what we are
talking about.

> YOU WILL BE ASSILIMILATED!
> RESISTANCE IS FUTILE!

This seems the attitude of those that love Morse code.

>>> True. A moving title, in the ad, saying "Microwave equipment", "Amplifier
>>> tuning", etc. would help those to know whats there.
>>
>>Again, won't mean much to a non-tech type. They will think of ovens.
>
> Or some rock-and-roll type tapping on a mic, saying "Ampliier
>check...1-2-3...Mic check...1-2-3..."
>

Moving titles work as an advertising method. I have seen this in other ads.
They clarify whats being show, so someone wont confuse it for a "Mic check".
They increase interest and thats why they are used.

How can you possibly make such a judgement for another person? The EE may very well have a multitude of interests that would fit very nicely with ham radio. There is everything from homebrew to digital communications to the development of new modes. And that's just a bare sampling of the technical aspect. Then of course there is the community service aspect. How can you assume that a EE would not be interested?

You are continuing to limit other people's interests and activities to those that you think they should care about.

..and you can offer what as proof of your claim?

> No anomaly. No destroyed paperwork. No lies.

We have no way of knowing what took place. You have nothing to back
your statements.

> You must have belonged to a different ethical era.

That what you stated earlier. Then again, you have no way of backing
any of your statements. Tough luck, kid.

So what is your assessment, Mr. Shah? Should the building have been
abandoned? Do you ever intend to present a tale which has the
possibility of a plausable outcome?

Dan, Dan, Dan ...

Question: Is phasing worse? Are you sure? Carrier suppression wouldn't be nearly as important as unwanted sideband suppression. Check out some of the QST articles over the past few years. The reality may well be that with digital processing, that quadrature phasing may well be held more tightly with DSP than with analog components. The RF quadrature (at least for one frequency, or a small frequency spread) would be easy. It may turn out that we could get better suppression with phasing. Then again, the two methods might just be combined. Folks who think they have a broadcasting license and want to pass 10 KHz audio are simply out on a weekend pass. The Friendly Candy Company will reel them back in, in time. Just a thought :)

Sadly, I do not have a tale with a plausable outcome. Its easy for me to say this afterward. Not so easy to do. This event emphacizes the need for emergency preparedness.

I didn't quite get that statement, either.

If there was problems with carrier suppresion in old rigs, it was due
to the tubes (and their warm-up time) rather than whether the rig
was phasing or filter. Sure, a filter rig places the carrier
on the slope of the filter, but a balanced modulator should be
able to get rid of enough carrier, given enough care.

Looking at schematics of phasing rigs, most of them had low
pass filters in the audio chain. It was there to limit
bandwidth, and likely to put less requirements on the audio
phase shift network. If the PSN only had to see a limited bandwidth,
it did not have to be as broadband.

Except for in recent years, phasing was pretty much dead forty years
ago, and definitely by thirty years ago. That was a whole different
time ago. Likely harder to get precision components, and few had
the test equipment the average ham has now to match components.
So really simple PSN's were used. They used tubes, and likely
that made some problems with getting good balance, because of
the size of the components.

The phasing rigs of today are more complicated, taking advantage
of recent advances, and likely are better than those simple
phasing rigs of the fifties.

Why not this:
Extra = 1st. Advanced OR General = 2nd. Tech (all kinds) = 3rd.
Novice - NO RENEWALS. Eliminate HF for Tech+

Now THAT will get them to upgrade! :-)

Not at all, Dave. One cannot lose what one never had in the first place.

Perhaps we should all go back to ignoring him. Spring is here, antenna work beckons, new rigs to build and check out. Hamfest season, too. Field Day is just two months away.

I'll have to wait for the high winds to die down in r.r.a.p. and here on
the hilltop.

> ...new rigs to build and check out. Hamfest season, too.

I enjoy hitting the smaller hamfests in eastern Ohio, West Virginia and
in western PA. I'm going to go to the Breezeshooters hamfest in Butler,
PA in June.

> Field Day is
> just two months away.

The local ARES group wanted N8NN and I to join their effort but I think
Bert wants to do another two op effort from out here on the hilltop.
That puts us only 600 feet away from the kitchen, beds and a shower.
We'll likely use his call this year since we used mine last year. We'll
use his Yaesu "Field" once again as the Orion is staying safely indoors.

In this vein and as a dxer I've worked piles of non-English speaking hams over a lotta years Dee. I can stumble thru bits of spoken French & a bit more Spanish but it's no fun at all on phone as far as I'm concerned and I'm completely out of luck when I run into Russians for instance. Working the same stations with Morse is far easier/faster/more accurate because of the worldwide standardized phrases, Q-signals and abbreviations used by Morse ops. The transmission of "UR 589 QSB QRM OM"is 100% decipherable by all Morse ops globally without translation into any native languages. Another good reason to be a "multilingual" U.S. ham, speak English and Morse .
.

Check out his comments to the FCC on 98-143. ECFS page on FCC website. The mighty professional had to send FCC paper copies and a disk because he couldn't figger out how to send them electronically. Also waited until the very last minute before the January 15 deadline, effectively cutting off reply comments before the deadline.

Then they would be communicating in French, not a unique language.

Morse is an encoding scheme, not a language. And its not digital either.

This is one reason I took to posting on rrap - to dismiss all these
Morse Myths. Where is Aaron Jones when you need him?

Perhaps the Q-siganls are universally understood, but Q-signals are
not Morse code. I even hear them spoken on fm repeaters and
side-band.

Dave, all of these comments are public. That's how you got to respond
to a comment I directed at DICK. Had they been private, you would not
have been able to read it, and not comment on it. QSL?

Getting back to the snack bar in Vietnam. Why you keep bringing it
up? It must have been a significant part of your life while
in-country.

What did your orders say? Did they put you in a snack bar or an Air
Base?

Wrong again loser. I telecommute (in fact, I'm self-employed and don't have
much of a commute at all).

Let's see if Mr. Teaze can go for "strike 3" and win the idiot hattrick of 2003!

Rec.radio.amateur.spam is more like it.

>able to get rid of enough carrier, given enough care.

I disagree, slightly.

The phasing rigs of the '50s could be stabilized with low-drift components. The main problem seems to have been that even with the best adjustment the unwanted sideband suppression would not be any better than 40 dB. 30 dB was a more realistic figure in practice.
>
>Looking at schematics of phasing rigs, most of them had low
>pass filters in the audio chain. It was there to limit
>bandwidth, and likely to put less requirements on the audio
>phase shift network. If the PSN only had to see a limited bandwidth,
>it did not have to be as broadband.

Agreed. But there's also the fact that for communications purposes 3 kHz is plenty. Many serious SSB DX/contest types use less than 2.5 kHz.
>
>Except for in recent years, phasing was pretty much dead forty years
>ago, and definitely by thirty years ago. That was a whole different

>the test equipment the average ham has now to match components.
>So really simple PSN's were used. They used tubes, and likely
>that made some problems with getting good balance, because of
>the size of the components.
>
Agreed, but the problem was largely dealt with by use of packaged PSNs like the B&W 2Q4/350.

I think what really wiped out the phasing method for hams was the introduction of heterodyne-type SSB transceivers. The first ones were expensive (Cosmophone, KWM-1/KWM-2), but there soon followed much less expensive models such as the NCX-3. These rigs put an entire station (less power supply, antenna, mike and sometimes speaker) into one box. Cost was reduced by the use of only one set of oscillators and one filter.

In theory the same thing could have been done with the phasing method, but the T/R switching would be complex and the unwanted sideband rejection still only 40 dB at best.

>The phasing rigs of today are more complicated, taking advantage
>of recent advances, and likely are better than those simple
>phasing rigs of the fifties.
>
Agreed.

But regardless of method, the wisdom of wideband SSB is debatable.

Kelly, you keep the white sheet for your own ceremonies.

But if you need Len, try Superpages.com.

If you can spell it, it'll pop up.

If you can't spell it, just clip and paste this:

Len Anderson

Or maybe Dick can drop it
> off on him during his pass thru LA. Maybe Dick can also run a gonads
> check while he's there.

DICK is probably quite adept at running "gonads checks." 10-4, GUD BUDDY?

> any of your statements. Tough luck, kid.

You're the one who thought up tossing your orders not to operate, then lie about it. That's the work of a devious mind. And it's all here on rrap.

Prove you didn't operate. If anyone will believe you.

Nor is it likely they will. It was a relatively small operation. Not
many combattants involved, and Willy kept it small. Sort of like a
NEO on a little American Embassy. Happens all the time.

I operated legally. Seems like you're SOL.

Yeah, use the throwaway gear.

I'm planning on running single op from one of my daughters' back yards
out in the far 'burbs. I tried it last year but the 940 went kaput two
contacts after the start. At least I have the lines already in the
trees. And a new radio.

>digital processing, that quadrature phasing may well be held more tightly
>with DSP than with analog components. The RF quadrature (at least for one
>frequency, or a small frequency spread) would be easy. It may turn out that
>we could get better suppression with phasing. Then again, the two methods
>might just be combined.

A breakthrough in broadband single sideband phasing modulation
and demodulation happened with Mike Gingell's PhD thesis in the
UK (1975, University of London Faculty of Engineering), his
"polyphase" network. Gingell is now living the US, has the US
amateur license KN4BS (was N4VQP).

The Gingell network values were refined by Tetsuo Yoshida,
JA1KO, and that can be seen in QEX, June 1995.

RF quadrature generation can be done relatively easy with a
pair of chained flip-flops clocked at four times the local
oscillator frequency. That is done by Dan Tayloe's very low-
insertion-loss mixer (patented) using a CMOS quad switch IC.
The Tayloe Mixer also has very low intermodulation, better
than nearly all conventional diode mixer configurations.

All of those were incorporated into a homebrew HF receiver
designed by Hans Summers, G0UPL, and is described on his
website www.hanssummers.com complete with photos as
well as schematics and other descriptions. Unwanted
sideband suppression is greater than 40 db by measurement
of the receiver...since the method is bilateral, SSB generation
can achieve the same unwanted sideband suppression and
the Tayloe Mixer can suppress the carrier so far that great
care in layout is required to see near the ultimate value of such.

The improved/refined Gingell polyphase network by
can result in four very accurate quadrature audio phases over
an audio bandpass that can reach "high fidelity" bandwidths.
The Yoshida network values can use 2 to 5 percent component
values for this very close quadrature over a wide bandwidth, much
better than previous quadrature methods.

See also Harry Lythall's (SM0VPO) website, for a couple of examples of SSB by polyphase networks. If for nothing else, I recommend his "Frequently Asked Silly Questions" collection from his website's "Start" section. Hilarious! For some other examples in Europe, see SM6LKM's site or that of Aleksandre Stare (S57NAN). Note: There is a great deal of innovation going on in European amateur radio today compared to what is publicized in the US.

Combining known modern-day analog and digital techniques can result in almost any desired bandwidth for the common amateur radio modes. The only limits are the regulations' limits in each administrations' civil radio regulating agency.

There are two standards in here: Morsemen Extras and everyone
else.

Morsemen Extras can do anything they wish without impunity.
They are gods of radio...never do anything wrong. They do not
plagiarize the divine words of other gods of radio.

Everyone else is subject to rule, judgement, berating, denigrating
as the gods of radio wish at the moment. [So, what else is new?]

They do. Disaster services use a variety of different forms of
radio communications.

Too many amateurs think there are only two kinds of radios,
theirs and cell phones. That's tunnel-vision thinking. There are
many different kinds of radios (other than amateur) used every
day by public service agencies and their workers...and radios
used every day by utility services and their workers...and radios
used every day by businesses and those workers other than
CB and short-range unlicensed fast-food-stand portables.

ALL of those could be coordinated into disaster planning.

>on tv, so I would not assume the ad was for amateur radio.

What Mike was doing was no different than repeating some story told by a friend who had heard something from another...and doing some creative imagination to change the original context.

Doing that in here is an example of desperate straw-grabbing in order to win some kind of imaginged message points.

Unfortunately, a lot of that straw-grabbing goes on in here. :-)

Morsemen need lots of straw to reproduce their kind of strawmen.

There MIGHT have been a public service advertisement on a local TV cable service SOMEPLACE at around 3 AM or so at the lowest ad rate time. If there is such an happening, it would be immediately puffed up, glorified, clad in the best Newington bunting, and paraded around as "publicity on national television for the entire public!"

:-)

>How can you possibly make such a judgement for another person? The EE may
>very well have a multitude of interests that would fit very nicely with ham
>radio.

Morsemen make such judgements almost with every breath.

Love morse code and one is an exemplary human being.

Dislike morse code and one is inferior, filth, not fit to live.

That's the "judgement" style of morsemen.

>There is everything from homebrew to digital communications to the
>development of new modes.

Number one on the morsemen's hit parade of superior amateurism
is morse code ability.

>And that's just a bare sampling of the technical
>aspect. Then of course there is the community service aspect. How can you
>assume that a EE would not be interested?

Tsk, tsk, tsk. I've been working with EEs since 1956 and been one
for not quite that long. MOST of them aren't that interested.

How can you expect electronics professionals working in advanced
electronics and radio to idolize and revere standards and practices
in radio that were frozen in place since before WW2?

>You are continuing to limit other people's interests and activities to those
>that you think they should care about.

No problem. The Morsemen think that everyone SHOULD love
and respect morse code skill in US amateur radio over and above
anything else in that hobby. [see Gang of Four output]

Ordinarily, in any other venue, that would be called hypocrisy.
In amateur radio it seems to be something else... :-)

A frock of wild turkeys? A pride in lyins? :-)

Kellie, that's a real tear-jerker story which is right in there with
the jerker whose son was behind the lines in Iraq in 1991
sending intel out via morse. That gets you a condescending
"uh-huh" while everyone waits for the white-coat guys to come
take you away.

You may be one step away from a geniatrics ward yourself
but I don't seriously believe you or any relative is going to
"teach morse code" to diabled elderly folks, especially
those with Alzheimer's symptoms.

You will protest the heck of that and transmit more names,
but I wouldn't be disappointed if your next post claims you
taught Ted McElroy everything he knew about morse.

>> Is that any kind of quantification like all those "26 patents" that

>Putz, you missed one.

Delusions again, faulty memory. From the Patent Gazeteer to the
Delphion, Kellie has ONLY ONE patent and that is as co-inventor.
The current ONE repleaced the previous TWO which were superseded
by the current one.

Anyone can go look at www.delphion.com and do the serarch, find
out the same. You keep on denying it but the third-party sites
haven't changed anything.

>Bullshit. Try using it to copy a Morse station 300Hz away from another
>Morse station which is 20dB stronger in a band with any noise content.
>Piece of cake by ear, dismal failure with a "decoder". Been there Putz
>so cut yer shit.

Did your last hoagie give you a tummy ache or did you, too, over-
dose on testosterone supplements?

I described somebody else's program development that was done
just for intellectual kicks by a programmer. I never claimed it would
drag all the imaginary signals out from below the noise floor. It did
manage to work through some adjacent signals received by my
Icom receiver loaned for the final experimental trials. It could handle
a wide variation of rates as well as dot-dash ratios and discriminate
against some, not all, interference bursts. That was demonstrated
in front of two morsemen who confirmed the decoding on the screen
from their real-time aural decoding of the signal.

The Icom IC-R70 had the standard 2.5 KHz BW crystal filter so it
put out all the other noise garbage and adjacent signals within

that bandwidth. During the demo with the morsemen present, only one signal appeared to have a morse code rate of 40 WPM, while all others didn't top 30 WPM. The program could handle 90 WPM equivalent maximum, a dash:dot ratio of 2:1 to 4:1 at any rate. Character and "word" spacings were also flexible but I don't remember the exact ranges...those worked within bounds determined by the rate detection interpretation.

That program was worked out around 1988 to 1989. It had NO good market application then, still doesn't, and was strictly just a programmer's own exercise in trying out some ideas. It worked, was demonstrated to Real Morsemen, and that was that.

The Real Morsemen "didn't like it," but then they got to arguing between themselves on which of them was "better." Typical. :-)

>> But...Real Hams work DX on HF with CW.
>
>Welp then I guess I'm just not a real ham since I have an SSB DXCC.

As an amateur extra I worked with years ago said, "Ham is the butchered meat of swine." :-)

Congratulations on being considered intelligible in speech at 100 locations. Raise small flag. Everyone salute. Pin medal.

I'm not going to bite the hand that brings the rig. Last year I brought
the tuner, furnished the generator, dragged along the Vibroplex Iambic
and operated.

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or
government/military service that a radio amateur has, if said radio
amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
Anderson's insults, ridicule, name-calling, factual errors, ethnic
slurs, excessive emoticons and general infantile behavior."

Yes, I do. Everyone who lives in the area is familiar with Wheeling
Island.

> Are you a regular
> customer there or just visit there once in a while?

I didn't write anything about being a customer. Yes, I have occasion to
be on Wheeling Island and have been known to drive with my eyes open.

When you show up for the lost person drill, after we've arranged your
rescue from Wildcat Hollow, I'll drop you at Wheeling Downs. It is on
the island. I'm sure the girls will have a great time discussing
professionalism.

Source record: 65852

That would definitely get them to upgrade at least to the General class level, for those that want HF priviliges.
The main point I was sort of getting at was if certain people hold getting upgrades as the only priority one should have, then a structure should be set up to coerce that into happening.

The way I look at it is, if a person wants the privileges they will earn them. If they don't, well, that is up to them. In my case, even if I had shot right up to extra class, the privileges afforded of that level of licensure are not anything I have the ability to enjoy in my life. For about the past 12 months and most likely the next 12-18 months, my useage is skimming close to the "inactive" status due to my schedule. (Not as many people to communicate with during the hours I am up..... damned third shifter here.)

Each person has their own individual reasons for what they want to enjoy out of ham radio, and that should be respected.

Not always possible. During and following a serious disaster, the radios used by public service agencies are often overwhelmed, utility services are often using their radios to deal with repairs, the repeaters used by business radios often have no power, and unpredictable noise and interference often makes CB virtually useless.

That leaves only ham radio with a pool of licensed operators with equipment capable of reliable local or even national coverage, the frequencies, and the regulatory mandate, to truly handle supplemental communications following a disaster.

Too simple, too much common sense, and a fact repeated over and over...In
other words, you wasted your time with facts on a creep who won't accept the
facts.

Obviously . . !

The bunch that leaned on me is a motley pickup crew of mostly
neighborhood club repeater crawlers I don't particulary have much in
common with. When they were all done they'd run up something like a
grand total of 150 contacts made by fifty-some "ops" all bands all
modes. Spare me! There's another group here which is a real ARES
operation and those guys know what they're doing and I've been invited
to jump in with them. They run plenty of cw and contest-style ssb and
do quite well. I think they run in the four-station class, all the
stations are networked together via computer loggers, really slick
bunch of good ops.

> I was actually leaning toward it but I
> think Bert wants to see how much we can better last year's effort out
> here.

You two kicked some serious butt last year despite the FUBARED first
genset, go for it and good luck.

I'm gonna stick with the single-op thing this year "just because".
Lotta work but I gotta do it at least once.

> > > That puts us only 600 feet away from the kitchen, beds and a shower.

> the tuner, furnished the generator, dragged along the Vibroplex Iambic
> and operated.

Tally-ho, see ya on the bands!

I'm not bothering with chasing many if any of the bonus points. I'll
be running on the mains for one. It's a very quiet residential
neighborhood and even if I had a genset I couldn't use it because of
the noise. So I'm just gonna chase q's and use FD for a "System Test
Run" and warmup for the CQ WW.

> > I'm planning on running single op from one of my daughters' back yards

>
> ...and you'll be close to the kitchen, toilet, shower and a bed.

It's a really nice way to do a FD outing. Great location, no noise at all, etc. And all the comforts of home. I had a ball despite the rig crapping out. Got to spend the weekend with my newly-minted granddaughter, ate like a pig, more London Broil and fresh air than I could stand, wunnerful.

Until the ex showed up too. She's fun like neon signs and leaky 13 kV insulators are fun on 80.

Then came the pee bucket caper. This one is the OT daughter who grew up with Dad locked on the paddles and knows very well what an empty plastic bucket alongside a contest operating position is all about. Having been brainwashed on her trip thru medical academia about sanitation and other useless trivia which don't apply on contest weekends she went ballistic when she spotted the bucket. "Mom, he even brought his damned bucket!!" "Father, you are NOT allowed to use that bucket on MY property!"

Then the midddle daughter showed up with her four in the middle of the brawl over Dad's bucket. Somebody, no doubt the fiendish middle daughter clued one of her sons abt the purpose of Pop-pop's ceremonial bucket and the kid asked if he could pee in the bucket too. Zoo. Family reunions are where ya find 'em.

Last year you two did 897 QSOs and scored 3,542 points. Good for 4th
place out of 30 1B-2 'x2' entries. Not too shabby....!

Gotta get my plan nailed down. It's been too long since I ran
single-handed and even longer since I did single-handed battery ops.

Bert hated that so much that he went out and bought a new Honda
generator so I don't think we'll lose several hours like last year's
near fiasco.

> I'm gonna stick with the single-op thing this year "just because".

I've never done solo Field Day unless you count all those years in
Africa where Field Day is everyday. We never had commercial power in
Freetown during my entire two year tour.

We did have a grill out by the operating position and have some guests
including K8MWO and his XYL. They now live on Lake Cumberland in
Kentucky.

I thought the bucket a considerate gesture on your part. It is certainly better than using her lilac bushes.

It is easy to think of your own family as dysfunctional until you encounter a gathering of someone else's. My pop used to say that if you shunned every family member who had done something embarrassing or shameful, family reunions would consist of very small groups.

Bert ponders about how much better we'd have done if we'd not lost all
the time over the generator issue. We used only one antenna, a flattop
with open wire feeder. We're considering additions for this year.

I've never done FD battery operations but have instead been with groups using various sizes of generators, ranging from little jobs with several hundred watt ratings to big 10 KVA surplus generators mounted on trailers.

The phasing idea was kept alive by a few hams even before the
developments of the past few decades. For example:

QST Sep 1969 p 11 "A Direct-Conversion SSB Receiver" by Richard S.
Taylor, W1DAX, uses the venerable 2Q4 network in a solid-state 20
meter receiver.
>
> A breakthrough in broadband single sideband phasing modulation
> and demodulation happened with Mike Gingell's PhD thesis in the
> UK (1975, University of London Faculty of Engineering), his
> "polyphase" network. Gingell is now living the US, has the US
> amateur license KN4BS (was N4VQP).

A version of this network appears in my 1988 ARRL Handbook.
>
> The Gingell network values were refined by Tetsuo Yoshida,
> JA1KO, and that can be seen in QEX, June 1995.

Sadly, it appears that Mr. Yoshida is a silent key. No one with his
name shows up in qrz.com, and the call JA1KO is unassigned.

QEX is published by the ARRL, out of Newington, CT.

Rick Campbell, KK7B, did some interesting work in the 1990s on
phasing-type receivers and transmitters suitable for use up to 500 MHz
directly. Some are available from the ARRL website:

QST Aug 1992 p 19: "High-Performance Direct-Conversion Receivers"

http://www.arrl.org/tis/info/pdf/9208019.pdf (7,720,892 bytes)

QST Jan 1993 p 32 "High-Performance, Single-Signal Direct-Conversion Receivers"

http://www.arrl.org/tis/info/pdf/t9301032.pdf (2,785,185 bytes)

QST Apr 1993 p 27 "A Multimode Phasing Exciter For 1 to 500 MHz"

http://www.arrl.org/tis/info/pdf/9304027.pdf (1,205,616 bytes)

The above projects are known as the R1, R2 and T2, respectively. Kits and PC boards are/were available.

In case anyone thinks KK7B is only interested in HF, see also some of his other articles:

QST Oct 1990 p 27 "A Single-Board Bilateral 5760-MHz Transverter"

QST Jul 1991 p 25 "A Single-Board, No-Tune 902-MHz Transverter"

QST Feb 1992 p 35 "Getting Started on the Microwave Bands"

QST May 1993 p 29 "Single-Conversion Microwave SSB/CW Transceivers"

QST is published by the ARRL, out of Newington, CT.

> RF quadrature generation can be done relatively easy with a
> pair of chained flip-flops clocked at four times the local
> oscillator frequency. That is done by Dan Tayloe's very low-
> insertion-loss mixer (patented) using a CMOS quad switch IC.
> The Tayloe Mixer also has very low intermodulation, better
> than nearly all conventional diode mixer configurations.

Dan Tayloe is N7VE. His mixer is included in a high performance 30 meter CW transceiver developed by him. His 2002 Pacificon presentation on this CW transceiver is available for free download at:

http://www.redhotradio.com/NC30QRPacificon2002.pdf

(This is a 1 MB file)

The N7VE CW transceiver is detailed in the presentation, and can be duplicated. A kit is reportedly in the works, to be available from Red Hot Radio.

> All of those were incorporated into a homebrew HF receiver
> designed by Hans Summers, G0UPL, and is described on his
> website www.hanssummers.com complete with photos as
> well as schematics and other descriptions. Unwanted
> sideband suppression is greater than 40 db by measurement
> of the receiver

This is an 80 meter CW-SSB receiver of interesting homebrew construction. Many other projects on G0UPL's website.

One of the reasons the phasing method has not caught on more with amateurs is that much better unwanted-sideband rejection can be had with crystal filters for the same or less cost and complexity.

An interesting application of the phasing principle could be to use it as the "rear end" of a superhet transceiver, enhancing the performance of a simple crystal filter and improving gain and filtering distribution.

In SSB transmitter applications, the unwanted-sideband rejection needs only to be on a par with the IM distortion products put in the unwanted sideband by later transmitter stages.

> ...since the method is bilateral, SSB generation
> can achieve the same unwanted sideband suppression and
> the Tayloe Mixer can suppress the carrier so far that great
> care in layout is required to see near the ultimate value of such

When will you publish a complete design for such a transceiver, Len?
>
> The improved/refined Gingell polyphase network by
> can result in four very accurate quadrature audio phases over
> an audio bandpass that can reach "high fidelity" bandwidths.
> The Yoshida network values can use 2 to 5 percent component
> values for this very close quadrature over a wide bandwidth, much
> better than previous quadrature methods.

Better in theory. Practice is another issue. None of the receiver designs I have seen has reached 50 dB unwanted-sideband rejection in practice. Has abyone actually developed a homebrew phasing-type receiver with unwanted-sideband rejection equalling that of modern or even vintage superhet designs?
>

> compared to what is publicized in the US.

There is a great deal of innovation going on in amateur radio today, compared to what is realized by some. (attention, "Vshah101"!)

> Combining known modern-day analog and digital techniques
> can result in almost any desired bandwidth for the common
> amateur radio modes. The only limits are the regulations'
> limits in each administrations' civil radio regulating agency.

The important question wrt "wide" SSB is not the technical process but rather whether the transmission of >6 kHz bandwidth SSB voice signals on crowded HF bands is really in the best interest of the ARS.

Not even close to any general statement...except perhaps in some
backwater areas to the east of the Mississippi.

Telephonic "911" calls are switched by telephone company switching
centers...those do NOT go to normal Public Safety Radio Service
radios. Some public safety radio service centers may temporarily
"patch through" any telephone caller to a mobile radio channel but
that is not routine. The "overwhelm" conditional is inappropriate.

Utility services NORMALLY use their radios to effect repairs to
utilities. That is in no way different from operations during real
emergencies. In properly organized utility areas such as here in
the southland, mobile radios have the capability to communicate
with public safety services.

It is not appropriate to describe business radio users as "often
without (primary) power." That varies with the type of business.
In the southland here, the Metropolitan Transit Authority has
several base stations WITH emergency power generation and
the bus radios can communicate with police departments if
there is a need to do so. MTA here is extensive. Most of the

taxicab services have emergency power at base stations. It would be a more accurate statement to say that MOST business radio users have power to operate without the primary electrical power grid.

FAA controlled airspace communications is required to have emergency power for communications. That includes "ground frequencies" used exclusively for aircraft and airport vehicle ground operations. Since nearly all aircraft communications radios of today can tune to any frequency in the civil aviation bandspace, that is another possible adjunct to extreme real emergency communications.

SHARES is a group of nearly one thousand government radio stations on HF, netted into a national radio organization for emergency and disaster communications independent of other government and civilian radio users. Those HF equipments have multiple voice and data capabilities, use ALE to the current Fed Std and train regularly despite most radios belonging to separate government agencies.

For reliable very-high-throughput multiple radio channel communications, the existing communications satellite infra-structure can allow not only national but international communications. Those would be required on extreme emergencies, far above the WTC attack of 9-11-01.

What is most often neglected in amateur thinking is the US military capability in short, medium, long, and very long communications paths at a moment's notice. Their equipment is designed for the worst possible environmental conditions and is kept in operational order all the time. US military communications, including the National Guard and Air Guard of the various states, can be used and has been used in the past for communications aid in many, many emergencies in the USA. Those do not get the publicity they deserve, a disservice of journalism editors in general.

If that isn't enough, the various TV news services can be a source of communications aid in real emergencies using everything from audio remotes to "videophone" relays of events as they occur. Those worked well in the second Gulf War as well as from the first one.

There are several other sources of short-range communications that could be utilized in a Real Emergency. Mentioning those is only good for ha-ha comments from the ignorant fantasy jerkers.

> That leaves only ham radio with a pool of licensed operators with
>equipment capable of reliable local or even national coverage, the
>frequencies, and the regulatory mandate, to truly handle supplemental

>communications following a disaster.

During REAL EMERGENCIES, the "regulatory mandate" says that
ANYONE can use/operate radios for emergency communications.
It's in the regulations applicable to ALL radio services in the USA.
[see Title 47, Code of Federal Regulations...try Parts 0, 1, 2 to see
that and its "regulatory mandate"]

Yes, amateur radio CAN do "supplemental communications
following a disaster" in the form of health and welfare messages.
FEMA does the same thing but with moving video billboards so
that messages can be seen and identified by relatives in a
disaster area. Health and welfare messages are largely for
emotional aid, are not something that is very directly applicable
to sustaining life of disaster victims. FEMA may or may not have
had its first real trial of its fly-away terminals in the 17 Jan 94
Northridge Earthquake...it was certainly in the first few of such
situations and worked well (as intended).

In reply, you and the Gang of Four will immediately come out with
ARRL newsletter quotes trying to "prove" the value of all that
"emergency disaster planning" and usual propaganda of feel-good
emotionalism toward the wonderfulness of ham radio. Before anyone
does, they ought to stop and THINK for a moment. ARRL is
organized and geared to keeping its membership, hopefully to
expand it from the many-years relative stagnation of membership
numbers. They MUST exaggerate and imply the importance of
amateur radio to the nation and community in order to promote
themselves. Exaggeration and emotional feel-good statements
are necessary for their survival. ARRL is NOT a journalism
endeavor, just another (of thousands) of membership organizations
in the United States.

There IS a cure for tunnel vision, Dwight. In order to effect a cure
you have to get out of the tunnel into reality and learn how the
rest of the world uses radio. Now. Don't rely on myths and
legends of the 1912 sinking of the Titanic. This is 91 years later.

>And the PCTA Double Standard pops up yet again.

A slight correction, Brian. Heil is manufacturing a "discussion"
concerning "my comments on Iraq" that never happened.

I'm not a party to any "'valueable' [sic] input on the use of the ham bands by military personnel in Iraq." I do know the general communications structure of the US military on land for military communications purposes as well as the equipment used in land-air-sea communications by the military. Much of that was established in doctrine and training begun in the 1980s. Much of that has been released for public distribution, is available from several public sources.

US military communications has no need to use any "ham bands" for military communications...not even as "public service messages to the 'boys' at the front." Internet communications have been available to deployed as well as home-stationed military personnel for several years, both for their personal use and for doctrine-training purposes. That has been publicized in the major national news media for years as well as industry trade publications.

US military land forces have IHFR (Improved High Frequency Radio) radio systems that could be used on the "ham bands" (in the nomenclature-jargon of old-timers' reference to "their bands") That is not normally done but is technically possible. IHFR sets are intended for under-500-KM radio paths using NVIS propagation techniques on any frequency between 2 to 30 MHz.

As far as "ARs" (Army Regulations) are concerned for US Army Spectrum Management, those are available publicly at United States Army Publication Agency website at:

http://www.usapa.army.mil

AR 5-12 is the overall document, "Army Management of the Electromagnetic Spectrum." AR 105-70 is a smaller document covering amateur radio operations from US military installations and foreign regions.

There exist similar applicable overall regulations for radio communications in the USAF and USN, but I'm not going to do Dame Heil's referencing homework for her. None in the Gang of Four plus the dickiebird have any authority to judge anything insofar as active US military operations nor dictate any "requirements" that aren't referenced by US military regulations.

>
>And the PCTA Double Standard pops up yet again.

Dame Heil isn't in the military, isn't in Iraq, isn't an attorney, wasn't with the FCC, hasn't participated in US military land-

based military communications since 1973, hasn't kept
current on US military communications equipment, doctrine,
or training in any way for three decades. Other than being
a licensed US radio amateur, Dame Heil can be described
as not knowing squat about US military personnel
equipment, doctrine, techniques, or legalities of any kind
concerning US military personnel within or without US
borders.

Dame Heil seems only bent on childish name-calling to anyone
not agreeing to his arrogant commands and directives of how
all should behave. In short, perfect for the Leider of the Gang
of Four, singing and slinging so much bullshit.

>Hollow accusations.

Very hollow. Practically a vacuum.

Dame Heil bluffs a great deal, insinuating much, inplying much,
but never giving any details, references, or anything else to
confirm any bona fides.

Dame Heil is apparently trying to be a role model of what an
amateur extra class ham should be. In that case she succeeds
only in presenting a most negative image to the public. QED.

3673. Repeater Autopatch vs. Telemarketer

Newsgroup: rec.radio.amateur.policy
Date: 2003-04-25 21:48:25 UTC
From: "D. Stussy" <kd6lvw@bde-arc.ampr.org>
Message-ID: <Pine.LNX.4.55.0304252135030.872@kd6lvw.ampr.org>
Source record: 65860

Lately, a repeater autopatch has been getting a lot of incoming calls. I suspect that some may be from telemarketers. So far, when the reverse patch answer command has been entered, the caller is gone and what is heard is the "off-hook" signal from telco. However, what is the best course of action should an amateur operator answer a reverse patch and find a telemarketer on the other end?

The options I can think of are:
1) Simply command the patch down without saying a word.
2) Say, "You're in violation of 47 CFR 97.113. Don't call again." Then command the patch down.
3) Something else.

I've already signed up the autopatch's phone number with the appropriate state Attorney General's office "Do not call list," which about July will get automatically added to the federal telemarketer "do not call list" where the law enforcing the list goes into effect in September 2003. What to do in the meantime is the problem.

In the exact situation I am thinking of, the repeater answers the phone by saying (synthesized voice), "This is the <club-callsign> amateur radio club repeater autopatch," then waits for about 30 seconds for a command before the reverse patch ringout on the radio. No audio is gated to or from the radio side until the reverse patch answer command is input. The speech board doesn't have a DVR nor the vocabulary to tell telemarketers to hang up up front.

Comments?

I betcha you two could bust 1000 Q's easily.

>We used only one antenna, a flattop
>with open wire feeder. We're considering additions for this year.

I learned the hard way that, in small FD ops, complications are often not worth
the trouble. FD's a weenie domestic contest, not CQWW or even SS. No
multipliers, which sucks, but they're not gonna change it. With one tx you go
where the contacts are, rate is everything.

>trailers.

BTDT, from just me and a battery and a Ten Tec Argosy to the giant setup at K3BKG years ago. WW2 surplus generator, prolly from SCR-399. 2003 will be FD #36 for me.

The first time I did battery ops was with W3NNL and K3OIO, about 1974. We used 'NNL's homebrew 80/40 CW transceiver.

That xcvr was a neat bit of work. Hybrid unit - solid state except driver and final. Direct conversion with phasing-type rejection of the 'audio image'. This was before Gingell's work was published, btw. 'NNL made the audio PSN. Because it only had to deal with CW bandwidth it did not have to be as complex. Rejection was about 40-45 dB. 12BA6 driver feeding 1625 final. Vibrator supply for 10 W input. Could do up to 75 watts with home power supply, or 50 watts with his dynamotor.

Whole thing was built in the case from a defunct National FB-7. Back then BAs were a dime a dozen. Betcha he wishes he'd left the FB-7 alone!

Phil isn't in the military, says he never was, and isn't in Iraq.
Phil has no legal authority over amateur operation in Iraq that I'm
aware of.

Do you have information that he does have authority in Iraq? Perhaps
for 12USD he can process their paperwork.

Who said he was? Len knows about radio, yet isn't allowed to comment
on radio here. If he should, he is unkindly reminded that there is a
difference between military and commercial RF and amateur RF.

Tell me something I don't know. Of course the posts are public.
Your crack about being stationed at a snack bar making sense to you
doesn't seem to make much sense. I asked you a question, you chose
diversion.

Look, Dave, Len said something about where you were stationed. You started talking about a snack bar. Were you or were you not stationed at a snack bar?

You really need to be more clear and quit straying off the subject, if that's what happened.

> > QSL?
>
> Anyone who says this on the ham bands is a stupendous lid.

Ahem, no license required to operate here.

> > Getting back to the snack bar in Vietnam. Why you keep bringing it

You broke no regs that we know of. We're not required to know the
reqs of other countries, remember?

But it is not good amateur practice to work out of band frenchmen,
especially when you've been informed by a frenchman what their legal
6M bandwidth was.

Show us the letter that you said your Commander gave you, denying you
the privelege to operate amateur radio in Vietnam. Unless you threw
it away as you've alluded to previously.

You'll never get off your butt to help your fellow man, no matter what
exams I pass.

You're typical of many lazy bubbas that I've met along the way. I
recall sandbagging a flood wall for a town near St. Louis in 93.

The locals came out to watch.

There's a perfectly rational explanation for that. I have a normal
sized head.

I recall reading that Hoover was reviewing a graduating class of FBI
cadets. As they marched by, Hoover asked, "Who's the pin-head?" Not
knowing who Hoover was referring to, the Commandant reviewed the
uniform requirements of that class, and two cadets had the same small
sized hat. They were both dismissed.

Were you ever dismissed from the FBI academy?

> K4CY/p or K4CY/m.

Here's more. From "The ARRL Letter Vol. 22, No. 17April 25, 2003

==>HAMS ABOUND ON UN WORLD FOOD PROGRAM'S IRAQ "FAST INTERVENTION TEAM"

Several radio amateurs--including some of the world's top operators--are among United Nations World Food Program (WFP) "Fast Intervention Team" (FITTEST) personnel already in Iraq or poised nearby and expected to be inside the war-ravaged country very soon. FITTEST is responsible for building technical infrastructure to ensure WFP can move relief food supplies rapidly and safely. Any ham radio operations would be secondary to the WFP's efforts in Iraq, however.

Peter Casier, ON6TT--who's expected in Baghdad as early as next week--says the WFP will have a critical role in the post-conflict era in Iraq "where 60 percent of the population is dependent on external food aid." In ham radio circles, Casier may be better-known as a top contester and one the

operators of Afghanistan's YA5T after the US-led military action there in 2001.

Other YA5T alumni expected to soon be in Iraq as part of the WFP effort include Robert Kasca, S53R--the last UN international staff person evacuated from Iraq before the conflict--Mark Demeuleneere, ON4WW, and Mats Persson, SM7PKK. Casier and Demeuleneere paired up at World Radiosport Team Championship (WRTC) events in 2000 and 2002. Kasca was director of competition for WRTC 2000. Casier says he, Kasca and Dane Novarlic, S57CQ, were on the air from Iraq until just before the war broke out.

Casier reports that Diya Sayah, YI1DZ--one of the primary operators at the Baghdad Radio Club's YI1BGD and the WFP's Baghdad telecommunications officer--is safe and well in Iraq.

FITTEST also has a mandate to install or build basic technical networks, Casier said, including such systems as VHF repeaters, satellite communications and HF fixed and mobile stations. The team also will set up radio rooms, rework administrative procedures, and assign call signs for all UN humanitarian-aid workers and non-governmental organizations (NGOs)--other international aid organizations.

Others ready to go include Ed Giorgadze, 4L4FN, who's in Turkey. Until last November Giorgadze had operated from North Korea as P5/4L4FN while on a WFP assignment in Pyongyang. Patrick Pointu, F5ORF, and Mark Tell, VK4KMT, among several other FITTEST team members who are radio amateurs.

The Daily DX <http://www.dailydx.com> reported this week that Willie Mohney, YI/KV4EB, has been operating daily on 15 meters at or around 21.270 MHz, moving to 20 meters--perhaps around 14.255."

I don't know how well they do wrt to FD scores but they're a very
active ARES group in the next county west. They have a big complete
ham station set up permanently in the county dispatch facility
including at least one repeater with it's antenna installed up the
county tower. They have their choice of fire stations they can use for
FD sites. They operated from the grounds of the county hospital last
year. These guys are not HT yahoos, from everything I've seen so far
they're what ARES groups should be like.

Grills & a bit of socializing are FD epitomized. Until it becomes the
whole focus of the operation and ya wind up with a radio picnic
instead of a FD operation. Which is the primary reason Jim and I
bailed away from the previously mentioned group.

> > Until the ex showed up too. She's fun like neon signs and leaky 13 kV

>
> I thought the bucket a considerate gesture on your part. It is
> certainly better than using her lilac bushes.

It's all nonsense.

'Way back there was an unofficial local dxer's group which passed out
"Pee Bucket" Awards to those who ran in contests for an entire 48 hour
weekend. Ya got a plastic bucket with your qsl card glued on it. I got
mine and it became a sort of family totem for the weekends Dad spent
in the 'tests. No, I didn't pee in the thing, it was a low-brow family
joke. The problem was that my youngest daughter never caught onto the
fact that it was just a joke and thought that I really did pee in the
bucket. Compounded by me taking for granted that she knew it was a
silly joke.

> It is easy to think of your own family as dysfunctional until you

You're welcome, Bill.

An interesting thing about the piece is that nowhere does Andy Rooney actually
say what HIS opinion of the war is.

--

Heard an interesting interview on NPR's "Fresh Air". the other day. Interviewee
was named Tom Freeman (I think) who has written about the Mideast for 20 years
or so. One point he made was that we should expect a certain amount of
animosity from the Iraqis now, because even though the USA spent billions of
dollars and over 100 lives to liberate them, the mere fact that outsiders were
needed to do it was/is humiliating. 'Specially when over 20 years of brutal
sadistic tyranny are ended in less than a month of fighting.

Brian:

Brother, you ain't kiddin! What a neat little tuner! I'd almost be tempted to get the kit version, but my up-close eyesight isn't up to the task of doing that kind of work anymore. My last project was an active attenuator for fox hunting, and I had to build the whole thing under one of those big lighted magnifiers! Like I said, I haven't decided on the 817 yet. I'm still licking my wounds from my annual battle with the IRS.

Hmmmm, interesting that we see this differently, Jim. I think Andy Rooney's
last sentence says what he thinks about *this* war--not necessarily war in
general. However, he does not blatantly say one way or the other and I
think that is the journalistic attitude in him.

No. The speech board is one of those with a limited, pre-programmed vocabulary, and this system does not have DVR capability (as noted above). It's just not possible.

The only suggestion I have received in e-mail was to somehow generate the tone sequence that comes out at the beginning of the "disconnected number message." (I have yet to find out what that sequence of three [multi-]tones is.)

Who are writing a reply to?!?

If you want to mention a venerable 34-year-old article, fine, but
the essential component, a metal tube shell enclosed network
that dates back at least 42 years is NOT anything new...or
even close to being "state of the art."

>> A breakthrough in broadband single sideband phasing modulation
>> and demodulation happened with Mike Gingell's PhD thesis in the
>> UK (1975, University of London Faculty of Engineering), his
>> "polyphase" network. Gingell is now living the US, has the US
>> amateur license KN4BS (was N4VQP).
>
>A version of this network appears in my 1988 ARRL Handbook.

Okay, we'll all paste a little gold star beside your name.

The Gingell polyphase network was shown implemented in a 1974
issue of Radio Communication, the magazine of the RSGB. See
Pat Hawker's "Technical Topics" monthly column there. Can you
guess who the author was? Does the call sign G3PLX ring bells?

Imagine that...29 years ago someone in Europe tried something
NEW, a network that didn't need special 1% value components.
Didn't use some "venerable" old part from the USA.

>> The Gingell network values were refined by Tetsuo Yoshida,
>> JA1KO, and that can be seen in QEX, June 1995.
>
>Sadly, it appears that Mr. Yoshida is a silent key. No one with his
>name shows up in qrz.com, and the call JA1KO is unassigned.

So what is the significance of that? Humans get born, grow, and
die. All of us will die...except maybe the immortal morsemen.

How does your statement "invalidate" the article's findings? Does
mathematics die with the mathematician?

Europeans have tried out the Yoshida article values and those
WORK very well.

>QEX is published by the ARRL, out of Newington, CT.

Thank you, Captain Oblivious.

The earth revolves around the sun. Need some more "news?"

>Rick Campbell, KK7B, did some interesting work in the 1990s on
>phasing-type receivers and transmitters suitable for use up to 500 MHz
>directly. Some are available from the ARRL website:
>
>QST Aug 1992 p 19: "High-Performance Direct-Conversion Receivers"

So? Go find a copy of Radio Communication magazine with
that polyphase network in Pat Hawker's column. Guess what
you will find in the same month, same column? Two versions
of European direct-conversion receivers! 29 years ago, not 11
years ago.

>> RF quadrature generation can be done relatively easy with a
>> pair of chained flip-flops clocked at four times the local
>> oscillator frequency. That is done by Dan Tayloe's very low-
>> insertion-loss mixer (patented) using a CMOS quad switch IC.
>> The Tayloe Mixer also has very low intermodulation, better

>
>Dan Tayloe is N7VE. His mixer is included in a high performance 30
>meter CW transceiver developed by him. His 2002 Pacificon presentation
>on this CW transceiver is available for free download at:

So? I saw that. Did you see the Tayloe article in RF Design
magazine as I described it? No? You don't read RF Design

magazine? Tsk, tsk, tsk, all that degreed electrical engineering stuff long ago and you don't (or won't) read RF Design?

RF Design magazine is a free (controlled circulation) trade magazine for those involved in (guess what) RF design! :-) Jimmie must not be in the RF design part of "electrical engineering" somewhere...

The Tayloe Mixer is an elegant INNOVATION in heterodyning plus some built-in filtering. The RF Design magazine article shows that. The Tayloe Mixer is unique in that its insertion loss is almost nothing (less than a db, conventional diode mixers have conversion losses of 6 db or more), and has an intermodulation level (IP3 or any other form) so high it is practically at the breakdown level of the CMOS switch at the heart of the mixer.

You can't seem to recognize that, can you? All you do is trot out that Pacificon paper mention again.

>http://www.redhotradio.com/NC30QRPacificon2002.pdf
>
>(This is a 1 MB file)
>
>The N7VE CW transceiver is detailed in the presentation, and can be

Okay, as a red hot morseman, you've emphasized "CW" several times in this post. Another little gold star beside your name.

>> All of those were incorporated into a homebrew HF receiver
>> designed by Hans Summers, G0UPL, and is described on his
>> website www.hanssummers.com complete with photos as
>> well as schematics and other descriptions. Unwanted
>> sideband suppression is greater than 40 db by measurement
>> of the receiver
>
>This is an 80 meter CW-SSB receiver of interesting homebrew
>construction. Many other projects on G0UPL's website.

Yes, there are. Hans is a relatively young lad (under 30) and ACTIVE in trying out both new and old things. He also likes to work "CW" with a one-tube transmitter and his homebuilt, homedesigned receiver.

>One of the reasons the phasing method has not caught on more with
>amateurs is that much better unwanted-sideband rejection can be had
>with crystal filters for the same or less cost and complexity.

"Less cost?!?" WRONG.

Crystal bandpass filters are found in commercially-built, commercially-sold, ready-to-go amateur radios. That's EASY to apply. Hand over charge card, do electronic money exchange, walk out with ready-built radio box...and instantly one is some kind of "experienced expert" on crystal filters. Yah, yah, yah. Tell me another, Capt. Oblivious.

Compare that to Harry Lythall's (SM0VPO) small PCB for a SSB phasing exciter that uses ordinary 5% parts (less than 30 of them) with the Gingell original value set. No quartz crystal measurement for matching, no need to find motional capacitance or equivalent inductance-capacitance of quartz units.

>An interesting application of the phasing principle could be to use it
>as the "rear end" of a superhet transceiver, enhancing the performance
>of a simple crystal filter and improving gain and filtering
>distribution.

Yes, but without going into the Group Delay variation of different crystal bandpass filters, you can wind up with a heap of odd distortion (unequal amplitudes over bandpass) when coupling the two methods. But, I will give you slack since you've probably never examined group delay on bandpass filters, have you?

>In SSB transmitter applications, the unwanted-sideband rejection needs
>only to be on a par with the IM distortion products put in the
>unwanted sideband by later transmitter stages.

I was NOT talking about "later transmitter stages." That would apply to ALL SSB excitation systems.

Phasing SSB generation requires two major things: Extremely good relative 90 degree phase relationships across the modulation bandwidth done by the phasing network (of whichever kind); extremely good relative 90 degree phase relationships of the heterodyning oscillator source.

If either one of those two major quadrature conditions deviates from 90 degrees (quadrature), both the unwanted sideband suppression and carrier suppression suffer. That has a calculable value as given in the "Collins SSB Book."

A quadrature oscillator source is easiest to obtain over a relatively wide bandwidth by two high-speed digital bistable multivibrators and the oscillator input at four times the desired heterodyning frequency. The only error in quadrature there is from the difference in propagation delay of the flip-flop stages, down in the sub-nanosecond range for 74F series digital devices. For low-power applications, 74HC series can be used, but not over as wide a range as 74F.

Yoshida refinement of the Gingell network values yields quadrature errors of less than 0.2 degrees using worst-case 2% tolerance components; less error with normal tolerance distribution. The quadrature polyphase network of Gingell's has an inherent

wide-band (audio) nature, as wide as anyone wants to extend
the passive R-C network. It could be extended to cover 20 to
20,000 Hz if so desired. Some frequency diversity "carrier"
equipments were tried in the early 1980s using the Gingell
polyphase network which had responses exceeding those values.
[see IEEE Transactions on Communications, several issues in
that time frame]

With quadrature errors so low, the amount of suppression of
unwanted spectral components requires more care in layout to
avoid capacitive cross-coupling. 40 db suppression is quite easy
to do and 50 db suppression is possible with good attention to
PC board layout.

>> ...since the method is bilateral, SSB generation
>> can achieve the same unwanted sideband suppression and
>> the Tayloe Mixer can suppress the carrier so far that great
>> care in layout is required to see near the ultimate value of such
>
>When will you publish a complete design for such a transceiver, Len?

Why should I? You only introduced this NEW item in the thread
to misdirect the subject. You just don't have the background or the
experience in this area of radio to talk about it in engineering and
design terms. Your only recourse is to do a lot of pseudo biblio-
graphy about old QST articles.

>Better in theory. Practice is another issue. None of the receiver
>designs I have seen has reached 50 dB unwanted-sideband rejection in
>practice.

Hot darn! A radio god spoke! "You haven't seen one that reached
such suppression!" That means you have SEEN THEM ALL!
You've examined them all with a spectrum analyzer, have you?

Of course you have...with such bodacious talent at morsemanship
and all those back issues of QST, that makes you an expert on
everydamthing in amateur radio. We all know that. You've implied
it three ways from Sunday for years in here.

>Has abyone actually developed a homebrew phasing-type
>receiver with unwanted-sideband rejection equalling that of modern or
>even vintage superhet designs?

Were you in the grape fields sampling vintage superhets again?
Tsk, tsk, tsk.

Let's put it this way...ALL of the phasing SSB receivers have
suppression better than a Hallicrafters S-40 or an SX-28! :-)
That includes ALL such receivers of the "direct conversion"
type with or without a Tayloe Mixer. Dumas!

Could you (with a straight, honest face) stand there and describe
the test set-up to actually MEASURE the difference in
suppressions? I don't think so. All your theory and "references"
seem restricted to old copies of QST and Electric Radio.

>There is a great deal of innovation going on in amateur radio today,
> compared to what is realized by some. (attention, "Vshah101"!)

More dip-switch remarks from the sorry egoed morseman.

Try to remember whose post you are remarking on, dummy load.

Your exhalted morsemanship doesn't get you credit one in the
technical end of radio. None. Zero. Zip. Nada. Nicht. Nyet.

>> Combining known modern-day analog and digital techniques
>> can result in almost any desired bandwidth for the common
>> amateur radio modes. The only limits are the regulations'
>> limits in each administrations' civil radio regulating agency.
>
>The important question wrt "wide" SSB is not the technical process but
>rather whether the transmission of >6 kHz bandwidth SSB voice signals
>on crowded HF bands is really in the best interest of the ARS.

Oh, my, now you are the Judge, Jury, Arbiter, and Decision-Maker
on Who Should Speak About What?!?

If you would bother to really wear all those ivy-covered degrees and
THINK for a moment, you would find that phasing networks CAN
do SSB generation and demodulation to full human-range audio
frequencies. The bandwidth allowed by LAW for US amateur SSB
transmissions is somewhat ambiguously defined in 97.301 f (1) and
(2). It's all there in black and white, set with real type and printed
on real paper...the LAW for US radio amateurs. YOU have to live
with it, I don't.

You, like Dame Heil, haven't been admitted to any legal bar to make
all those high-sounding legal judgements either in court or out of it.
All you can do is express yourself in a newsgroup and try to build
an image of the Great Ham Technical Guru, an olde-tymer. You do
that but all you have to back you up is some old ARRL publications.

You do "Hi-Fi" fraud, sport...and everyone with any real engineering
background can see it.

Polish.

Does it matter? You're gonna throw your two cents in anyway.

>If you want to mention a venerable 34-year-old article, fine, but
> the essential component, a metal tube shell enclosed network
> that dates back at least 42 years is NOT anything new...or
> even close to being "state of the art."

You use "state of the art" in quotations. Now the question falls to YOU, Lennie, who are YOU "reply(ing)" to? Jim never said ANY of that was "state of the art.

>>Sadly, it appears that Mr. Yoshida is a silent key. No one with his
>>name shows up in qrz.com, and the call JA1KO is unassigned.
>
> So what is the significance of that? Humans get born, grow, and

Irreverence for an engineer, Lennie? Sheesh!

>>QEX is published by the ARRL, out of Newington, CT.
>
> Thank you, Captain Oblivious.

Can't stand seeing ANYTHING of value come out of CT, can ya, Oh Putzy One?

>The earth revolves around the sun. Need some more "news?"

Sure! But we know we won't be seeing it come from you.

>RF Design magazine is a free (controlled circulation) trade
> magazine for those involved in (guess what) RF design! :-)
> Jimmie must not be in the RF design part of "electrical
> engineering" somewhere...

Hmmmmmm. I happen to know several fols who ARE degreed engineers working in (guess what) RF design. Of the seven, only one has "seen" any such magazine, and none are active subscribers?

So how is it that they are allowed to "design" anything without using a LennieRant approved resource????

>You can't seem to recognize that, can you? All you do is trot
> out that Pacificon paper mention again.

Do facts change from day to day, Lennie?

>>The N7VE CW transceiver is detailed in the presentation, and can be
>>duplicated. A kit is reportedly in the works, to be available from Red
>>Hot Radio.
>
> Okay, as a red hot morseman, you've emphasized "CW" several
> times in this post. Another little gold star beside your name.

Does the preference for CW applications invalidate the technical relevence of the work cited?

Or is it simply YOUR disdain for the mode which "invalidates" Jim's references?

>>One of the reasons the phasing method has not caught on more with
>>amateurs is that much better unwanted-sideband rejection can be had
>>with crystal filters for the same or less cost and complexity.
>
> "Less cost?!?" WRONG

Now you are an expert at mass production cost distribution?

>Yes, but without going into the Group Delay variation of different
> crystal bandpass filters, you can wind up with a heap of odd
> distortion (unequal amplitudes over bandpass) when coupling
> the two methods. But, I will give you slack since you've probably

All this gone to waste.

>I was NOT talking about "later transmitter stages." ...(SNIP)

>Phasing SSB generation requires...(SNIP)

>If either one of those two major quadrature conditions...(SNIP)

>A quadrature oscillator source...(SNIP)

>Yoshida refinement of the Gingell network...(SNIP)

>With quadrature errors so low...(SNIP)

I did not notice a single reference to Amateur Radio POLICY in any of that, Lennie.

Other than to impress yourself with your plagiaristic skills and cut-and-paste technique, what was it for if not to make Lennie look like an RF Hero?

>>When will you publish a complete design for such a transceiver, Len?
>
> Why should I? You only introduced this NEW item in the thread
> to misdirect the subject.

I notice that Lennie only get's on his C&P rants when he thinks he can dazzle us with his technical prowess. Kinda like asking him to do a microwave tutorial.

>You just don't have the background or the
> experience in this area of radio to talk about it in engineering and
> design terms.

Then why the eight paragraph dissertation above?

>Your only recourse is to do a lot of pseudo biblio-
> graphy about old QST articles.

Uh huh.

>Hot darn! A radio god spoke! "You haven't seen one that reached
> such suppression!" That means you have SEEN THEM ALL!
> You've examined them all with a spectrum analyzer, have you?

This is where we can insert Jim's Lennie Profile.

>Of course you have...with such bodacious talent at morsemanship
> and all those back issues of QST, that makes you an expert on
> everydamthing in amateur radio. We all know that. You've implied
> it three ways from Sunday for years in here.

Yep. No "discussing" of the technical points Jim brought up...No "civil debate". Just usual Leonard H. Anderscum Rant and Drivvel.

Hmmmmm....R&D....Research and Development or Rant and Drivvel...?!?! Have to think on that one a bit!

I didn't hear it. But what I find interesting is that they don't have
the courage to die fighting for their own freedoms, but are willing to
fly an airplane into a building or strap on a dynamite vest to hurt
anyone else.

I did hear on NPR of an unintended bombing where -every- villager
interviewed made it a point to say that they were poor. I don't know
if they tell everyone everyday that they are poor or if they were
setting the stage for reparations.

I think Iran just got twice as large.

> even close to being "state of the art."

Who said it was? The 2Q4/350 isn't available new any more.

The point of mentioning that article was simply to show that interest in the phasing method never died out among hams, even 34 years ago.
>
>>> A breakthrough in broadband single sideband phasing modulation

> out that Pacificon paper mention again.
>
"Again"?

>>http://www.redhotradio.com/NC30QRPacificon2002.pdf
>>
>>(This is a 1 MB file)

Lots of good info. Including a duplicatable design.
>>
>>The N7VE CW transceiver is detailed in the presentation, and can be
>>duplicated. A kit is reportedly in the works, to be available from Red
>>Hot Radio.
>
> Okay, as a red hot morseman, you've emphasized "CW" several
> times in this post. Another little gold star beside your name.

So? Is that bad?

Some anti-code types in here have claimed that there is no connection between
Morse code and technical innovation. Not even among hams. Yet the mixer you
describe as an "elegant INNOVATION" came about because one of those 1x2 Extras
you so love to put down was looking for something new. And its first
implementation was in a ham radio CW transceiver.

Does that bother you? It sure seems to. You carefully avoided all mention of
the inventor's callsign, Red Hot Radio and the Pacificon paper.
>

> "Less cost?!?" WRONG.

No, it's correct. How many superhet receivers with crystal filters have you built at home, Len?
>
> Crystal bandpass filters are found in commercially-built, commercially-
> sold, ready-to-go amateur radios. That's EASY to apply. Hand over
> charge card, do electronic money exchange, walk out with ready-built
> radio box...and instantly one is some kind of "experienced expert"
> on crystal filters. Yah, yah, yah. Tell me another, Capt. Oblivious.

Why all the snide remarks, Len?

In case you hadn't noticed, many homebrew designs use either commercially available filters or homebrew ladder filters.
>
> Compare that to Harry Lythall's (SM0VPO) small PCB for a SSB
> phasing exciter that uses ordinary 5% parts (less than 30 of them)

>>> care in layout is required to see near the ultimate value of such
>>
>>When will you publish a complete design for such a transceiver, Len?
>
> Why should I?

Because you lecture endlessly on other's work and theoretical possibilities,
but don't give practical details.

> You only introduced this NEW item in the thread
> to misdirect the subject.

No, I want to actually BUILD something and put it on the air.

> You just don't have the background or the
> experience in this area of radio to talk about it in engineering and
> design terms.

You're quite wrong about that, Len.

But it's clear all you want to do is talk, talk, talk about theory and other
people's articles.

> Your only recourse is to do a lot of pseudo biblio-
> graphy about old QST articles.

Incorrect. Misdirection.
>
>>Better in theory. Practice is another issue. None of the receiver
>>designs I have seen has reached 50 dB unwanted-sideband rejection in
>>practice.
>
> Hot darn! A radio god spoke! "You haven't seen one that reached
> such suppression!" That means you have SEEN THEM ALL!

Nope. There may exist practical designs with better performance

> You've examined them all with a spectrum analyzer, have you?
>
> Of course you have...with such bodacious talent at morsemanship
> and all those back issues of QST, that makes you an expert on
> everydamthing in amateur radio. We all know that. You've implied
> it three ways from Sunday for years in here.

Misdirection and more snide remarks.

You're avoiding the central issue: Are there practical phasing type receiver
implementations that result in better than 50 dB of unwanted sideband
suppression? You obviously don't know of any, either, but don;t want to admit
it. Seems like you are so emotionally attached to the phasing concept that you

can tolerate no rational discussion of its limitations.
>
>>Has anyone actually developed a homebrew phasing-type
>>receiver with unwanted-sideband rejection equalling that of modern or
>>even vintage superhet designs?
>

In other words, you can't point to any such designs, so you resort to insults.

> Dumas!

Gee, that really convinces me of your professionality, Len.
>
> Could you (with a straight, honest face) stand there and describe
> the test set-up to actually MEASURE the difference in
> suppressions?

Sure. Several methods. One simple way, usable by amateurs without a lot of test equipment, would involve a low distortion signal generator, some calibrated attenuators, and an output meter. Care must be taken not to overload the receiver input when measuring the unwanted sideband.

> I don't think so. All your theory and "references"
> seem restricted to old copies of QST and Electric Radio.

Well, you're wrong. But you'll never admit it.

>>> Combining known modern-day analog and digital techniques
>>> can result in almost any desired bandwidth for the common

>>on crowded HF bands is really in the best interest of the ARS.
>
> Oh, my, now you are the Judge, Jury, Arbiter, and Decision-Maker
> on Who Should Speak About What?!?

No, that is obviously your role, Len. It's what you do...

All I did was POSE A QUESTION. You seem to think that's wrong.
>
> If you would bother to really wear all those ivy-covered degrees

Where are your degrees from, Len? What institutions? Are they accredited? What date is on the diploma(s)?

> and
> THINK for a moment, you would find that phasing networks CAN
> do SSB generation and demodulation to full human-range audio
> frequencies.

I know that, Len. What's your point, other than to toss out insults?

> The bandwidth allowed by LAW for US amateur SSB
> transmissions is somewhat ambiguously defined in 97.301 f (1) and
> (2). It's all there in black and white, set with real type and printed
> on real paper...the LAW for US radio amateurs. YOU have to live
> with it, I don't.

Everyone has to live with it. Do you think you are above the LAW?

Perhaps the LAW should be changed. This is a policy newsgroup, remember?

All I did was POSE A QUESTION. You seem to think that's wrong.
>
> You, like Dame Heil, haven't been admitted to any legal bar to make
> all those high-sounding legal judgements either in court or out of it.

Neither have you. Hasn't stopped you from commenting on anything in here.

> All you can do is express yourself in a newsgroup and try to build
> an image of the Great Ham Technical Guru, an olde-tymer.

Not me. You. Lots of lectures on theory and other people's work, and recollections of your own "professional" stuff. Plus a very strong bias against certain groups like the ARRL and hams who use CW.

But when it comes to practical designs you've done, that can be duplicated by amateurs with typical basement workshop resources, you have very little to offer.

And Baxter will continue to thumb his nose at the
FCC, as he has successfully done for almost two
decades now. The LAST place the commission
wants to deal with k1man is in the federal court system.
Baxter has a well documented case against the FCC,
with a legal team and lots of money to back it up.
If Baxter is ever removed from the air, then the ARRL
will also be removed.
Dream on, Baxter is here to stay. Get used to it!

I see those as a limited set of extremists...not the
general population. From what we have learned, it seems
even Saddam relied more on non-Iraqis for his
extrmists than his own countrymen.
.....

Cheers,
Bill K2UNK

I've used an 817 with a Z-11, they definitely *work*, the Z-11 will
handle some pretty nasty SWRs too. The pair together is only a largish
handful.

Why is that Kim? Because I can see what is happening?
Iran is intent on turning Iraq into a Iran too. They want a religious
government there just like theirs. In fact they actually want Iranians
running Iraq.

You don't think they (the Iranians) wont resort to guerilla attacks against
the infidels? US? Open your eyes.

Bush better keep a large armed force in Iraq...with orders to return fire.
Or we will have another Nam. Heck...we still may, no matter what we do.

I guess that depends on how bad we really want what we say we want. A free Iraq and a non-secular, Iraqi elected government.

It could disintegrate into a US 'selected/appointed' strongman with the US providing the military and financial support. Gee, where is Nuguyn Van Thieu when we need him, eh?

See my point?

Well, the news I've been listening to indicates that the Iraqi folks are
pretty hellbent on just that same thing. The thing many don't seem to
realize is that this is a part of the world where everything *is* all about
religion/religious dogma and it's always been that way. It wouldn't
surprise me at all to see Iraq become what I've heard called, a theocracy.
Why does that surprise anyone? AND, what in the world are "we" (the United
States Gov't.) supposed to do about it? Why? What gives us the right to

make it so that things such as theocracies do not happen? Do unto others as you would have done unto yourself, right? Well, I wouldn't want someone coming "in here" (to the United States) and telling me how it's going to be.

>
> You don't think they (the Iranians) wont resort to guerilla attacks against
> the infidels? US? Open your eyes.
>

That's where you need help, Dan. You think just because of my comments that I have no clue. You're wrong. I have way too much clue and that is why the whole idea of our being "over there" has me concerned--when I bother to think about it and most of the time I try not to. I don't think "we" (the so-called Western world) have a chance in Hell of introducing these people to a new way of thinking. Nor, as indicated by your comments and fervor for one, do most here have a chance in Hell of being able to understand or comprehend what these people are all about.

>
> Bush better keep a large armed force in Iraq...with orders to return fire.

Never happen in 2,000+ years. Oh yeah, that's right--it hasn't. And it
won't in the next 2,000 years. And, the idea of an armed presence to
"maintain peace and order" is kind of like thought police, isn't it? Oh,
forgive me for being so real about how I think.

>offer.

There's that word "practical" applied to Lennie, again...As in no
PRACTICAL experience.

Now no practical work to demonstrate. He HAS mentioned his Icom R-70
receiver on several occassions, along with several other spamcan radio
accessories.

You'd think Mr Engineer would be able to put some of that "smarts" to
work.

Guess not. Vipul take note.

Steve, K4YZ

3720. SARS How, Why and the Possible Impact of it.

Newsgroup: rec.radio.amateur.policy
Date: 2003-04-26 18:15:10 UTC
From: kingwesthiway@aol.com
Message-ID: <20030426141510.06283.00000358@mb-m07.aol.com>
Source record: 65907

The new disease SARS is actually a marriage of the common cold and the sexually transmitted disease Chlamydia. The disease was created in a Chinese biological weapons lab in 1999, but escaped when a jealous husband that was a biologist at the Chinese lab unleashed it on the family of the man sleeping with his wife. Because of the close proximity and huge population of China it quickly spread throughout China. The estimated number of cases in China is now 30,000 due to the fact that earlier deaths were ruled as pneumonia and the similar symptoms between the two diseases.
Today China is faced with a horrific problem and is now trying to attempt to stop SARS spreading. As a result foreigners that have already been exposed to the disease are leaving China and returning to their home lands it is estimated that 2 out of 10 will carry the disease to their nation of origin.
SARS is the ultimate biological weapon, because it is from the same disease family as the common cold and is bonded with Chlamydia.ï¿½
SARS attacks the repository system killing 15% of the recipients that are treated, this is a important issue since third world nations do not have the resources to treat the infected. The huge problem is that SARS quickly mutates and a person can be quickly reinfected with disease. It is estimated once the disease takes hold in a third world nation population with in one year the fatality rate will reach 50% or more.
We see this disease as similar to the spread of computer viruses and the model used by the Chinese to create this virus is the same. The military leadership wanted to quickly and silently attack a large population, isolate it and kill it. The problem is that the disease has now struck their own country and it looks like their population will decrease to 500 million within 3 years.
In a best case sceranio within three years SARS will reduce the population of the world by 20%, in a worst case scernario it could reach a 75% reduction with 5 years. The reason is that in third world nations the resources to fight the spread of this disease are nonexistant and the cost to NATO countries will be huge, but the
highly educated and affluent populations of NATO countries will help stop the major outbreaks that will occur.
The positive outcome of SARS could be a huge reduction in the human population of the world. Thus the disease could be a blessing and some environmental and depopulation advocates favor introducing the disease into those areas of the world that in their view are over populated. China has already done this by producing the bioweapon and having it accidentally unleashed. A introduction in India and Indonesia will greatly reduce the strain on natural resources those three nations now have on the world.
Overpopulated cities like Mexico City, New York and Los Angeles could be brought back into balance. The problem is the disease might not stop and it could wipe out the human species within ten years. Thus mankind has invented and spread the means of destruction of his own existance as has been written about in fiction and religion for the last 10,000 years.

>>
>> Who are writing a reply to?!?
>
>What does that mean, Len?

Tsk, tsk, tsk, you've run out of comprehension skills, have you?

You need to focus on who you are replying to. You seem
confused.

>> If you want to mention a venerable 34-year-old article, fine,
>
>Then why are you so critical?

You live in the past too much. Not only that, your resources
of information are too tightly bound to old ARRL publications.

>> but
>> the essential component, a metal tube shell enclosed network
>> that dates back at least 42 years is NOT anything new...or
>> even close to being "state of the art."
>
>Who said it was? The 2Q4/350 isn't available new any more.

Hasn't been "new" for a long time. That was my point.

There HAVE been "new" networks publicized for a quarter
century. RSGB publications has had them repeatedly.
[you appear to be an Anglophile, should know such things]

>The point of mentioning that article was simply to show that interest in the
>phasing method never died out among hams, even 34 years ago.

You have too much concentration on "dying out." We will all
do that. Think positive, think of future things. Drop all the
glorification of the past.

>Why all the sarcasm, Len? Is it a bad thing that Gingell's work was
>recognized and published here in the USA?

"Recognized and published here" some 13 years after it appeared
in RSGB's Radio Communication magazine. :-)

Rather SLOW in the "recognition" department, I'd say.

>> The Gingell polyphase network was shown implemented in a 1974
>> issue of Radio Communication, the magazine of the RSGB. See
>> Pat Hawker's "Technical Topics" monthly column there. Can you
>> guess who the author was? Does the call sign G3PLX ring bells?
>
>So what's your point? Nobody denies the origin of the network.

Peter Martinez didn't "origin" the network. Try to stay focussed.

Martinez is a clever innovator in the UK. He came up with PSK31,
not the polyphase quadrature audio network. Took a while before
PSK31 was "recognized and published" in the USA after it had
successful trials in European amateur radio.

European amateurs were already trying out and (successfully)
using the Gingell polyphase network in SSB equipment before
it was "recognized and published" in the USA.

>> Imagine that...29 years ago someone in Europe tried something
>> NEW, a network that didn't need special 1% value components.
>> Didn't use some "venerable" old part from the USA.
>
>Isn't that obvious?

Not to you. You keep promoting some old component manufactured
by a Pennsylvania company long ago...as if it were the final word on
state of the art. Can anyone understand geographic bias on your
part? [of course they can]

>>>Sadly, it appears that Mr. Yoshida is a silent key. No one with his
>>>name shows up in qrz.com, and the call JA1KO is unassigned.
>>
>> So what is the significance of that?
>
>I was saddened to learn he was no longer with us, and that no one holds his
>callsign.

Did you want it? :-) :-) :-)

Concentrate on the analysis done by Yoshida in the QEX article.
You ARE the certificated MSEE in here...which you keep mentioning
your degrees every so often...you should KNOW the significance of what
Yoshida's work shows and its possibilities. You haven't come close
to the contents of the Yoshida article of 8 years ago.

You misdirect into some "sadness" emotionalism which doesn't
address anything technical or anything that can point to the wide-
band inherent nature of the Gingell polyphase network.

Note: Wideband performance is part and parcel of possible
"Hi-Fi" SSB, aka wide audio modulation in radio. That happens
to be the origin of this particular subject thread. The thread isn't
about callsigns or mortal departures.

>> Humans get born, grow, and
>> die. All of us will die...except maybe the immortal morsemen.
>
>What is the significance of your unprovoked snide remarks like that last
>sentence?

One of the Gang of Four has already stated in here that he "will
live forever." That's evidentiary in a search of Google, is it not?
[you seem to live in Google a lot of the time, should know those
things]

>> How does your statement "invalidate" the article's findings? Does
>> mathematics die with the mathematician?
>
>It doesn't and they don't.

Then try to discuss the contents of Yoshida's QEX article, not his
apparent lack of QRZ listing.

>Where do you get these ideas?

In this virtual Twilight Zone of olde-tyme hamradio where you live
in the past, referencing others' accomplishments...that's where. :-)

>> Europeans have tried out the Yoshida article values and those
>> WORK very well.
>
>Have YOU tried them out? Have YOU built any phasing-type SSB receivers or
>transceivers, Len? The information has been out there for over a quarter
>century...

Yes, I've built them. I've analyzed them with analysis programs
written by others AND myself.

You want "proof" of that? :-) Go to the RSGB's Radio Communication
issue almost a year after the 1970s mention and look in Pat Hawker's
"Technical Topics" column.

For any other "proof," you don't have the clearance. "You don't have
the need to know!" :-) :-) :-)

>So what? Why are you stuck in the past? Do those old designs have better
>performance? Are the parts and boards for them still available?

Don't try this misdirection route, ancient one, you get lost.

I'm not the one who has running bibliographies of old ARRL
publication sources...YOU are. I'm not the one touting the
glories of a long-out-of-date Barker & Williamson component,
YOU are. [that's in Google too]

[on the Tayloe Mixer...]

>Yet for some reason you did not include his callsign in your post. You
included
>the callsign of everyone else mentioned. Perhaps you do not like to admit that
>the inventor is a 1x2 Extra.

Misdirection on your part again, Jimmie. Tsk, tsk, tsk.

Dan Tayloe wasn't born with his amateur radio callsign, was he?
He has an uncommon surname which should be noticeable.

The elegant innovation/invention of the Tayloe Mixer is applicable
to ANY radio-electronics situation involving heterodyning, not just
amateur radio. Dan Tayloe has much to his credit in invention
and innovation and much of that work is not just for ham radio.

Try recognizing the PERSON, not the callsign, Jimmie. It will
make you better rounded as a human being.

>That's ALL obvious from the Pacificon presentation. Available free for the
>download.

So is RF Design magazine for engineers. Free subscription...
if you work in that area. [you might try their website, also free
for access, but be careful, you might learn something new!]

RF Design magazine included Dan Tayloe's amateur callsign in
end notes. RF Design editors aren't tunnel-vision focussed on
amateur radio.

>> You can't seem to recognize that, can you?
>
>You couldn't be more wrong, Len.

I think I'm right in my assessment of you and your "qualifications."

You keep harping on the past, old ARRL articles, anything that
remotely relates to amateur radio, misdirect into other areas
when confronted with technical matters. Snow shoveling.

>>>http://www.redhotradio.com/NC30QRPacificon2002.pdf
>>>
>>>(This is a 1 MB file)
>
>Lots of good info. Including a duplicatable design.

That's also true for the article in RF Design magazine. :-)

I've read both. Have you? I don't think so. :-)

>> Okay, as a red hot morseman, you've emphasized "CW" several
>> times in this post. Another little gold star beside your name.
>
>So? Is that bad?

Not for mighty macho morsemen. Little gold stars are their
"accreditation" as much as the pretty wall hangings and living
in fantasy environments.

>Some anti-code types in here have claimed that there is no connection between
>Morse code and technical innovation. Not even among hams. Yet the mixer you
>describe as an "elegant INNOVATION" came about because one of those 1x2
>Extras you so love to put down was looking for something new. And its first
>implementation was in a ham radio CW transceiver.

Tsk, tsk, tsk...you are getting "redhot" again. :-)

I have no claims of telepathic powers and I doubt that you possess
such. Yet, you make this tenuous "relationship" (for lack of any
word describing a fantasy) that the Tayloe Mixer is directly related
to Tayloe's amateur radio hobby activities. Directly.

You assume powers that are magic, mystical, metaphysical in
divining True Purposes. You don't have them. You have fantasies.

>Does that bother you? It sure seems to. You carefully avoided all mention of
>the inventor's callsign, Red Hot Radio and the Pacificon paper.

"Carefully avoided?" :-)

I identify people, human beings, by their names. That is the convention
in most world societies.

In ARRL's world, that very common societal convention is thrown
aside with the requirement of identification by callsign and ALWAYS
preceding their occupations by "ham."

You are an ARRL syncophant. I can understand your predilection
preferences of over-identification with the amateur radio hobby.
The US Patent and Trademarks Office isn't that narrowly-focussed
(Tayloe Mixer is patented). The FCC isn't that narrowly-focussed
and doesn't require staff or commissioners to be granted amateur
radio licenses in order to regulate amateur radio.

>> Yes, there are. Hans is a relatively young lad (under 30)
>
>Why do you talk down to him, then?

"Talking down?!?" :-) Tsk, tsk, tsk.

Hans is a very active electronics hobbyist, is degreed in physics,
and works professionally as an investment broker for a large
UK investment firm. He has described a number of electronics
and amateur radio projects very well and in detail on his web
site. He and his wife have just become parents for the first time
so all of his hobby activities have been on hiatus. :-)

>A lot of us are ACTIVE in trying out both new and old things. Some of us also
>like to work CW with our homebuilt, homedesigned equipment.

Of course all of you "us" do. We've all been informed of your
"homebuilt, homedesigned" Elecraft K2. :-)

>No, it's correct. How many superhet receivers with crystal filters have you
>built at home, Len?

Only two for HF. :-)

As an electronics design engineer (retired but only from regular hours),
I've had to do cost evaluations for both R&D and production projects.
Such activity instills unbiased evaluation of the task at hand. Hobby
desires don't enter into such work.

As far as a comparison of crystal filter versus R-C phasing methods
of SSB generation or demodulation, anyone can take examples of
already-built projects and cost them out. Crystal filter components
are more expensive than an entire sub-assembly of polyphase
networks and its attendant op-amp circuits and its heterodyne
oscillator phasing sub-circuit. That's the way it is.

>Why all the snide remarks, Len?

You get back what you give, Jimmie. :-)

>In case you hadn't noticed, many homebrew designs use either commercially
>available filters or homebrew ladder filters.

I'm very aware of the "commercially available filters" having procured
several from different vendors while working regular hours. That
includes procurement from Collins Radio's filter division in California
while working at Rocketdyne Division of Rockwell International.
Collins Radio was then another Division of Rockwell International. :-)

As to "homebrew ladder filters" using separate quartz crystal units,
I've only done one of those. I have the literature on design that
appeared in QST and QEX as well as other places. The time and
trouble of matching crystal characteristics, exact resonances, and
accurate measurement of results is inordinately time-consuming.
Anyone doing that needs a stable, accurate frequency counter
AND stable generator; I designed and built my own counter and
have both an HP 606 and HP 608 signal generator to use in my
workshop. Such "homebrew (crystal) ladder filters" are NOT
weekender projects nor are they cheap to make for one-of hobby
applications.

>That's nice, Len. But it's not a receiver or a transceiver.

Tsk, tsk, tsk, the tassel of your MSEE cap and gown must have
worn out long ago. :-)

The subject of this thread was the METHOD of wideband SSB
generation and whether or not it was applicable to amateur radio
use. It was NOT about "a receiver or a transceiver."

Try to stay focussed on the SUBJECT. You are having difficulty
with your ego over-riding objectivity all the time.

>> Yes, but without going into the Group Delay variation of different
>> crystal bandpass filters, you can wind up with a heap of odd
>> distortion (unequal amplitudes over bandpass) when coupling
>> the two methods. But, I will give you slack since you've probably
>> never examined group delay on bandpass filters, have you?
>
>You might be surprised...

That is NOT any sort of answer. It is merely evasion.

Describe "group delay" and relate how it applies to either narrow
or wideband filter subsections of SSB generation or demodulation.

>Your response to these new ideas is awfully negative, Len.

Jimmie has extremely poor reading comprehension. :-)

>> Phasing SSB generation requires two major things: Extremely
>> good relative 90 degree phase relationships across the modulation
>> bandwidth done by the phasing network (of whichever kind);
>> extremely good relative 90 degree phase relationships of the
>> heterodyning oscillator source.

>>
>> If either one of those two major quadrature conditions deviates
>> from 90 degrees (quadrature), both the unwanted sideband
>> suppression and carrier suppression suffer. That has a calculable
>> value as given in the "Collins SSB Book."
>
>We KNOW, Len.

No, you apparently don't know. Since your cap's tassel is so
worn out and frayed from twirling it in everyone's face in here,
you need some refreshing in basics of SSB.

You seem offended by basic information on radio physics. That's
typical behavior of morsemen in here and Gang of Four members
in particular.

>> With quadrature errors so low, the amount of suppression of
>> unwanted spectral components requires more care in layout to
>> avoid capacitive cross-coupling. 40 db suppression is quite easy
>> to do and 50 db suppression is possible with good attention to
>> PC board layout.
>
>Have you done it? You say it's "easy".

Relatively easy to observe with the right test equipment. I have
the test equipment, the experience.

>Because you lecture endlessly on other's work and theoretical possibilities,
>but don't give practical details.

I don't "lecture endlessly." :-) Reiteration of basic information is
necessary in here due to the vacuum of basic radio fundamentals
of others. Amateur radio in the US is not tied up solely with "CW"
and contesting and operating. Some amateurs like to assemble
transceiver kits and say they are "homebuilt, homedesigned."

>> You only introduced this NEW item in the thread
>> to misdirect the subject.
>
>No, I want to actually BUILD something and put it on the air.

Tsk, tsk, tsk. Did your Elecraft K2 fail? :-)

YOU are the one with both BSEE and MSEE degrees and
"working as an electrical engineer." You should be able to
do that by yourself without help from others.

Elecraft has some other products in kit form, several other
manufacturers do, too. Those would allow you to "build"
something and get it on the air.

>> You just don't have the background or the
>> experience in this area of radio to talk about it in engineering and
>> design terms.

>
>You're quite wrong about that, Len.

You just deny and evade. No one seems to know what you can
or can't do other than a lot of claims.

>But it's clear all you want to do is talk, talk, talk about theory and other
>people's articles.

Tsk, tsk, tsk. I'm not the one referencing all those old QST
articles! :-)

>> Your only recourse is to do a lot of pseudo biblio-
>> graphy about old QST articles.
>
>Incorrect. Misdirection.

Nope. On target. See YOUR previous posting in this thread. :-)

>Misdirection and more snide remarks.

Tsk, tsk, tsk. Your ego is showing grievous wounding. :-)

>You're avoiding the central issue: Are there practical phasing type receiver
>implementations that result in better than 50 dB of unwanted sideband
>suppression?

Is that the "central issue?" I don't think so. See the Subject Title
in the header of this thread.

I don't claim to have seen every phasing type SSB application, so
all I've done is mention SOME of them. Anyone can "do the
numbers" in conceptual design for evaluation. Design engineers
DO that for a living. Hobbyists can do the same if they apply
themselves. I've done both.

"50 db unwanted sideband suppression" limitations or exceedances
apply equally to crystal filter SSB subsystems. Their frequency
responses can be upset in circuit applications by mismatching
from manufacturer's specifications, circuit layout, incorrect driving
and output active stages. In order to accurately measure such
suppression levels, one needs the equipment in an accurate test
equipment setup.

>You obviously don't know of any, either, but don;t want to admit
>it. Seems like you are so emotionally attached to the phasing concept that
>you can tolerate no rational discussion of its limitations.

Tsk, tsk, tsk. :-)

Phasing method of SSB modulation or demodulation is inherently
capable of wideband modulation...IF a wideband phasing network
is used. Crystal filter method of SSB modulation or demodulation
has a bandwidth firmly fixed by the filter's bandwidth. Relatively
wide bandwidths of crystal filters - as components - are more

costly than relatively narrow bandwidth units according to many
filter manufacturer's listings.

Crystal filter SSB subsystems have fewer components than the
polyphase quadrature phasing subsystems but both occupy
approximately the same PC board area. Crystal filter components
have greater insertion loss than polyphase audio filters.

The thread subject concerned the relative wideband applicability
of SSB modulation-demodulation. An objective engineering-
style evaluation should cover the many differences and similarities
between systems to achieve a proper comparison. The emotion
of the evaluator has no place in the picture.

>> Dumas!
>
>Gee, that really convinces me of your professionality, Len.

Alexandre Dumas was a noted French writer of popular fiction.
He was a professional writer.

>> I don't think so. All your theory and "references"
>> seem restricted to old copies of QST and Electric Radio.
>
>Well, you're wrong. But you'll never admit it.

I was too hasty to say "all" in place of "nearly all." You DID
quote a Pacificon presentation by Tayloe. :-)

You have NOT acknowledged reading RF Design magazine, an
electronics engineering industry periodical (free to those in
the industry) or the RSGB's Radio Communication magazine.
Neither did you acknowledge the IEEE Transactions of
Communications of the 1980s which had several papers on
polyphase filters.

>> Oh, my, now you are the Judge, Jury, Arbiter, and Decision-Maker
>> on Who Should Speak About What?!?
>
>No, that is obviously your role, Len. It's what you do...

I have both training and experience in objective evaluation of
electronics projects. I bother to research things without acting
as an ARRL syncophant or endlessly mention "CW" when it
doesn't apply to a discussion.

>All I did was POSE A QUESTION. You seem to think that's wrong.

Tsk, tsk, tsk. You've "posed" more than some supermodels. :-)

I've asked questions in here also. You want to escape and
evade technical questions by being vague and general in
answers or you become (apparently) infuriated by non-agreement
to your expertise.

>> If you would bother to really wear all those ivy-covered degrees
>
>Where are your degrees from, Len? What institutions? Are they accredited?
>What date is on the diploma(s)?

Irrelevant to "Hi-Fi" SSB links, the subject title above. :-)

This isn't about academic institutions or degrees or certificates.
Yet, you've reminded everyone of yours from time to time.

>I know that, Len. What's your point, other than to toss out insults?

Tsk, tsk, tsk. Jimmie thinks that any disagreement with his
remarks, however slight, is an "insult." Poor baby. Too much
ego at work there.

>> The bandwidth allowed by LAW for US amateur SSB
>> transmissions is somewhat ambiguously defined in 97.301 f (1) and
>> (2). It's all there in black and white, set with real type and printed
>> on real paper...the LAW for US radio amateurs. YOU have to live
>> with it, I don't.
>
>Everyone has to live with it. Do you think you are above the LAW?

I'm not licensed in US amateur radio service. Regulations on
US amateur radio transmission do not apply directly to me.
They apply to you because you are licensed in US amateur radio.

>Perhaps the LAW should be changed. This is a policy newsgroup, remember?

Why should the LAW be changed?

What is IN this LAW about wideband SSB emission that bothers
you so much?

>All I did was POSE A QUESTION. You seem to think that's wrong.

Tsk, tsk, tsk, there you go "posing" again. Everyone has run
out of film. :-)

Mr. DeMille isn't ready for your closeup yet...

>Not me. You. Lots of lectures on theory and other people's work, and
>recollections of your own "professional" stuff. Plus a very strong bias
>against certain groups like the ARRL and hams who use CW.

Tsk, tsk, tsk. I'm not a synchophant for ARRL. I'm not a Believer
in the emotional enjoyment or efficacy of morse code as a
communications mode. :-)

>But when it comes to practical designs you've done, that can be duplicated by
>amateurs with typical basement workshop resources, you have very little to
>offer.

Tsk, tsk, tsk. Just who is the double-degreed BSEE and MSEE
in here who "works as an electrical engineer?" :-)

I should think another who has built 8 ham stations, all home-built and home-designed could do all the "offering." :-)

I'm just an electronics hobbyist who is also a professional in electronics design with years of experience in that. I don't design radio kits so I can't offer those. I've written for Ham Radio magazine, too, and was an Associate Editor there...again, not "offering" anything other than intellectual illumination, information, and advice on real, practical circuits.

So, tell us all about how you "homedesigned" that Elecraft K2? Was it difficult? Did you get all the details from old articles in QST? :-)

> You live in the past too much. Not only that, your resources
> of information are too tightly bound to old ARRL publications.

WHOA! That's pretty heavy coming from "Mr. Rear Area Radio Station in the Fifties" ! ! !

>You have too much concentration on "dying out." We will all
> do that. Think positive, think of future things. Drop all the
> glorification of the past.

Only the glory of Heaven exists in the future, Lennie. All of mankind's glories DO exist "in the past", Your Ignorantness.

>Peter Martinez didn't "origin" the network. Try to stay focussed

Still not taking hints, even obvious ones, Lennie?. It's "focused". Please try to remember that next time you are asserting somone is "angry" becasue of typos.

>Not to you. You keep promoting some old component manufactured
> by a Pennsylvania company long ago...as if it were the final word on
> state of the art. Can anyone understand geographic bias on your
> part?

Yet of course you can provide the post wherein he said this?

We won't hold our breath waiting.....

>Concentrate on the analysis done...(SNIP)

Relevence to "policy"...???

>You misdirect into some "sadness" emotionalism...(SNIP)

Relevence to policy...???

>Note: Wideband performance is part and parcel of possible
> "Hi-Fi" SSB, aka wide audio modulation in radio. That happens
> to be the origin of this particular subject thread. The thread isn't
> about callsigns or mortal departures.

Hmmmmm....bandwidth authorizations are relevent to "policy", however why
are you denigrating Jim's expression of regret for the passing of a fine
ENGINEER, Lennie?

Sorry that such expressions of sorrow will never grace this forum for YOU?

>>Where do you get these ideas?
>
> In this virtual Twilight Zone of olde-tyme hamradio where you live
> in the past, referencing others' accomplishments...that's where.

Lennie's lack of citing a verifyable quote/post/Google search noted.

Yet another perfect example of the accuracy of Jim's "profile" for Lennie.

>For any other "proof," you don't have the clearance. "You don't have
> the need to know!"

Ahhhhh...one of YOUR "Seven Hostile Actions", Oh Putzy One?

Just another sample of Lennie's "I got my name in print" boasting without
any EVIDENCE of originality or practical experience.

>I'm not the one who has running bibliographies of old ARRL
> publication sources...YOU are. I'm not the one touting the
> glories of a long-out-of-date Barker & Williamson component,
> YOU are. [that's in Google too]

Jim's "running out" of references? I don't think so. He posts 2
paragraphs, YOU post 20 trying to rebut him.

Someone's running out of something, but I don't think it's Jim.

>>Yet for some reason you did not include his callsign in your post. You
>included
>>the callsign of everyone else mentioned. Perhaps you do not like to admit
>that
>>the inventor is a 1x2 Extra.
>
> Misdirection on your part again, Jimmie. Tsk, tsk, tsk.
>
> Dan Tayloe wasn't born with his amateur radio callsign, was he?
> He has an uncommon surname which should be noticeable.

Yet you fail to address Jim's comments.

>Try recognizing the PERSON, not the callsign, Jimmie. It will
> make you better rounded as a human being.

So that's why you felt it necessary to make references to a Swedish and
British Amateur by THEIR calls, Lennie...?!?!

>RF Design magazine included Dan Tayloe's amateur callsign in
> end notes. RF Design editors aren't tunnel-vision focussed on
> amateur radio

"Focused". You're getting angry again, Lennie! Temper Fry!

>You keep harping on the past, old ARRL articles, anything that
> remotely relates to amateur radio, misdirect into other areas
> when confronted with technical matters. Snow shoveling.

"Snow shovelling"....Hmmmmmm...I'll remember that one next time we are dumped on with yet another "...there I was at ADA at three in the morning back in 1953..." stories.

>I have no claims of telepathic powers and I doubt that you possess
> such. Yet, you make this tenuous "relationship" (for lack of any
> word describing a fantasy) that the Tayloe Mixer is directly related
> to Tayloe's amateur radio hobby activities. Directly.

So...we are to assume that Mr. Tayloe did all this work, but then DIDN'T apply it to his own Amateur Radio activities?

BBBWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! ! !

>You assume powers that are magic, mystical, metaphysical in
> divining True Purposes. You don't have them. You have fantasies.

Someone here is having fantasies, alright, Lennie...It's not me and it SURE isn't Jim.

>>Does that bother you? It sure seems to. You carefully avoided all mention of
>>the inventor's callsign, Red Hot Radio and the Pacificon paper.
>
> "Carefully avoided?" :-)
>
> I identify people, human beings, by their names. That is the convention
> in most world societies.

This is an Amateur Radio newsgroup. In Amateur Radio it IS "convention" to co-identify licensed persons by their callsigns.

You seem perfectly happy to cite the callsigns of persons whose work you feel "supports" your rants, yet when the possession of an Amateur license might embarrass you, you skip it.

>In ARRL's world, that very common societal convention is thrown
> aside with the requirement of identification by callsign and ALWAYS
> preceding their occupations by "ham."

Nothing is "thrown aside". The callsign is an addendum, not a substitute.

>The US Patent and Trademarks Office isn't that narrowly-focussed
> (Tayloe Mixer is patented).

"focused". You're mad again. Calm down, Oh Putzy One.

>The FCC isn't that narrowly-focussed
> and doesn't require staff or commissioners to be granted amateur
> radio licenses in order to regulate amateur radio.

Here we go back to the FCC and what the commissioners are/are not required
to do to BE commissioners. Not related to any aspect of Amateur Radio policy.

>Hans is a very active electronics hobbyist, is degreed in physics,
> and works professionally as an investment broker for a large
> UK investment firm. He has described a number of electronics
> and amateur radio projects very well and in detail on his web
> site. He and his wife have just become parents for the first time
> so all of his hobby activities have been on hiatus.

Very nice. Now...it's relevence?

>>A lot of us are ACTIVE in trying out both new and old things. Some of us
>also
>>like to work CW with our homebuilt, homedesigned equipment.
>
> Of course all of you "us" do. We've all been informed of your
> "homebuilt, homedesigned" Elecraft K2.

As opposed to what YOU have built lately...?!?!

>As an electronics design engineer (retired but only from regular hours),
> I've had to do cost evaluations for both R&D and production projects.

Your Rants and Drivvel require cost evaluations?

>>Why all the snide remarks, Len?
>
> You get back what you give, Jimmie

The you need to cite Jim's "snide" remarks that are even 1/100th of the
vile, arrogant and downright indecent bile you spew, Your Scumminess ! ! !

>Such "homebrew (crystal) ladder filters" are NOT
> weekender projects nor are they cheap to make for one-of hobby
> applications.

Guess I screwed up. The filters I built (four band superhet based on a
WA0UZO/W1CER design many moons ago) DID go together in a weekend, and I don't
remember it being more than $20. Huh !

Better luck next time, eh, Lennie? Guess some PRACTICAL experience goes a
long way, doesn't it...?!?!

>Try to stay focussed on the SUBJECT. You are having difficulty
> with your ego over-riding objectivity all the time.

Yet another personal insult with an embedded typo. Must be REALLY mad
now...

>>Have you done it? You say it's "easy".
>
> Relatively easy to observe with the right test equipment. I have
> the test equipment, the experience.

Uh huh.

>>Because you lecture endlessly on other's work and theoretical possibilities,
>>but don't give practical details.
>
> I don't "lecture endlessly."

Sure you do. Reams and reams of it! Google refers.

>Reiteration of basic information is
> necessary in here due to the vacuum of basic radio fundamentals
> of others.

But WHY, Lennie?

YOU insist that this forum is ONLY for the discussion of the Morse Code
Testing policy, yet ehre you are, in black and white, insisting that you NEED
to discuss things of a TECHNICAL nature.

Where's the leadership? Where's the example?

You show us neither.

>You just deny and evade. No one seems to know what you can
> or can't do other than a lot of claims.

Sure sounds suspiciously like YOU, Lennie.

>Tsk, tsk, tsk. I'm not the one referencing all those old QST
> articles!

You only make an "issue" of the source of the information, Your Vileness,
not the accuracy of it. Why is that?

>I don't claim to have seen every phasing type SSB application...(SNIP)

>"50 db unwanted sideband suppression" limitations...(SNIP)

>Phasing method of SSB modulation or demodulation...(SNIP)

>Crystal filter SSB subsystems have fewer components...(SNIP)

>The thread subject concerned the relative wideband applicability
> of SSB modulation-demodulation. An objective engineering-
> style evaluation should cover the many differences and similarities
> between systems to achieve a proper comparison. The emotion
> of the evaluator has no place in the picture.

Then why do you BRING emotion to it, Lennie? If you didn't, you wouldn't
find it necessary to wrap your rants in reams of technobabble that, by your OWN
"rules", has no place in a "policy" forum.

>>> Dumas!
>>
>>Gee, that really convinces me of your professionality, Len.
>
> Alexandre Dumas was a noted French writer of popular fiction.
> He was a professional writer.

Yet another frail attempt to obfuscate his lack of literary skill behind childish attempts to hide profanity and namecalling.

>You have NOT acknowledged reading RF Design magazine, an
> electronics engineering industry periodical (free to those in
> the industry) or the RSGB's Radio Communication magazine.

You've not cited where it was required to do so.

>I have both training and experience in objective evaluation of
> electronics projects.

Too bad your training was weak and your skills substandard, Lennie.

>>I know that, Len. What's your point, other than to toss out insults?
>
> Tsk, tsk, tsk. Jimmie thinks that any disagreement with his
> remarks, however slight, is an "insult." Poor baby. Too much
> ego at work there.

Hmmmmm.Yet again Jim Miccolis continues to refer to Lennie as "Len", yet "Len" continues to try and belittle and denigrate Jim as "Jimmie".

Am I the only one who see's exactly what kind of two-faced scumbag Lennie really is? Or am I the only one willing to just call him for what he is?

>I'm not licensed in US amateur radio service.

You're not licensed in ANY adio service, save for your GROL, which does not grant you ANY privileges in ANY radio service except for those spelled out in the STATION license of any employer foolish enough to engage you for hire.

>Regulations on
> US amateur radio transmission do not apply directly to me.
> They apply to you because you are licensed in US amateur radio.

Sure they apply to you, Lennie. Go ahead and fire up on 14.195Mhz (with more than 100mW! and a Part 15 antenna!) and start calling "CQ...CQ...This Is Len Anderson calling anyone" and see what happens.

>Tsk, tsk, tsk. I'm not a synchophant for ARRL.

Too bad. At tleast then you'd be SOMETHING.

>I'm just an electronics hobbyist who is also a professional in
> electronics design with years of experience in that. I don't
> design radio kits so I can't offer those. I've written for Ham Radio
> magazine, too, and was an Associate Editor there...again, not
> "offering" anything other than intellectual illumination, information,
> and advice on real, practical circuits.

Which practical circuits are presently in operation in YOUR listening shack, Lennie? A little pre-amp for that Icom R-70? Maybe a converter so you can listen to local ATIS or ATC traffic, thereby making yourself an expert on aeronautical navigation? Or perhaps a VLF converter to listen to "birdies' and "whistlers" everytiime you break wind?

>So, tell us all about how you "homedesigned" that Elecraft K2?
> Was it difficult? Did you get all the details from old articles in
> QST?

Tell us of YOUR Amateur Radio projects, Your Insultingness...!

No, not necessarily. The trick is to get the Iranian backed Shites to see we are serious. Perhaps a little attitude adjusting is in order. Similar to what is happening NOW with Syria.

I see no alternative to a large American army in place in Iraq for many years. Any other solution will invite a major attack by Iran and other not so friendly states in the area.

NONE of the ARAB states really give a rip about the USA. We are simply a very big consumer of their oil. Given their preference we would all go away and NEVER come back.

But now the pandora box is open. Only time will tell.

Now there is a idea. Why not take that up with the UN (Useless Nitwits) ?
Im sure they could have a nice chat about it.

Lets do a reality check here Kim. IRAQ has been sponsering and paying for terrorists for decades. They are in cahoots with Syria, and Lebanon (which is occupied by Syria).

Remember how the Palestinians were bragging about being paid 20000 bux US to blow themselves up and kill Isralies?

Ever wonder why they didnt target the US? Well they did. Starting with the cruiseship Acili Lauro (sp??). Who do you thing pays for all this crap? Sure Bin Laden is a player, but not the only one. Dont you see that these groups are all intertwined and interconnected?

Heck I just heard where the GERMANS stopped a ship leaving EGYPT and heading to KOREA with NUCLEAR stuff on board. ITS EVERYWHERE KIM.

WE ARE AT WAR. This is not some sort of Bosnia or Grenada...this is the start of WW3.

Wake up and smell the roses.

It's a conspiracy to keep you out of the loop, kindly old gent. Your typical response to anyone whose experience is as great or greater than your own is one of ridicule, disbelief, condescent, or attempted one-upmanship. You, after all, have argued FCC regs with a former FCC attorney, have attempted to belittle one who has a couple of EE degrees which you don't hold, have let on that you know more about U.S. Department of State communications than one who made a career of such work and have done your best to insult anyone working for the ARRL who has dared post here.

Your feeble attempt to mask some of your barbed comments with little smiley faces fails. Your lengthy cuts and pastes of material you've garnered from the web, interspersed with peculiar phrases about "Gods of Radio", "ARRL sycophants" and the like leads readers to believe that you may be posting from the rec room of a mental facility.

> Dame Heil is apparently trying to be a role model of what an
> amateur extra class ham should be.

My name isn't Dame Heil, Leonard. I haven't made any attempt to become a role model for amateur radio any more than I consider you a role model for whatever it is that you think you are. What you aren't is someone involved in amateur radio in any capacity.

> In that case she succeeds
> only in presenting a most negative image to the public. QED.

You aren't the public. My remarks to you are not directed at the general public. They are for you, an unpleasant elderly man with much time on his hands. You present a most negative image here. ZBM-2.

I'm going to answer your long-winded message in two parts - this one being the first of the two (yes, I can be long-winded also). The other will address your conclusion, while this will address the key points of your message.

"Len Over 21" wrote:
>
> Not even close to any general statement...except
> perhaps in some backwater areas to the east of
> the Mississippi.

Certainly larger cities are better equipped to deal with the disruptions following a disaster, but even the largest cities may struggle with this problem during a serious disaster and that is even more so the case for smaller towns.

> Telephonic "911" calls are switched by telephone
> company switching centers...those do NOT go to
> normal Public Safety Radio Service radios. Some
> public safety radio service centers may temporarily
> "patch through" any telephone caller to a mobile
> radio channel but that is not routine. The
> "overwhelm" conditional is inappropriate.

I think we're talking about different types of disasters here. What you say is perhaps true for small, isolated, incidents. But, it is a different story when it comes to the serious disaster. In my next message (the second one in this two-part message), I describe a common disaster that impacted three states. This is not abnormal - an large earthquake along the west coast might impact a similar area.

In these larger situations, the telephone system is one of the first things to fail. This is caused by overuse by civilians trying to call friends and family and damage to parts of that system by the disaster itself.

> Utility services NORMALLY use their radios to effect
> repairs to utilities. That is in no way different
>from operations during real emergencies. (snip)

It most certainly is different. Following a disaster, most utilities have to call in all employees (vacations and time off ends) and for assistance from neighboring utilities to help with the repairs. These extra personnel place a huge load on the existing communications system. Needless to say, this is not the place to look for supplemental communications.

> It is not appropriate to describe business radio users
> as "often without (primary) power." (snip)

You go on to describe several groups with radios that could be used during a disaster. While it all sounds nice, there are a number of pitfalls. For example, it is the towers of base facilities most often damaged during a disaster (the towers of the main communications facilities). Therefore, a guy with a mobile business radio in his vehicle isn't going to do much for you. The ham operator, on the other hand, can at least get you some type of antenna into the air.

Even if you did have a use for people with a business radio in the vehicle, there are other problems. For example, a company is never going to authorize the participation of its employees because of potential liability. And without that authorization, that employee is operating on his own without permission to use his employer's radio equipment.

I could list other pitfalls, but that describes the three largest - proper equipment, coordination, and liability.

> FAA controlled airspace communications is required to
> have emergency power for communications. (snip)

Have you been listening to the news recently? The air traffic control system is already nearly overwhelmed with a lack of personnel and equipment. This is also not the place to go looking for supplemental communication equipment or manpower.

> What is most often neglected in amateur thinking is the US
> military capability in short, medium, long, and very long
> communications paths at a moment's notice. (snip)

Sadly, most National Guard and Air Guard units don't maintain a wealth of communications equipment. Their equipment is limited mostly to what is needed by that unit during peacetime. When called to active duty, members of that unit often join an existing active duty unit with its own radio equipment.

Furthermore, active duty units, and even Guard units, require permission from the chain of command before becoming involved. This takes time, which is not something in abundance following a disaster. These units do often eventually arrive to help, but often days into the disaster recovery (when the most serious demand for supplemental communications is in the hours and days following a disaster).

> Those do not get the publicity they deserve, a disservice
> of journalism editors in general.

National Guard personnel often get recognition for their efforts. But their efforts are often different than what we're discussing here - supplemental communications during and following a disaster.

> If that isn't enough, the various TV news services can be a
> source of communications aid (snip)

And they (TV news services) work well in smaller disasters. However, following a major disaster, these can be disrupted as much as other communications facilities (see example in next message).

> During REAL EMERGENCIES, the "regulatory mandate" says
> that ANYONE can use/operate radios for emergency
> communications. (snip)

However, I'll repeat what I said before - only ham radio offers a pool of licensed operators with equipment capable of reliable local or even national coverage, the frequencies, and the regulatory mandate, to truly handle supplemental communications following a disaster.

It is a package deal - manpower, equipment, available frequencies, and a regulatory mandate to offer assistance. No other radio service offers all four of those. Why would any state or local government agency pass up all that for the patchwork of supplemental communications you describe?

Okay, lets see that reality by looking at a real disaster - one I was directly involved in. In 1998, Hurricane Hugo hit the North Carolina, South Carolina, and Georgia coasts. In the hours leading up to this storm's landfall, most residents evacuated this area, including the employees at most television and radio stations.

In the days leading up to landfall, public service communications was filled with traffic dealing with evacuations, accidents, and getting hospital patients to other inland hospitals. During this same period, private utility communications was filled with traffic dealing with storm preparation, shutting down utilities in certain areas, and in re-enforcing certain key utility systems and subsystems.

At this point, it should have been obvious the system would soon be overwhelmed. Employees at dispatch centers were already working overtime and many of those would evacuate as the storm approached.

From this point on, we'll look at just Horry Country in upper South Carolina since that is where I was located. As the storm hit, public service personnel hunkered down to wait out the storm as communications started failing over a wide area. This included the police/fire communications tower in Horry County, most cellular towers in the coastal areas, and many towers belonging to utility companies.

Only one television and one radio station remained on the air during the storm. The television station lost its tower about two in the morning (an hour after first landfall), leaving only the one radio station on the air for the next two days.

As phones failed, shelters and evacuation centers were left with no communications. During the night, several shelters found themselves in serious trouble. One shelter was flooded by the storm's surge, requiring adults to place children on available tables, and another shelter lost a section of its roof.

As the storm moved away from the coast, the coastal towns were left with patchy communications and attempts to piggyback additional traffic onto undamaged communications facilities.

Over the next two days, communications became a major hurdle in dealing with the storm's aftermath. Whole sections of Horry county were left with no public service communications. Surfside Beach and Conway, the only two with undamaged tower facilities, could not reach public service personnel over wide areas of downtown Myrtle Beach.

Three of the four downtown fire stations could not communicate with dispatch. Three of the five hospitals were left with no communications with personnel in the field.

And, since many personnel had evacuated before the storm hit, even finding enough employees to man the few remaining facilities became a problem. The roads leading back into the area were blocked with traffic - many simply parked their cars in the roadway and slept in them until the roads were reopened several days later. This traffic jam prevented many public service personnel, hospital personnel, and utility personnel, from quickly returning to the area.

Prior to this storm, ham operators were not included in the existing disaster planning. Some operators in the surrounding area, those who actually could find their way back into the area, did step in to help. For example, ham operators became the sole communications system for area hospitals for well over a week.

By the second day, National Guard personnel began arriving in the area. They brought two generators with them and five radios, three of which only operated on military frequencies. However, by this time, the communications problem had mostly been resolved, with more restored in the coming days.

In addition to major changes to the existing public service communications system, including better locations for towers and more overall redundancy in the system, ham operators have been well incorporated in future disaster planning. This includes the appointment of a ham coordinator to work directly with the civil defense office, and the involvement of hams in all disaster training exercises. Hurricane Hugo taught one important lesson - no matter how much planning, one cannot foresee every possible outcome. Ham operators will be there to fill in those unforeseen gaps next time.

I'd think so, given that we lost five hours last year. I don't think we
can depend on 15m this year so we'll have to hit 80m a bit harder.

I used to love SS but haven't even given it a shot since returning to
the states. CQ WW (both modes) is still my favorite, followed by the CQ
160 'test.

Pretty nice lash up. I'd like to try a vintage Field Day using a QSL 60
and the FB-7 or mebbe even the pre-war HRO.

> Whole thing was built in the case from a defunct National FB-7. Back then BAs
> were a dime a dozen. Betcha he wishes he'd left the FB-7 alone!

Lord, yes! I love the old National stuff. I still run my SW-3 on a
homebrew supply but an OT sold me an original FB-7 supply a few years
back so I retired its homebrew power supply.

Nobody said he was. Somebody said he wasn't.

> Len knows about radio, yet isn't allowed to comment
> on radio here.

This forum isn't about "radio". It is about "amateur radio" and Len has
posted until his fingers bleed. He just can't get any respect. He's
the r.r.a.p. Rodney Dangerfield.

> If he should, he is unkindly reminded that there is a
> difference between military and commercial RF and amateur RF.

He's reminded that there is a huge difference between
military/commercial operation and amateur radio. He's reminded that
there is a series of exams for becoming a radio amateur and that he
hasn't passed any of 'em. He is a non-participant.

> > > > > > > > > And I don't think Phil considers himself my mentor.

Yeah and no one has stepped up to confirm my story that I was never in
Cambodia or that I never took oboe lessons. That's quite a reach your
attempting there, Brian. Don't reach too far or you'll find yourself
out of your tree.

> Maybe you cheated and now think everyone else is cheating, too.

I did touch an oboe once.

> especially when you've been informed by a frenchman what their legal
> 6M bandwidth was.

I'm not required to know or care where French stations operate. I
didn't operate from France. I assume that French stations may use the
same bandwidth on 6m that they can use on 10m.

Understood.

>The only suggestion I have received in e-mail was to somehow generate the
>tone sequence that comes out at the beginning of the "disconnected number
>message."
>(I have yet to find out what that sequence of three [multi-]tones is.)
>
Consider calling a known-disconnected number and recording the tones, then
comparing each with those from a TT phone?

Seems to me that instructing all repeater users to give the message

"You're in violation of 47 CFR 97.113. Do not call this number again. Take
this number off your list and inform your superiors to remove it from all of
their lists."

or something similar, then hanging up, and having them actually do it would
satisfy FCC requirements.

Over the past few weeks I have started answering all telemarketer calls with
"We are not interested. Do not call this number again. Take this number off
your list and inform your superiors to remove it from all of their lists." and
the number of calls has dropped significantly. YMMV

I don't doubt that one bit, Dan. But, WWWIII or not, the crap in the Middle East is bigger, longer, harder than anything that "we" have ever confronted before. If we are at WWWIII, we'll be at war for the rest of history. And, we don't have any business, wherewithal, or capability of changing anything over there.

Yeah, well, the US government doesn't have a history of being able to pull
that kind of trick. And, the US Govt. doesn't have a history of commanding
the military in such an artful manner.

>
> I see no alternative to a large American army in place in Iraq for many

I say let them have their war. When the dust settles, we'll see what there
is to deal with. And, by taking that attitude, maybe the rest of the world
would realize that that the United States ain't playing on their streets any
more.

>
> NONE of the ARAB states really give a rip about the USA. We are simply a

Well, that's my preference, too. And, the USA isn't such a big consumer of their oil--if we are to believe that Venezuela is our major source of imported oil as has been stated and reported.

>
I dont agree with that one bit. Part one; We took on both the Empire of Japan and Nazi Germany at the same time. And we came real close to losing that one.

This deal with the middle east is not, AT THIS POINT, that serious. And with our capabilities there is NO COUNTRY in that area that actually is a serious military threat. Which leads us to this.....

If we dont act now and neutralize the threat of those countries CONTINUING to export terrorism against not only the USA but ALL western nations...with the exception of their good buddies the French, or course. Then we will have a MAJOR problem.

I agree with President Bushs plan of prememptive strikes. Its about time we had a administration that knows what its PRIMARY JOB is.

What is that you may ask?

" To preserve and protect the constitution of this country, from all enemies foreign and domestic"

The Presidents primary job is to protect this country...PERIOD. Something Clinton totally ignored.

Don't beleive me? Clinton set up the useless agreement with North Korea....1994. With the primary assistance of another loser, Jimmy Carter. Lets not even discuss the computer and high tech stuff sent to China.

And how about Clinton letting Bin Laden slip away while he was busy getting 'nonsex' from Monica?

The whole bunch of them needs brought up on charges of High treason.

Now this administration has to deal with it all. And deal they are. THANK GOD.

Dan/W4NTI

>I guess that depends on how bad we really want what we say we want. A free
>Iraq and a non-secular, Iraqi elected government.

I think you mean a "secular" govt., Dan. Or perhaps I've got the definitions mixed up. The concept I think we're both talking about is a govt. that is not aligned to a particular religious sect.

The problem with that concept is that it has a very bad history in Iraq. SH's govt only paid lip service to Islam. Religious leaders who dared to oppose his govt. were persecuted. End result: When he was under attack, not many religious extremists came to his aid.

>
>It could disintegrate into a US 'selected/appointed' strongman with the US
>providing the military and financial support. Gee, where is Nuguyn Van
>Thieu when we need him, eh?
>
EXACTLY!

>See my point?
>
Sort of.

The big problem I see is that a lot of "Iraqis" don;t see themselves that way. They define themselves first as Sunnis or Kurds or whatever. "Iraqi" is an identity forced on them.

If what the "Iraqi people" really want is to split up their country along religious/ethnic lines, why not? Who has posed the greater threat to the USA - fundamentalist Iran or SH's fascist Iraq?

I say we let them have the kind of country they really want, as long as it doesn't threaten the USA. How many Americans fought, died and were injured to prop up Thieu's govt.? How much of a threat has Vietnam been since that govt. fell a quarter century ago?

Amateur Radio Newsline™ Report 1341 April 25, 2003

(Note: This is the first ever Amateur Radio Newsline report anchored from outside of the United States. It was recorded in Auckland, New Zealand by Jim Meachen, ZL2BHF)

**

The following is a Closed Circuit. Newscast 1341 follows immediately. Here is Amateur Radio Newsline Support Fund administrator Andy Jarema, N6TCQ.

--

Amateur Radio Newsline is still on the air. It's still on the air because staff members paid the bills out-of-pocket. This obviously, cannot continue. These people are not Bill Gates, Warren Buffet, or even Michael Jackson. These are your everyday working people who believe so strongly in the mission of Newsline, that they will support it with hard-earned dollars.

We at Newsline need for you, our listening audience, to believe in that mission, too. To believe enough to help keep these newscasts on the air. To show your thanks to the volunteers that keep the latest in Amateur Radio news coming your way.

The address for the Newsline support fund is: Newsline, PO Box 660937, Arcadia, CA 91066.

Again, as always, thank you for your belief, and for your support.

--

Thank you Andy.

**

Amateur Radio Newsline report number 1341 with a release date of Friday, April 25 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Bad news for United States hams who like high fidelity single sideband, good news for New Zealand hams worried about restrictive R F exposure laws and the Dayton Hamvention says that it plans to stay where it is. Find out the details on Amateur Radio Newsline report number 1341 coming your way right now.

(Billboard Cart Here)

**

A CLASH OF IDEALS: BE CAREFUL IF YOU RUN WI-FI

A sour note for hams running what some call high fidelity single sideband. It comes in a regulatory advisory letter from the FCC. Amateur Radio Newsline's Paul Courson, WA3VJB, reports from Washington D.C.

--

The letter from FCC enforcement counsel Riley Hollingsworth went out to a list of licensed hams who favor what some call enhanced SSB, which is sometimes nicknamed upper wideband and lower wideband, characterized by extended low end response, a clean mid-range, and expanded treble or high-end crispness.

While their passion is to experiment toward exceptional audio quality with their voice transmission and reception, the experiments have been a flop with some other hams near their frequencies of operation.

Hollingworth said the Commission has received a number of complaints, and that his advisory letter is intended to inform them that the complaints claim the bandwidth of these stations is wider than necessary and contrary to good engineering practice.

The FCC letter did not cite these stations for any violations, and acknowledged that a precise measurement can be somewhat complex. But he encouraged each operator to be aware that it can be "extremely inconsiderate of other operators" to employ what Hollingsworth described as wide-band overly processed audio, especially when, in his words, such audio is combined with high intermodulation distortion generated by certain amplifiers.

Two of the hams who received the letter quickly responded to Hollingsworth. John Anning, NU9N, told the FCC that single sideband does not have to sound like a tin-can anymore, and cited the enhanced audio available from the latest manufactured transceivers from Kenwood and Yaesu, as well as the popularity of external audio augmentation marketed to the amateur community from Heilsound and W2IHY. Anning said his station does not splatter, has low distortion, and is not overly processed. He suggested the problem of splatter and excessive bandwidth from distortion products is far more common on the phone bands during any contest weekend.

The other hi-fi ham sharing his response to the FCC advisory letter is Paul Christensen, W9AC. He told Newsline he is puzzled by the letter since he's been off the air the past six months. Christensen said the letter may have been prompted by a group he characterized as "a half dozen tightly-knit, pandering individuals."

Both men who spoke with Newsline compared the experiments with wideband SSB to the activity of AM, which itself has enjoyed rising popularity and has been getting favorable press in QST, Electric Radio, and Popular Communications. By contrast Hollingsworth has reportedly expressed his belief single side band was developed as a mode with spacesaving advantages, with necessary tradeoffs in audio quality as a presumption with its use in the amateur service.

Again, the advisory letter carries no enforcement sanctions. But Hollingsworth told the stations such complaints can trigger petitions for rulemaking asking for constraints on such activity that the recipients of the letters had better keep in mind.

Reporting for Newsline, this is Paul Courson, WA3VJB, in Washington

--

In preparing his report WA3VJB did contact the FCC’s Riley Hollingsworth. Hollingsworth told Courson that he honestly does not think these letters have any bearing on those hams who operate AM stations altho he admits thart he is getting that question. But he says that in his view, there is no need whatsoever for A-M'ers to be concerned. (ARNewsline™, WA3VJB)

**

RADIO LAW: RF EXPOSURE LIMITS DOWN-UNDER

Some good news for hams down-under. This as the Palmerston North City Council favors Amateur Radio on a proposed plan to change local Radio Frequency exposure limits.

According to Mike Newman, ZL1BNB, the Palmerston North council has declined to accept the recommendation of the New Zealand Department of Health to adopt its testing and reporting proceedures. The Council instead adopted the less stringent emission exposure levels set out in an earlier New Zealand standard as being the maximum levels which can be generated by transmitting equipment within the Palmerston North City boundaries.

In taking this action the Palmerston North city council declined to support the government recommended approach which would have required local radio amateurs to carry out the expensive R F exposure evaluation process. Numerous amateur operators and representatives of the nations national Amateur Radio Society -- the N-Z-A-R-T -- testified in support of the measure that was adopted. (NZART)

**

RADIO LAW: CANADA NEW TOWER LAW REVIEW COMMITTEE

Back in North America, Canada’s Minister of Industry, Alan Rock, has announced the appointment of a National Antenna Tower Review Committee. The Committee will be made up of municipal officials, as well as industry, health and academic experts.

The new committee will be chaired by David A. Townsend. Townsend is a Professor of Law at the University of New Brunswick and has authored a previous study on antenna support structures.

And while the announcement outlines the composition of the new Canadian tower committee it does not give the target dates for the submission of inputs or the method by which information can be provided. Radio Amateurs of Canada, that nations national Amateur Radio society says it plans to participate in any policy review affecting Canadian ham radio operations. (RAC)

**

Break 1

From the United States of America and Auckland New Zealand, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the N9AKN

repeater serving Milwaukee Wisconsin.

(5 sec pause here)

**

ENFORCEMENT: RADIO STATION DINGED FOR $9000

A $9,000 fine against WRKQ - AM in Madisonville, Tennessee, has been affirmed by the Federal Communications Commission. The regulatory agency says that WRKQ allegedly failed at least once to identify itself by call sign. Also that it operated at night with daytime power and failed to adequately attenuate its second harmonic.

The harmonic is a rather interesting issue here. WRKQ operates on 1250 kHz. The FCC says that it's second harmonic falls squarely on WWV's authorized frequency of 2.5 MHz. The FCC says that it measured WRKQ's second harmonic down at only -55 dB per centimeter whereas -70 dB is required by the rules.

You can read more on the web at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-03-1033A1.doc (CGC)

**

ENFORCEMENT: YOU CANT SAY THAT ON THE AIR - IN ANY LANGUAGE

The FCC is looking into what a California ham may have said on the air. The agency's Daryl Duckworth, NN0W, explains:

--

Duckworth: "Julio Cedeno, N2GRM, of Hollywood California has 20 days to respond to an inquiry concerning both Spanish and English communications from his station operation on 14.322 MHz on March 5th and March 9th of this year. The transmissions contained threats to another amateur as well as language prohibited by the Commissions rules."

--

In its letter the FCC noted directed that N2GRM specifically address the threats in the transmissions as well as the language. The regulatory agency says that threats made against other licensees are viewed very seriously by the Commission. It also told N2GRM that his response will used to determine what enforcement action the FCC may take in this matter.

**

ENFORCEMENT: YOU CANT SAY THAT ON THE AIR

An Eastlake Ohio ham has also heard from the FCC. On March 18th the regulatory agency issued Dave K. Childers, N8QGI, a warning letter regarding transmissions purportedly made by him last December on 27.115 MHz.

For those of you not aware, 27.115 MHz is also known as Class D Citizens Band channel 13 in regions governed by the FCC. In its note, the government agency did explain its position -- upheld by the courts -- regarding its ban on the

type of language Childers is alleged to have used.

The agency also ordered Childers to respond within 20 days from the date of its letter to him. The FCC also told him that his response will be used to determine what enforcement action to take in this matter.

**

HAMVENTION 2003®: WE PLAN TO STAY AT THE HARA

The Dayton Hamvention hopes to stay at the HARA Arena well past 2003. So says the event's General Chairman, Pat Neff, N8IGS. He tells RAIN's Hap Holly, KC9RP that the rumors of a move are simply not true:

--

Neff: "I can't tell you where the rumor is being propagated from but I can tell you that we are in negotiations for future years at HARA Arena and the only difference is that we are really not looking to have a long multi-year contract anymore. We want to be able to have a shorter length contract so that it could be better advantageous to us from a bottom-line aspect."

--

Rumors of a move away from the HARA Arena or that the HARA had been sold seem to pop up every year. Newsline even heard one being circulated at the recent N-A-B show in Las Vegas. And like all before it over the years, this rumor was as phony as the rest.

But the real bottom line is what Pat Neff says -- and we quote: "As much as the city of Dayton is associated with the Hamvention, HARA is associated with Hamvention." And to paraphrase another very famous ham -- thats the way it is! (RAIN)

**

HAMVENTION 2003®: HEAR MORE ON RAIN

By the way. You can hear more about the plans for Hamvention 2003 with Pat Neff, N8IGS, on this weeks RAIN Report. Its on-line right now in streaming audio at www.rainreport.com. Or, if you are Internet deprived, you can dial in on your phone to listen. The number in Chicago is area code 847 827 RAIN. Thats 847 827 7246. (RAIN)

**

HAMVENTION 2003®: DAYTON REMEMBERS THOSE WHO HAVE PASSED ON

Still with Hamvention related news, last week its planners announced the major award winners for 2003. And from time to time the Hamvention also recognizes the contributions of hams who have passed on but left their mark. Roy Neal, K6DUE, reports:

--

Dating back to the days when we hams talked in Morse code and used keys instead of microphones to talk, we hams call our friends who have passed on as Silent Keys'. The term is one of endearment and respect for those radio amateurs who have lead the way. And in keeping with this long tradition, the planners of the 2003 Dayton Hamvention have paused to salute a number of special people whose lives have helped to make ham radio a little bit better.

The first being saluted by Dayton is Joseph Carr, K4IPV, of Falls Church, VA. Carr became a Silent Key on November 25, 2000. During his lifetime K4IPV authored over 85 books and nearly 700 articles covering electronics and technology. He also contributed monthly columns and articles to many popular Amateur Radio magazines.

Al Gross, W8PAL, of Sun City, Arizona became a Silent Key on December 21st, 2000. For those not aware, Gross brought the world such indispensable wireless communications devices as the walkie-talkie, the pager and cordless telephone.

A name that many Amateur Radio Newsline listeners will remember is that of Bill Orr, W6SAI. Bill became left us on January 24, 2001. He was best know for his voluminous publications for radio amateurs, including "The Radio Handbook", "The Beam Antenna Handbook" and many more. He was a good friend to me and to many other hams.

Raymond Ortgiesen, WF1B, was another major contributor to today’s ham radio way of life. He authored “RTTY,” the leading contest software for digital modes.

Ernie Hudson, KI8O, of Dayton, OH became a Silent Key on 8/2/2002. Hudson was a member of the Dayton Red Cross and acted as the Montgomery County Emergency Coordinator and Assistant Coordinator for a number of years. Hudson’s passion was helping people. His efforts focused on public service and disaster relief while also introducing many young people in Amateur Radio.

Finally there are the Columbia Astronauts who perished earlier this year. Three of them were hams. David Brown, KC5ZTC, Kalpana "KC" Chawla, KD5ESI and Laurel Clark, KC5ZSU, who died along with crew-mates Rick Husband, Willie McCool, Michael Anderson and Han Ramon when Columbis disintegrated over Texas during re-entry.

The Dayton Amateur Radio Association says that through the Space Amateur Radio Experiment and the Amateur Radio on the International Space Station programs, ham radio has enjoyed a special relationship with the Astronaut Corps. It is for their dedication, their role in scientific advancement, and their love of their dreams that the Dayton Amateur Radio Association and the Hamvention have made this very special award this award to the crew of the space ship Columbia on its STS-107 last mission.

For the Amateur Radio Newsline, I’m Roy Neal, K6DUE, reporting

--

The announcement of these special remembrances is on the events website at www.hamvention.org (Hamvention 2003®)

**

HAM HAPPENINGS: T-HUNT TIME

And speaking about things that happen in the spring, its T-Hunt time again. Here’s Joe Moell, K0OV, with the latest:

--

Are you looking for some new outdoor ham fun for the spring and summer months? Join your fellow hams who are tuning up their radio direction finding (RDF) equipment in preparation for the hidden transmitter hunting season.

The CQ Magazine National Foxhunting Weekend will be May 10-11, a time when foxhunters from around the country go on their favorite kind of RDF adventure. It could be a mobile T-hunt. When you set out in your RDF-equipped vehicle, you never know where you'll end up and you don't know what you'll find.

Other hams prefer their foxhunting to be all on foot in a big park. They call it foxtailing, radio-orienteering or ARDF. There's an internationally recognized set of rules for this kind of hunt, which takes place in about 30 countries around the world. Stateside hams will host competitors from some of these countries at the Third USA ARDF Championships in Cincinnati, Ohio beginning July 31.

Of course your club can make up its own transmitter hunting rules. The important thing is to make plans now for transmitter hunting on May 10 and 11, the National Foxhunting Weekend. There are more foxhunting opportunities coming up, and I'll be telling you about them in another report soon. You can read about foxhunting and the National Foxhunting Weekend at my Web site: www.homingin.com. That's one word "homingin" --- homingin.com.

From southern California, where there's some kind of transmitter hunt almost every weekend, this is Joe Moell, Kay-zero-Oscar-Victor, for Amateur Radio Newsline.

--

Again Joe’s website is www.homingin.com. And homingin is one word. (ARN ewsline™, K0OV)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the Auckland New Zealand and Los Angeles California, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

HAMS HELPING HAMS: DISTANCE LEARNING - AMATEUR RADIO STYLE

The Nacogdoches Amateur Radio Club, in Nacogdoches Texas recently solved a big problem using what it calls typical ham radio ingenuity. This, when John

Fullingim, the person who was supposed to talk at their meeting could not get a ride out from Dallas about 180 miles away

Fullingim¹s program was a Power Point Presentation consisting of a series of slides accompanied by live commentary. Rather than cancel the April 2nd meeting, Fullingham e-mailed the Power Point to Army Curtis, AE5P, in Nacogdoches. Curtis loaded it onto his laptop computer for showing at the meeting.

Next, a communications link was then established between Nacogdoches and Dallas using both the Internet and Amateur Radio courtesy of Jeff Clark, K5NAC and Kevin Anderson, KD5CCH. And on the meeting night Curtis ran the slide show in Nacogdoches as Fullingim in Dallas provided commentary using the specially installed system.

The two way link also allowed questions to be asked from the live audience. This remote program lasted almost 90 minutes, and was very well received by everyone present at the meeting. (KD5ING)

**

NEW HAM TECHNOLOGY: RIMIGATE VER 0.2 NOW AVAILABLE

Sean Jewett, KG4NRC, of Antioch, Tennessee has announced the availability of version 0.2 of his RIMiGate application program. This is a freely available Linux based APRS I Gate server.

Version 0.2 is quite a bit different from the earlier release. Users no longer need to have a Linux system to build RIMiGate. RIMiGate is now distributed as a disk image that can be written to disk using freely available tools for Linux, Windows, and Macintosh. In addition, the configuration files now reside on an M-S DOS based file system so users can easily edit configuration files.

The minimum requirements for RIMiGate is a 486 system with a minimum of 12 megs of ram. You can download the program from the http://www.rimboy.com/rimdistro/rimigate/ (KG4NRC)

**

HAM RADIO IN SPACE: AN AO-40 UPDATE

The AMSAT Oscar 40 satellite is continuing to drift downward as was predicted by its controllers. Unfortunately, this makes for bad satellite conditions that are less than favorable for passband use.

Also, the solar angle is worsening and will soon exceed 45 degrees. This will limit satellites available power while warming the spacecraft considerably as the sun swings across it.

Because of these factors, AO-40’s passband transmitters were be turned off on Saturday, April 19th. They will remain off for about 4 weeks or until conditions improve. (ANS)

**

INTERNATIONAL -GERMANY: DEUTSCHE WELLE GOES DIGITAL

Germany's international broadcaster, Deutsche Welle, has announced that as of June it will transmit digitally on shortwave to Europe and the Middle East using the Radio Mondiale broadcast system. This makes Deutsche Welle the first international broadcaster to commit to a start date for regular D-R-M transmissions on the shortwave bands. (ASWLC)

**

OUR HERITAGE: INTERNATIONAL MARCONI DAY

Saturday, the 26th of April, was 'International Marconi Day'. International Marconi Day is a 24-hour on-the-air event held annually to celebrate the birth of Guglielmo Marconi in 1874. Its also an opportunity for amateurs around the world to make contacts with historic Marconi sites to gain an award for working a specific number of participating stations.

At least 35 special event stations were to be on the air for International Marcoini Day 2003. This included the famed W1AA slash MSC Marconi Radio Club representing the Marconi 1901 Siasconset Station on Nantucket Island in the USA. There were also around 15 United Kingdom sites slated to be on such as Poldhu in Cornwall and Alum Bay on the Isle of Wight and Chelmsford in Essex. Other historic stations include VO1IMD from Signal Hill, Newfoundland, and IY4FGM from Marconi's birthplace near Bologna Italy. (MSC ARC, GB2RS)

**

DX

In DX, the RSGB reports that the International Short Wave League's VHF club callsign, MX1SWL, is being used by Tom Read, M1EYP, through the end of April. Tom will be activating several hilltops, particularly in the Pennines, for the Summits On The Air awards program. (GB2RS)

And F0 slash F8CFU planned to be on from the Tuamotu Archipelago in French Polynesia and Tubuai Island in the Austral Islands through the 16th of May. QSL as directed on the air. (GB2RS)

Also, the former 7Q7DC, has now moved to Nairobi and has been given the call 5Z4DE. Don is the first United States citizen in 12 years to obtain a Kenyan license and will be active as soon as he puts his antennas up. (OPDX)

Lastly, word that 4Z4DX, will be active on 160 to 6 meters CW and digital modes as 9N7DX from Nepal through the 12th of May. Again, Q-S-L as directed by the operator. (OPDX)

**

THAT FINAL ITEM: HAM RADIO ADVENTURE TO THE SOUTH PACIFIC

And finally this week, how about a ham who has decided not to let age stand in the way of her passion to sail and to operate from rare places. Amateur Radio Newsline’s Bruce Tennant, K6PZW, reports on a truly amazing lady:

--

Susan Meckeley, W7KFI, is 69, loves ham radio and loves to sail. And she recently told the Ohio-Penn DX Newsletter that she is headed to the South Pacific on as three-year DX'pedition odyssey.

Meckeley left Oakland, California, in January and has been slowly working her way south. At that time she spore with OPDX Meckeley was in Mexico and soon to sign W7KFI slash maritime mobile. She has already been to Ensenada, Mexico, for a month, but set sail on April 16th, for San Jose, Punta Cabras.

Heading south, Meckeley told OPDX that she would be operating from the Isle San Martin. She was heard April 17th at 24:41 UTC as XE2/W7KFI on 14.249 MHz from the island. The length of her stay is not known.

Her next stop will be at Bahia de Torguga and from there to Magdelina Bay, Cabo San Lucas, and finally La Paz. Then it is off to the islands in the Sea of Cortez for operating and into Guymas for the hurricane season. Come fall she will go down the mainland coast ending in Costa Rica. In April 2004, Meckeley is off to Galapagos Islands and into the South Pacific.

When she's on the air its with a Yaesu FT-847 and a pair of pop-up masts. She runs all modes except ATV from her 1932 Challanger called the S/V Dharma. She tells OPDX that -- and we quote -- "this size boat I can handle all by myself." And it sounds as if Susan Meckeley, W7KFI, is making her dream come true.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

One last note. Meckeley told OPDX that she has room on board for a crew-member if anyone wants to go. If interested, let OPDX know and the newsletter will forward the message. The e-Mail address is kb8nw@arrl.net (OPDX)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, a reminder that the nominating period for the 2003 amateur Radio Newsline Young Ham of the Year is now open. No significant changes from last year. Nominees must be 18 or younger. Full rules and an application is on our new special website at www.yhoty.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Meachen, ZL2BHF, in Auckland, New Zealand saying 73 and we thank you for listening."

In article <BAD0C173.17B7C%stewart@say.net>, Dwight Stewart <stewart@say.net>
writes:

>> There IS a cure for tunnel vision, Dwight. In order
>> to effect a cure you have to get out of the tunnel
>> into reality and learn how the rest of the world uses
>> radio. Now. Don't rely on myths and legends of the
>> 1912 sinking of the Titanic. This is 91 years later.
>
> Okay, lets see that reality by looking at a real disaster - one I was
>directly involved in. In 1998, Hurricane Hugo hit the North Carolina, South
>Carolina, and Georgia coasts. In the hours leading up to this storm's
>landfall, most residents evacuated this area, including the employees at
>most television and radio stations.

Just the same, us in other parts of the USA could watch TV
journalists' video and sound from INSIDE the hurricane area,
night scenes still lit by street lighting still operational despite
terrible winds. Obviously there wasn't anything close to a
"most evacuated" condition of broadcast personnel...someone
held the TV cameras, others manned the relay truck...and
someone must have been at the power stations keeping the
electric power on for the communities.

> In the days leading up to landfall, public service communications was
>filled with traffic dealing with evacuations, accidents, and getting
>hospital patients to other inland hospitals. During this same period,
>private utility communications was filled with traffic dealing with storm
>preparation, shutting down utilities in certain areas, and in re-enforcing
>certain key utility systems and subsystems.

Thanks to the National Weather Service, affected hurricane areas
get days of warning. Hurricanes seem to be a regular seasonal
event in the east and residents there have, literally, centuries of
experience to plan accordingly.

Other emergencies such as earthquakes, industrial explosions,
wildfires do NOT have any warnings, have NO chance for
preparation of the affected areas.

> At this point, it should have been obvious the system would soon be
>overwhelmed. Employees at dispatch centers were already working overtime and
>many of those would evacuate as the storm approached.

ALL emergency conditions require ALL to work more than regular
hours.

> From this point on, we'll look at just Horry Country in upper South
>Carolina since that is where I was located. As the storm hit, public service
>personnel hunkered down to wait out the storm as communications started
>failing over a wide area. This included the police/fire communications tower
>in Horry County, most cellular towers in the coastal areas, and many towers
>belonging to utility companies.

Compare the relative populations of Horry County in South Carolina
versus Los Angeles, Orange, Riverside, and Ventura Counties in
California all affected by the Northridge Earthquake.

> Only one television and one radio station remained on the air during the
>storm. The television station lost its tower about two in the morning (an
>hour after first landfall), leaving only the one radio station on the air
>for the next two days.
>
> As phones failed, shelters and evacuation centers were left with no
>communications. During the night, several shelters found themselves in
>serious trouble. One shelter was flooded by the storm's surge, requiring
>adults to place children on available tables, and another shelter lost a
>section of its roof.

Did "most" amateur radio antennas miraculously remain standing
while all those commercial towers fell?

> As the storm moved away from the coast, the coastal towns were left with
>patchy communications and attempts to piggyback additional traffic onto
>undamaged communications facilities.
>
> Over the next two days, communications became a major hurdle in dealing
>with the storm's aftermath. Whole sections of Horry county were left with no
>public service communications. Surfside Beach and Conway, the only two with
>undamaged tower facilities, could not reach public service personnel over
>wide areas of downtown Myrtle Beach.

Those of us in the rest of the USA who watched that hurricane's
progress on live TV were made aware of the problems.

Seems that national TV news networks were there and
communicating live without all the "hurdles."

For how many decades have communities in this region experienced
other hurricanes? How much planning and organization have gone
into emergency preparation?

> Three of the four downtown fire stations could not communicate with
>dispatch. Three of the five hospitals were left with no communications with
>personnel in the field.
>
> And, since many personnel had evacuated before the storm hit, even finding
>enough employees to man the few remaining facilities became a problem. The
>roads leading back into the area were blocked with traffic - many simply
>parked their cars in the roadway and slept in them until the roads were
>reopened several days later. This traffic jam prevented many public service

>personnel, hospital personnel, and utility personnel, from quickly returning
>to the area.

The rest of us in the USA saw the gridlock on live TV.

> Prior to this storm, ham operators were not included in the existing
>disaster planning. Some operators in the surrounding area, those who
>actually could find their way back into the area, did step in to help. For
>example, ham operators became the sole communications system for area
>hospitals for well over a week.

No doubt by "CW" on HF and using the NTS?

We are waiting for the announcement that the HF antennas were
all still up having miraculously survived the winds and rain while all
the commercial towers fell, damaged beyond repair...

> By the second day, National Guard personnel began arriving in the area.
>They brought two generators with them and five radios, three of which only
>operated on military frequencies. However, by this time, the communications
>problem had mostly been resolved, with more restored in the coming days.

Did they get through the gridlock on highways or did they go
cross-country to get there?

"Military frequencies" on HF are interleaved with commercial and
government frequencies. Military HF radios can tune to any
frequency between 2 and 30 MHz. Military VHF radios can tune
over the entire amateur 6m band. Was the South Carolina
National Guard using radios purchased from K-Mart?

> In addition to major changes to the existing public service communications
>system, including better locations for towers and more overall redundancy in
>the system, ham operators have been well incorporated in future disaster
>planning. This includes the appointment of a ham coordinator to work
>directly with the civil defense office, and the involvement of hams in all
>disaster training exercises. Hurricane Hugo taught one important lesson - no
>matter how much planning, one cannot foresee every possible outcome. Ham
>operators will be there to fill in those unforeseen gaps next time.

So, one region of South Carolina "got taught a lesson" in 1998.
How long has that region undergone hurricanes? Never before?
Has Horry County, South Carolina, been cut off from the rest of
the USA for a long time?

California ACS has been organized longer, incorporating MANY
other radio and communications services in its auxilliary
umbrella of organization and planning. The Greater Los Angeles
emergency planning could incorporate amateur radio into its
over-decade-long existance for communications but has managed
well enough without it through a Real Emergency that had NO
warning whatsoever at a bit after 4:30 AM on 17 January 1994.

So far, Dwight, all you've done is a lot of "pep rally rah-rah" about US amateur radio largely to an audience mostly made up of other radio amateurs. That's the wrong audience for addressing REAL emergency planning, organization, preparation, and training.

Real Emergencies aren't games of sport, one "side" against "another." Real Emergencies are survived by ALL working together. Real Emergencies require organization, planning, preparation, integration, and training using ALL available resources.

Real Emergencies aren't survived by high-fiving pep rally fantasies of winning over "the other side" or by a lot of mythical tales and urban legends where amateurs and amateur radio miraculously survives while all commercial and government radios and equipment fails. Real Emergencies aren't planned for by pipe-dreaming heroic acts of aid that haven't happened except in imagination.

Real Emergencies are survived by hard-nosed pragmatism based on past experiences of everyone. Real Emergencies are survived by ignoring the over-inflated egos of certain minority groups who've psyched themselves into an imaginary nirvana of self-importance before anything has happened.

The United States of America has undergone many and varied Real Emergencies besides war and politics over the last half-century. All of it has been recorded, noted, indexed, archived and IS available for reference. It isn't locked up in some guru vault in Newington or archived solely in a collection of amateur radio weekly newsletters. Real Emergency situations aren't a local thing exclusive to one coast or any region.

In article <BAD0C15D.17B7C%stewart@say.net>, Dwight Stewart <stewart@say.net>
writes:

> Certainly larger cities are better equipped to deal with the disruptions
>following a disaster, but even the largest cities may struggle with this
>problem during a serious disaster and that is even more so the case for
>smaller towns.

No one can forsee true disasters but there ARE ways to plan
for emergencies of a large sort. The greater Los Angeles area
(includes over 70 incorporated cities) has done this and it works
out well. That covers a population of about 10 to 12 million.

> I think we're talking about different types of disasters here. What you
>say is perhaps true for small, isolated, incidents.

A Richter 6.3 earthquake with a total cutoff of all electrical power
is classified as a "small, isolated incident?!?"

17 January 1994. I was here and rode it through. The President
and some of his staff visited here to view the damage. Over 50
residents died as a direct result of that earthquake.

If you think that is a "small, isolated incident," then we don't
have anything to discuss, do we?

>But, it is a different
>story when it comes to the serious disaster. In my next message (the second
>one in this two-part message), I describe a common disaster that impacted
>three states. This is not abnormal - an large earthquake along the west
>coast might impact a similar area.

California is one of the larger states in the union and the most
populous of all of them with about 30 million.

Depending on which "states," their total population may not exceed
that of California's population. California is large enough that driving
north-south from border to border takes at least 10 hours steady
driving at maximum speed allowed on interstates. Big place. Not
as big as Texas or Alaska but bigger than, say, Rhode Island. :-)

The Northridge Earthquake of 1994 didn't reach north enough to
affect mid-California. The Loma Prieta Earthquake in mid-state
didn't affect southern California.

> In these larger situations, the telephone system is one of the first
>things to fail. This is caused by overuse by civilians trying to call
>friends and family and damage to parts of that system by the disaster

>itself.

The telephone SWITCHING SYSTEM is simply overloaded by
callers trying to dial out. That isn't "failure," it is just going beyond
the switching system's traffic capacity as designed. The switching
centers did not fail here in any earthquake...they remained working
with everything intact, standby batteries functioning for the length
of the power outages.

The only TRUE failures of the telephone system here in 1994 was to
some above-ground cable runs on utility poles near the epicenter,
perhaps no more than two dozen poles damaged or downed.

Apparently you are unfamiliar with the leased lines that do NOT go
through the switching system. Those were unaffected here. The
fire departments use them for alarms and warnings at the fire
houses.

Despite the alleged "failure" of the telephone system during the
1994 earthquake, I received a call from my uncle in Florida in the
early afternoon of 17 January. No problems on outside-area
calling IN. By noon of 17 January 1994 I could call out on my
residence phone with no problems.

>> Utility services NORMALLY use their radios to effect
>> repairs to utilities. That is in no way different
>>from operations during real emergencies. (snip)
>
> It most certainly is different. Following a disaster, most utilities have
>to call in all employees (vacations and time off ends) and for assistance
>from neighboring utilities to help with the repairs. These extra personnel
>place a huge load on the existing communications system. Needless to say,
>this is not the place to look for supplemental communications.

"Supplemental communications" were not needed in the 1994
Northridge Earthquake. While there was NO advance warning,
off-duty utility workers could indeed get a "wake-up call" without
any on-duty supervisors calling them by telephone. The utilities
here already have contingency plans for which off-duty personnel
to report without notification. Once reported in they are directed
to sites of damage by supervisors who've been notified by mobile
units.

The police departments and some fire departments have similar
plans. A few large corporations do, too.

"Notification" can be done in many ways. One of the ways you
did not cover was broadcast radio and television. All of the major
radio stations here had emergency power (installed long ago).
Broadcast stations' news departments get their information from
many sources (including the "failed" telephone system which,
miraculously worked...go figure) and can relay that to listeners
with portable receivers.

There wasn't any reported "load" on the telephone system from
notifications of utility workers, off-duty policemen, off-duty firemen,
off-duty anyone in city and county agencies. Certainly not a
"huge load" as alleged.

>> It is not appropriate to describe business radio users
>> as "often without (primary) power." (snip)
>
> You go on to describe several groups with radios that could be used during
>a disaster.

Those were utilized here for the Northridge Earthquake.

>While it all sounds nice, there are a number of pitfalls. For
>example, it is the towers of base facilities most often damaged during a
>disaster (the towers of the main communications facilities).

That wasn't reported as happening in this general area during
the 1994 quake. That quake was strong enough to collapse
a multi-story apartment and the new parking building at CSUN
(California State University at Northridge), both near the
epicenter. A number of tall broadcast and PLMRS towers
remained standing...those dot the area all around th epicenter.

The ONLY "tower" with any trouble was a buckled MHV tower
(part of the Pacific Intertie) that caused the 10-million population
area electrical outage. That was propped up quickly by an
earth-moving vehicle for temporary re-start.

Several very high freeway overpass structures buckled and
collapsed, that due to state civic engineers' omission of stress
components during earthquakes when the ground moves AWAY
(down) from the support columns. That has been rectified.

No radio towers were reported to have buckled due to earth
movement. That repeated "commercial towers always fail"
myth failed to materialize.

>Therefore, a
>guy with a mobile business radio in his vehicle isn't going to do much for
>you. The ham operator, on the other hand, can at least get you some type of
>antenna into the air.

That presupposes that hams' antennas are never damaged or that
enough are clever enough, handy enough, equipped enough to get
"something on the air." Note: Radio amateurs were as frightened
as anyone else in the area in the aftermath of the Northridge quake;
had their own families to take care of FIRST.

> Even if you did have a use for people with a business radio in the
>vehicle, there are other problems. For example, a company is never going to
>authorize the participation of its employees because of potential liability.
>And without that authorization, that employee is operating on his own
>without permission to use his employer's radio equipment.

When mama nature plays rock-and-roll without music, that sort
of nit-picky lawyerese thinking isn't at the forefront of anyone's
mind.

> I could list other pitfalls, but that describes the three largest - proper
>equipment, coordination, and liability.

I'd say that applies to individual radio amateurs as well.

>> FAA controlled airspace communications is required to
>> have emergency power for communications. (snip)
>
> Have you been listening to the news recently? The air traffic control
>system is already nearly overwhelmed with a lack of personnel and equipment.
>This is also not the place to go looking for supplemental communication
>equipment or manpower.

I live less than two miles from Burbank-Glendale-Pasadena Airport
(what had been Lockheed Air Terminal long ago). A neighbor is an
FAA executive there in ATC.

Many years ago, the BUR tower had to be evacuated due to a kitchen
fire in the restaurant on the floor below the tower. Both places were in
the old terminal building. Pacific Aeromotive, a service company at the
airport, lent a large truck and radios for the FAA tower's use...which
they did for about three days. Up and talking in about an hour.
Business helping government. No problems from any air traffic or
anything else (except the fire) on a weekend. That was on a
Saturday in the sixties and I heard the first announcement of BUR
tower shutdown over a little civil airways receiver in my workshop;
I walked out to one corner of the back yard and could see the smoke
from the terminal building's center section.

>> What is most often neglected in amateur thinking is the US
>> military capability in short, medium, long, and very long
>> communications paths at a moment's notice. (snip)
>
> Sadly, most National Guard and Air Guard units don't maintain a wealth of
>communications equipment. Their equipment is limited mostly to what is
>needed by that unit during peacetime. When called to active duty, members
>of that unit often join an existing active duty unit with its own radio
>equipment.

Sorry, that just is NOT the case as demonstrated in Gulf War 1 and
Gulf War 2 a dozen years later. National and Air Guards have to
be ready for war NOW, any time. They are so equipped in this state
from what I've seen up-close and personal. I can't speak for South
Carolina.

The common small-unit land-air radio in the US military is the
SINCGARS. About a quarter million sets have been built in the
14 years of production. Those were fielded to ALL Army units
including National Guard units by 8 years after their introduction.
SINCGARS is directly compatible with amateur 6m frequencies

when set to non-secure modes (frequency range is 30 to 88 MHz).

> Furthermore, active duty units, and even Guard units, require permission
>from the chain of command before becoming involved. This takes time, which
>is not something in abundance following a disaster.

California has plans for this and those plans have been proven in
many state emergencies, small to large. Guard units (the real
ones, not the militias) are normally under the "command" of state
administrations but the President of the US can activate them as
needed. The US military has the capability to communicate and
can quickly deploy by many means. See Gulf War 2, recently
in the news.

>These units do often
>eventually arrive to help, but often days into the disaster recovery (when
>the most serious demand for supplemental communications is in the hours and
>days following a disaster).

As I said before, there was little, if any, sign of "supplemental
communications" done by amateur radio groups here during the
1994 Northridge Earthquake. A couple H&W mentions occured
on the news THREE DAYS afterwards.

>> If that isn't enough, the various TV news services can be a
>> source of communications aid (snip)
>
> And they (TV news services) work well in smaller disasters. However,
>following a major disaster, these can be disrupted as much as other
>communications facilities (see example in next message).

If so, it hasn't been reported by ANY news.

Here's an example: Floodings in the Dakota states on south into
the Mississippi beside Illinois and Missouri. Those bothering to
watch CNN during the floodings in South Dakota could see clear
video, hear clear sound from those remote (not close to studio)
locations. At one location there was a National Guard Humvee
in the background, long whips pulled down to the NVIS position.
One of the CNN correspondents was getting "supplemental
communications" through a cell phone while on the air.

Yes, sir, lots of "failure" of all the commercial radios...

> However, I'll repeat what I said before - only ham radio offers a pool of
>licensed operators with equipment capable of reliable local or even national
>coverage, the frequencies, and the regulatory mandate, to truly handle
>supplemental communications following a disaster.

Problem is, the only "news service" reporting all that wonderfulness
is ARRL. ALL the rest of the news media seems to be blind and
deaf to all that terrific "supplemental communications."

I haven't been to every Real Emergency or Terrible Disaster in the
USA. I've been IN a few, much closer than I cared to be. I CAN
distinguish between radio services in terms of equipment and
most people in them. I've yet to SEE and HEAR them in action in
the "hours and days" following an emergency that I was IN...and
so have hundreds of real journalists not seen or heard amateur
radio "supplemental communications" efforts.

I'll grant you there ARE some cases elsewhere in the country, but
most of that "reporting" by ARRL is exaggeration or error by omission
of all the other radio services and businesses helping out in the "hours
and days" following an emergency. As a case in point, I pointed out
news items from electronic trade press about corporations aiding NYC
after 9-11-01 with radios...which was dismissed and dissed in here
because it was not in ARRL spirit of amateur boosterism. ARRL
gives a false picture because it must tunnel-focus on amateur radio.

> It is a package deal - manpower, equipment, available frequencies, and a
>regulatory mandate to offer assistance. No other radio service offers all
>four of those. Why would any state or local government agency pass up all
>that for the patchwork of supplemental communications you describe?

That "patchwork" you dismiss has worked very well in California. Under
California government web pages you can find details of the ACS
as it exists in this state. Other states have adopted that organization
and implementation plan. The ACS integrates all communications
services without regard for ARRL propaganda or the alleged "package
deal" that amateur radio is supposed to provide.

Yes, amateur radio is a part of that, but it isn't primary and it doesn't
rule nor has it worked out as the fabled stories (by amateurs) have
told. Real emergencies and real disasters aren't helped by fantasy,
mythology, propaganda about "package deal" existances...they are
helped by organization, planning, and training done well before any
emergency or disaster exists. ACS is one way of doing that. It may
not be the ultimate or best auxilliary service but it IS realistic and
takes into account as many of the radio services as exist today and
the thousands of already-trained communications specialists in the
state who are not amateurs.

One great problem of fervent amateur organizational-bent hobbyists
is the failure to see the myriad of OTHER communications services
and methods and technology that ALREADY EXISTS. If the focus
of fervent amateurs is too narrow (all too often the case), then it
can't be effective in integration for real emergency work. Amateurs
tend to become competitive, aggressively so at times, with all those
other communications services and haven't come close to playing
their everyday games nor have they the experience, organization,
or training to be qualified to play in real emergencies.

DICK only knows how to run in and take pot shots. Get a life. Rent one if you have to. Try to get one bigger than you are, shouldn't cost that much more.

Actually, I slept on top of a stack of pallets the 1st couple of nights, trying to make sure rats didn't get into my sleeping bag. Mosquitos were bad. First night was at the Mog airfield, the next couple at the former embassy. Then I slept on the floor of an expanded van for about a week. When 10th Mountain finally arrived, we got some temper tents and cots.

If I see some dumass wearing such a t-shirt, I'll be sure to say hi.
I'm curious which Far-side character you most closely resemble.

However, my son and I have a Scouting conflict that weekend.

Brian

The word "putz" is also used in the colloquial term for polish, as
in polishing metal, in German and Yiddish.

The Lieder of the Gang of Four polishes his "replies" so that they
are devoid of substance of the subject and contain only personal
attacks on communicators he doesn't like. The Lieder is not a
song of the heart or soul.

The question of "high fidelity" in amateur voice transmissions
has been addressed by the FCC. See the latest Newsline.

The Lieder of the Gang of Four is above all law and tries to
imply that whatever she says IS the law. SOP. QED.

58,400 plus a few since added were KIA during the VN War.

The reason VN was not a threat is that we basically destroyed the North with our bombing. They were a economic basket case. And we gave them NOTHING to rebuild. Guess its best to be the loser...that way we pay for it all....what a deal.

There is more at stake here than just Iraq becoming a religious freek zone. This is a real chance to change that mess over in the middle east. Whether we call it a democracy or a dictatorship it matters not. Just as long as they are friendly to us. That way we can stay around and keep the idiots elsewhere in check.

I don't believe Rumsfield when he says we are not staying and not into building empires. We have no choice now. We have been elected to be the 'Policeman of the world'. Like it or not.

Dan, my last post to you on this is that you have been approaching your part in this debate purely from a military/militaristic standpoint. As a military might we can probably maintain anything we want anywhere, and I don't differ from you on that.

My point is that we (the USA) have the convenience of being able to have religion on Sundays. For those folks over there, they *live* their religion. And, for those folks over there, we (the Westerners) are the epitome of their definition of an infidel. For the religious zealots over there, that is all it takes to keep the region in an uproar--and we (the USA military/government) aren't capable of breaking through that to change anything over there.

So, you're premise is probably right--we'll be there from now on and we better be ready to pay the taxes and supplement yet one more--or more--country with food, etc.

...and with a tax base and economy the size of some soverign nations, they
have the resources to not HAVE to depend on volunteers.

But they use them anyway...I know. I was one of them.

>> I think we're talking about different types of disasters here. What you
>>say is perhaps true for small, isolated, incidents.
>
> A Richter 6.3 earthquake with a total cutoff of all electrical power
> is classified as a "small, isolated incident?!?"
>
> 17 January 1994. I was here and rode it through. The President
> and some of his staff visited here to view the damage. Over 50
> residents died as a direct result of that earthquake.

His choice of the word "small" was poor, however here you are again trying
to base your entire rant on ONE incident, and even then it's not as convincing
as you'd care to believe.

>If you think that is a "small, isolated incident," then we don't
> have anything to discuss, do we?

Do you ever?

>Depending on which "states," their total population may not exceed
> that of California's population. California is large enough that driving
> north-south from border to border takes at least 10 hours steady
> driving at maximum speed allowed on interstates. Big place. Not
> as big as Texas or Alaska but bigger than, say, Rhode Island.

And a prime example of why your anti-volunteer rants don't hold water. CA
has the financial resources and demographics to support their disaster plan.
Everyone (in SoCal anyway) has the knowledge that they may face such a disaster
and have at least some rudimentary provisions and skills. (Stored water, first
aid kit, battery-powered broadcast radio, etc..)

>The telephone SWITCHING SYSTEM is simply overloaded by
> callers trying to dial out. That isn't "failure," it is just going beyond
> the switching system's traffic capacity as designed. The switching
> centers did not fail here in any earthquake...they remained working
> with everything intact, standby batteries functioning for the length
> of the power outages.

Regardless of the cause, a lack of functionality of a system is a failure
to provide service. You can argue the semantics all day long.

>No problems on outside-area
> calling IN. By noon of 17 January 1994 I could call out on my
> residence phone with no problems.

You would have been able to communicate IMMEDIATELY had you had 2M and a
properly prepared station at home.

And since incomming is unaffected, we'll just engineer the public safety
systems to have repeaters that are outside anticipated disaster areas with
dial-in capability.

That'll be...oh...what? Another $350M or more?

>No radio towers were reported to have buckled due to earth
> movement. That repeated "commercial towers always fail"
> myth failed to materialize.

Who "repeated" that "myth", Lennie?

>That presupposes that hams' antennas are never damaged or that
> enough are clever enough, handy enough, equipped enough to get
> "something on the air." Note: Radio amateurs were as frightened
> as anyone else in the area in the aftermath of the Northridge quake;
> had their own families to take care of FIRST.

Perhaps YOU have to take hour-after-hour to "take care" of them,
Lennie...I guess at your age it's to be expected. I rode out several
earthquakes in SoCal and it never took me more than 10 minutes to make an
assessment and either report back to the base or repsond with ARC, ARES, or the
ER I was working at (PRN) at the time.

>> I could list other pitfalls, but that describes the three largest - proper
>>equipment, coordination, and liability.
>
> I'd say that applies to individual radio amateurs as well.

I'd say that only one out of the three applies, Lennie, that being
liability.

>> Sadly, most National Guard and Air Guard units don't maintain a wealth of
>>communications equipment. Their equipment is limited mostly to what is
>>needed by that unit during peacetime. When called to active duty, members
>>of that unit often join an existing active duty unit with its own radio
>>equipment.
>

> Sorry, that just is NOT the case as demonstrated in Gulf War 1 and
> Gulf War 2 a dozen years later. National and Air Guards have to
> be ready for war NOW, any time. They are so equipped in this state
> from what I've seen up-close and personal. I can't speak for South
> Carolina.

"...up close and personal..."?!?!

BBBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! ! !

MANY Guard and Reserve units are set up just like Dwight said...they are
JUST augmentation units. They don't have their own assets, or have very
little. Are all G & R units like this? Heck no! But some are.

>The common small-unit land-air radio in the US military is the
> SINCGARS...(SNIP)

I just KNEW Lennie would find a way to work SINCGARS into the rant.

>As I said before, there was little, if any, sign of "supplemental
> communications" done by amateur radio groups here during the
> 1994 Northridge Earthquake. A couple H&W mentions occured
> on the news THREE DAYS afterwards.

WHHHHHOA LENNIE!!!

You have REPEATEDLY stated there was NO Amateur Radio involvment and NO
mention in ANY media of ANY sort in the 94 quake!

Dang, Lennie...CAUGHT IN ANOTHER LIE!

Sheesh, you make this easy!

>> And they (TV news services) work well in smaller disasters. However,
>>following a major disaster, these can be disrupted as much as other
>>communications facilities (see example in next message).
>
> If so, it hasn't been reported by ANY news.

Sure it has.

>Here's an example: Floodings in the Dakota states on south into
> the Mississippi beside Illinois and Missouri. Those bothering to
> watch CNN during the floodings in South Dakota could see clear
> video, hear clear sound from those remote (not close to studio)
> locations. At one location there was a National Guard Humvee
> in the background, long whips pulled down to the NVIS position.
> One of the CNN correspondents was getting "supplemental
> communications" through a cell phone while on the air.
>
> Yes, sir, lots of "failure" of all the commercial radios...

Hmmmm....One video byte from a safe vantage point.

Yeah...I am impressed.

>> However, I'll repeat what I said before - only ham radio offers a pool of
>>licensed operators with equipment capable of reliable local or even national

>
> Problem is, the only "news service" reporting all that wonderfulness
> is ARRL. ALL the rest of the news media seems to be blind and
> deaf to all that terrific "supplemental communications."

ERROR WILL ROBINSON, ERROR!

You may even refer to the summary of "media hits" in QST...Ooops..can't do
that...ARRL pub! Excuuuuuuuuse me!

>I haven't been to every Real Emergency or Terrible Disaster in the
> USA. I've been IN a few, much closer than I cared to be.

What? The Dunkin' Donuts at Hollywood and Vine ran out of Bavarian Creme
donuts?

Please cite for the general reading viewers what "disasters" you have been
in, in what capacity, and for how long you were active in that effort, Lennie.

A failure to respond will be read as "I lied".

>I'll grant you there ARE some cases elsewhere in the country, but
> most of that "reporting" by ARRL is exaggeration or error by omission
> of all the other radio services and businesses helping out in the "hours
> and days" following an emergency.

Hmmmmmmm....Interesting. I've read numerous items in QST that mentioned
REACT and ALERT, to name a few.

>As a case in point, I pointed out
> news items from electronic trade press about corporations aiding NYC
> after 9-11-01 with radios...which was dismissed and dissed in here
> because it was not in ARRL spirit of amateur boosterism. ARRL
> gives a false picture because it must tunnel-focus on amateur radio.

Hmmmmm again...QST mentioned those activities. So...?!?!

>Yes, amateur radio is a part of that, but it isn't primary and it doesn't
> rule nor has it worked out as the fabled stories (by amateurs) have
> told.

"Primary"? "Rule(s)" ? "Fabled" ?

Again, please quote those assertions and the authors.

Failure to do so will be read as "I lied".

>Real emergencies and real disasters aren't helped by fantasy,
> mythology, propaganda about "package deal" existances...they are
> helped by organization, planning, and training done well before any
> emergency or disaster exists.

There's nothing fanciful about "package deals" that include Amatuer Radio as supplemental communications.

Otherwise, a point we can agree on!

>ACS is one way of doing that. It may
> not be the ultimate or best auxilliary service but it IS realistic and
> takes into account as many of the radio services as exist today and
> the thousands of already-trained communications specialists in the
> state who are not amateurs.

It works well. They ahve the money and the assets to back it up. Podunk USA could do the same thing with the finances and assets to implement it.

>One great problem of fervent amateur organizational-bent hobbyists
> is the failure to see the myriad of OTHER communications services
> and methods and technology that ALREADY EXISTS.

WHO fails? WHO doesn't take into account these services, Lennie?

Steve

I want to go, out of curiosity. As I am pressured not to go to Ham events, I may not be able to.

As of Monday, I am no longer an EE. I missed my deadline, due at end of this month. Soon however, I will be in a more stable, higher paying (but less glamorous, non EE) field.

So, Hamradio will b just hobee. All so, I have no plans 2 learn Morse code.

Some R glad I M no longer EE, Specially some Hams without EE degree. Also, some of my relatives advised me that EE field not wurth it. Some-1 made a 5 year bet. I would like to make some kind of 4 yr bet.

I have another event I have to go to in May. It is a some kind of ceremony and some things must be followed. For example, the ceremony must be done facing the East direction.

Anyway, I would like 2 C what kind of Hams go 2 Dayton Hamfest. 2 C if Hams there R like other typical Hams I have met B-4.

I had heard that the FCC didn't like it if a caller (possibly a non licensed person) does something that causes a ham transmitter to transmit (even if his voice never reaches the air). I would expect that each member of the repeater club would have a password that he would key in via the touch tone pad on the phone. And when a valid password is entered, that only then is the repeater transmitter keyed up. Thus a telemarketer would never get past. Besides, most telemarketers use automated dialing equipment that screens for answering machines, busy signals and no answers. That equipment will think the repeater is an answering machine and dump the call.

You could install one of those telemarketer zappers you see at radio shack....

]

Seems to me that the repeater should be designed in a manner that incoming calls do not come in to the point of where they are heard over the air and only come across the air if triggered by a set amount of DTMF tones to access that in the first place. Or something along the lines of a pre-recorded "announce-only" message that plays, (not over the air either) and to get past that the control op's would have to type in whatever tone sequence.

Yes, we saw those images leading up to the storm's arrival also, just before the power failed. In fact, there were several press trucks here with built-in generators, battery operated remote cameras, and satellite dishes. Sadly, none of that helped the local residents' situation. Most also cleared out several hours before the storm hit, to broadcast pictures from inland areas.

> Did "most" amateur radio antennas miraculously
> remain standing while all those commercial towers
> fell?

Probably very few did. Regardless, that wasn't a concern for disaster response - none of those home based antennas were located where they were needed. Instead, what was needed were temporary antennas set up at communications centers, storm shelters, hospitals, and so on.

> For how many decades have communities in this region
> experienced other hurricanes? How much planning and
> organization have gone into emergency preparation?

Len, you don't seem to have a very realistic view of these situations. Yes, larger towns do fairly well when it comes to emergency preparation. Of course, there are always surprises, but they are usually handled with relative ease. Sadly, such is not the case for smaller towns, isolated communities, isolated residents, and unexpected situations. The drain on disaster resources can be staggering. In some parts of South Carolina following Hurricane Hugo, for example, whole towns and communities were cut off for days with no state or federal assistance. Neighboring communities jumped in to help where they could, placing a further burden on their own resources.

> We are waiting for the announcement that the HF antennas
> were all still up having miraculously survived the winds
> and rain while all the commercial towers fell, damaged
> beyond repair...

Again, you're not being very realistic, Len. Antennas at home (whether they stand or fall) are of little use to disaster personnel. Instead, ham operators volunteer to set up temporary radio facilities where needed, help

to put fallen antennas back up, and help to set up temporary antennas where restoring fallen antenna is not immediately possible.

> Did they get through the gridlock on highways or did
> they go cross-country to get there?

Actually, by the time the national guard arrived, a major roadway was cleared of traffic and patrolled by police to keep it clear. Cars attempting to enter that road were turned around at road stops manned by state police. In the future, that is the plan from the very start.

> So far, Dwight, all you've done is a lot of "pep
> rally rah-rah" about US amateur radio largely to
> an audience mostly made up of other radio amateurs.
> That's the wrong audience for addressing REAL
> emergency planning, organization, preparation,
> and training.

Len, you're placing the burden of emergency planning, organization, preparation, and training, on ham operators. That is neither our job or our emphasis. States, Cities, and regional governments have their own disaster planning, into which ham radio fits. Our involvement goes solely to the proper operation of our equipment and working properly with other civil defense personnel.

> Real Emergencies are survived by hard-nosed
> pragmatism based on past experiences of everyone.
> Real Emergencies are survived by ignoring the
> over-inflated egos of certain minority groups
> who've psyched themselves into an imaginary nirvana
> of self-importance before anything has happened.

I'm sorry, but I've never seen that following any disaster where hams were involved, Len. During Hugo, hams ignored their own situation to volunteer many hours of effort without pay (unlike most other disaster personnel) and without recognition in many cases.

Let me give you an example. One manager and a station employee of a local radio station decided to stay on the air during the storm. Several hours before the storm hit, that station lost all outside communications. A local ham, hearing their situation on the radio, drove through the storm, still hours before landfall, to join them at the station. That ham operator quickly established communications with ham operators outside the area. One of those hams drove to the disaster staging command center and fed communications about the storm (and other info from disaster personnel) back to the ham at the radio station, which was then broadcast to local residents.

As the storm approached, it was clear the station's tower was not going to stand. They responded by spreading a wire antenna throughout the building and operating with reduced power. With that, and several trips to a shed outside to refill the generator, they remained on the air throughout the entire storm. About 2am, the tower did eventually fall. The parking lot was

also flooded with about a foot of water, but the storm surge never made its way into the station.

I went to bed that night listening to this radio station. As the storm raged outside, with the danger still uncertain, their voices were very comforting. You might dismiss this ham operator with nonsense about "over-inflated egos" and "imaginary nirvana of self-importance," but I'll be darn glad to shake his hand any day of the week.

Len, you don't have to lecture me on California. I grew up in Sacramento, later lived in Ontario (near LA), and have family living in Southern California now (the LA area).

> A Richter 6.3 earthquake with a total cutoff of
> all electrical power is classified as a "small,
> isolated incident?!?"

Do remember "small" and "isolated" are relative terms. Compared to the damage done by some hurricanes along the East coast, or compared to some previous earthquakes in California, that earthquake was indeed a "small, isolated incident." Of course, no disaster is small when you're living through it.

> The telephone SWITCHING SYSTEM is simply overloaded
> by callers trying to dial out. That isn't "failure,"

It is a failure of communications, one that directly affects the ability of disaster personnel to reliably use that system (that's what we're talking about here, not telephone calls from your uncle in Florida).

> "Supplemental communications" were not needed in the
> 1994 Northridge Earthquake. While there was NO advance
> warning, off-duty utility workers could indeed get a
> "wake-up call" without any on-duty supervisors calling
> them by telephone. The utilities here already have
> contingency plans for which off-duty personnel to report
> without notification. Once reported in they are directed
> to sites of damage by supervisors who've been notified by
> mobile units.

You're looking at the small picture, Len. Disaster response is not limited to just your immediate area. It's wonderful your town is so well prepared. Can you say the same for smaller towns and communities throughout California?

> That presupposes that hams' antennas are never damaged
> or that enough are clever enough, handy enough, equipped
> enough to get "something on the air." Note: Radio
> amateurs were as frightened as anyone else in the area in
> the aftermath of the Northridge quake; had their own
> families to take care of FIRST.

Len, you've raised this issue several times. However, the condition of an antenna at home is not relevant, because hams don't sit at home when a disaster strikes. Instead, they volunteer at communications centers, shelters, hospitals, Red Cross stations, and so on. And, yes, like all others involved in disaster response, they take care of their families at home first if possible.

> Sorry, that just is NOT the case as demonstrated in Gulf
> War 1 and Gulf War 2 a dozen years later. (snip)

You're confused about how National Guard units work. In general, they rarely go to war as a unit. Instead, personnel within that unit, when called to active duty, are often assigned to existing active duty units. And it is those active duty units which have the equipment you describe, not the National Guard unit. National Guard facilities (bases, stations, etc) most often only maintain the equipment needed for peacetime operations and training. More advanced training is done by joining active duty units or visits to military training centers. There are exceptions to this, I'm sure. But we're talking about this subject in general, not specific units.

> As I said before, there was little, if any, sign of
> "supplemental communications" done by amateur radio
> groups here during the 1994 Northridge Earthquake. A
> couple H&W mentions occurred on the news THREE DAYS
> afterwards.

If that is so, why didn't you step forward to volunteer? Did you even make an effort to see if your services could be useful? Did you check to see if there were hams helping other services, such as the Red Cross?

> Problem is, the only "news service" reporting all that
> wonderfulness is ARRL. ALL the rest of the news media
> seems to be blind and deaf to all that terrific
> "supplemental communications." (snip)

And exactly how much coverage have you seen of any radio communications during a disaster by the media? This stuff is not exactly major news or exciting film footage. Nevertheless, coverage in the mainstream media does occur occasionally.

> Yes, amateur radio is a part of that, but it isn't primary
> and it doesn't rule nor has it worked out as the fabled
> stories (by amateurs) have told. (snip)

Nobody that I know of has ever claimed ham radio is "primary" to disaster planning. Ham radio is a means of supplemental communications, adding addition communications to existing communications systems where needed. As

such, it serves this purpose well.

> One great problem of fervent amateur organizational-bent
> hobbyists is the failure to see the myriad of OTHER
> communications services and methods and technology that
> ALREADY EXISTS. (snip)

I've never seen that. Everything I've read, everyone I've talked to, focuses on ham radio as supplemental communications for existing communications systems. The ham volunteers I've seen seem to understand this concept very well.

> (snip) Amateurs tend to become competitive, aggressively so
> at times, with all those other communications services and
> haven't come close to playing their everyday games nor have
> they the experience, organization, or training to be qualified
> to play in real emergencies.

Again, something I've never seen. Can you provide an example of a real life emergency where this (aggressively competitive behavior by hams) has actually occurred? Can you quote one civil defense person who has complained about a lack of experience, organization, or training, by ham operators? Hams are included in the disaster planning of towns and cities throughout the United States. Can you name one town or city that has excluded hams from that planning because of a lack of experience, organization, or training?

Dwight Stewart (W5NET)

You didn't bring up the words "snack bar" when Len talked of where you
were stationed? I think you did.

And leave Ed out of this. He's absent by his choice, not anything I
did.

> > > > QSL?

This proves what a farce the ARRL OO program
is! Obviously the ARRL appoints OOs without
doing any background check whatsoever.

Was he ever held responsible for the Stumpjumper
QRM tapes he authored and which were used for
malicious QRM on 3901?

Bob

>I want to go, out of curiosity. As I am pressured not to go to Ham events, I
>may not be able to.

You're being PRESSURED to NOT go to Dayton, Vipul?

Sounds to ME like you're in a cult, alright, but it's NOT Amateur Radio.

>As of Monday, I am no longer an EE. I missed my deadline, due at end of this
>month. Soon however, I will be in a more stable, higher paying (but less
>glamorous, non EE) field.

Then you were not an EE. Once you have earned your degree in the field,
it's yours unless removed for cause or surrendered cor cancellation.

I left nursing for a while after my daughter died. (This is what Lennie
keeps trying to make great hay about but fails miserably). Although NOT
"nursing" on a daily basis, I was STILL a nurse.

>So, Hamradio will b just hobee. All so, I have no plans 2 learn Morse code.

I see the 10 year old is writing for you again. Maybe you should try to
get a refund on your "Hooked On Phonics" package..?!?!

>Some R glad I M no longer EE, Specially some Hams without EE degree.

Thank God it wasn't an ENGLISH degree, Vippy.

And I doubt you ever had an "EE degree".

>Also, some
>of my relatives advised me that EE field not wurth it. Some-1 made a 5 year
>bet. I would like to make some kind of 4 yr bet.

I would have won with a 10 minute bet.

>I have another event I have to go to in May. It is a some kind of ceremony
>and
>some things must be followed. For example, the ceremony must be done facing
>the
>East direction.

Are you embarrased to be Muslim, Vipul? Can't say the words?

>Anyway, I would like 2 C what kind of Hams go 2 Dayton Hamfest. 2 C if Hams
>there R like other typical Hams I have met B-4

Keep this up and we'll open a special "sand box" section just for you,
Vipul. We might even get you a magnetic board with those letters you can move
around and make even sillier looking words. Maybe you and Mark Morgan, KB9RQZ
can share.

> > were a dime a dozen. Betcha he wishes he'd left the FB-7 alone!
>
> Lord, yes!

I shudder to think how much stuff was hacked up and/or tossed out in
those days. Of course that was when they were looked upon as old junk

and not worth the shelf space.

Of course if nobody had hacked them up or tossed them out, they'd be
all over the place, and very cheap.

> I love the old National stuff.

You ever been to the AWA museum near Rochester?

> I still run my SW-3 on a
> homebrew supply but an OT sold me an original FB-7 supply a few years
> back so I retired its homebrew power supply.

I had an NC-173 for a number of years, paired up with a Viking 2/122.
Nice AM setup, got it for almost nothing. They "needed work"... Sold
the pair for a bit more than I paid, back in '98 or '99.

It occurs to me that I actually own very few BA sets anymore, but lots
of BA-type parts. Lessee...BC-342-N, BC-453, some test gear. Rest is
homebrew or modern. If I want to do VFD it'll be with homebrew!

Comes from misunderstanding human nature. People will always "hop-up" their cars, radios, what ever; especially if the Government forbids it. It's as American as apple pie, speeding and mod'ing your ham rig to transmit out of band. The problem is two sided.

First, 1000s of CBrs find themselves crowded into 40 channels. Predictable, the more enterprising among them discovered the almost empty (by comparison) freq's between their band and our 10M band. And who here has never heard the siren call of DX?

Second, CBs are far too easily mod'd to work outside the band. Any 40-chan PLL CB is naturally a 64 (or 128 or ...) channel CB.

IMHO the answer is to reallocate the 11m band back to us, this over a period of say 5 years to be fair. The new bands better serve CBs original intentions without all of the inherent problems. It would also allow FCC to relax RF ampl rules imposed on us.

So, what's that have to do with Brucie's friends being "closely guarded?"

3796. CBplussers Net at Dayton

Newsgroup: rec.radio.amateur.policy

Would like to set up a time and a Net at Dayton, for the Hamfest. Do we have any one that would like to run the NET, preferable someone Local.
The Net could be a place where all CBplussers could check in, and us real Hams could listen and laugh at them. Maybe we could even use the Net for a way to setup meetings for us real Hams to meet the CBplussers.
I will also be selling"Down With CBplussers" T Shirts at Dayton, if you dont see me in the crowd, you can call me on 449.98 and I will give you my location at that time, so you can Purchase your Shirt. And if we get the NET setup, I will also give my location on it.
Hope to see you all at Dayton, and bring lots of Money for your own Shirts.

>First, 1000s of CBrs find themselves crowded into 40 channels.

If they were used correctly and within the scope of Part 95, they'd be far more utilitarian.

>Predictable, the more enterprising among them discovered the almost
>empty (by comparison) freq's between their band and our 10M band. And
>who here has never heard the siren call of DX?

Illegal is illegal. It's illegal for a reason, the reason being that there are other radio services in that part of the spectrum who are now unable to use those frequencies due to all the trash.

>Second, CBs are far too easily mod'd to work outside the band. Any
>40-chan PLL CB is naturally a 64 (or 128 or ...) channel CB.

So...we go back to crystal controlled radios with sealed "modules" that prevent opening and "reversing" the crystals to go out-of-band?

Just because something can be MADE illegal means it must?

>IMHO the answer is to reallocate the 11m band back to us, this over a
>period of say 5 years to be fair.

I say we put 10KW wideband noise generators on there for a year to force the abandonment of that part of the spectrum first.

>The new bands better serve CBs
>original intentions without all of the inherent problems. It would also
>allow FCC to relax RF ampl rules imposed on us.

The Japanese have a neat little 900Mhz "CB" service that we should emulate. Take out 2 Mhz of the present 33cm band and load it with low-power (10 w or less), 6.25Khz channels.

I'm just trying to figure out why they're so "closely guarded." I guess if I go to Dayton and see a group of people smiling for no reason, like they've had some sort of head injury, then I know I'll have found your friends.

>>"I'm of rubber,
>>you're of glue" comeback.
>
> No you got me on that one

Do I have to explain everything? Okay, pay attention - The full phrase is "I'm of rubber, you're of glue. It bounced off me, and sticks to you." If you go through the the past few mesages of this thread, maybe you'll be able to figure it out. If you can't, that's okay. I understand how people in your condition can get a little confused sometimes.

The control operator is the one who commanded the patch to answer (by entry of
the appropriate command code). He is the one on the radio side of the patch.

> > Seems to me that instructing all repeater users to give the message

That condition was GIVEN in the original question (a code to answer the phone).

That still doesn't mean that the incoming call isn't a telemarketer....

Obviously, you need to read the original question of the thread, not just jump
into the middle.

>>How much of a military man was Miccolis? Where did he fight?
>
> Where did YOU fight? When was your CIB (Combat Infantry Badge) awarded?
>Do you rate the basic award or award with wreath?

I just asked a question.

I was never qualified to wear the blue rifle, never claimed that.

I gave explicit details of where I was assigned in the US Army and the duties performed, including dates. No exaggeration. All of that is not only backed up by paperwork but is archived at the National Archives and Records Administration in St. Louis, MO. That includes an Honorable Discharge received in April, 1960.

Not only that, but a Long Island radio amateur (N2JTV) was assigned to the same Army unit at the same time I was, doing the same duties.

What do we get from the Gang of Four in here? This is what -

Steamy Stalker: "I was in seven hostile actions." No details, no dates, no descriptions, nothing. He was in "seven hostile actions." His first discharge was Medical...later "amended" to "honorable."

Herr Robust: "I was in Vietnam." No details, no dates, no descriptions, nothing else. Just he was "in Vietnam."

Reverend Jimmie: Null personal comment...he didn't serve in any US military branch at any time...but he feels compelled to be the military expert in equipment, doctrine, training and isn't hesitant to lecture others on what they should know or do. Perfect description of the ultimate REMF.

Katapult Kellie: Lots of Tuff Tawk about shooting bears from an aircraft carrier but that's it. Never served in the US military, any branch...but won't hesitate to shoot off his mouth without ammo. Says he was sponsored by USN intelligence...which is an insult

to USN and M.I. everywhere.

> Or are you yet again trying to present yourself as some kind of "expert"
>on yet another field of human endeavor for which you have no practical
>experience yourself?

I've had over 50 years IN radio, Steamy. I can design them, build them, test them, evaluate them, fix them if they become inoperative and, yes, operate them. Hands-on experience, tube burns and RF arc burns, with the best DX of a station ON the moon. In military service, commercial service, and some government service...all with enough evidence to stand up in any court, plus in-person testimony from witnesses.

I have NO experience in lying, cheating, gross exaggeration, or doing errors by deliberate omission as you do in here about your personal or amateur radio "experiences."

> I just think you're a putz.

You MUST think that. You don't have a lot of experience. You LIE and exaggerate beyond reasonable bounds.

You MUST do the Tuff Tawk thing because that is all you can present in any arguments on subjects. You don't know the subjects, so you do the personal attack thing with insults and name-calling. That seems to give you self-esteem, but only from bullying others, pushing them around. You appear to love bullying and pushing others around.

You aren't Yiddish, don't know that ethnic language or what the words mean. You use them without thinking, hoping they have the desired effect. They don't. They reflect back on you, not on anyone else.

This outright stalking of individuals makes your image worse, not better.

>California now (the LA area).

That's nice. I posted in public, not private.

I wasn't born in California and don't have any blood kin living here.
I just reside here and experienced a few emergencies first-hand.

There has been considerable geographic bigotry exhibited by
others in here. My "lecture" (as you quaintly put it) is to THEM,
not you.

>> A Richter 6.3 earthquake with a total cutoff of
>> all electrical power is classified as a "small,
>> isolated incident?!?"
>
> Do remember "small" and "isolated" are relative terms.

That's not all. I "must remember" that relative importance and
magnitude of anything depend on the ego and exaggeration of
outraged individuals living elsewhere who love to heap contempt
and scorn on others who are not their "neighbors."

>Compared to the
>damage done by some hurricanes along the East coast, or compared to some
>previous earthquakes in California, that earthquake was indeed a "small,
>isolated incident." Of course, no disaster is small when you're living
>through it.

Of course. "Small, isolated" because it didn't happen at the center
of the known universe called the east coast. Uh, huh.

"Small, isolated" because it didn't happen in 1909 in San Francisco
or the Loma Prieta general area or on the New Madrid Fault in MO.

That "small, isolated" Northridge Earthquake was so insignificant that
over 50 (perhaps 63) died directly because they were insignificant
"left coasters" who didn't deserve to live? "Small, isolated" outage of
ALL primary electrical power in a population area of at least 10
million? Of course. "Small, isolated" because the damage area
was confined to a square of roughly 50 by 50 miles? Of course, not
a Vast Area of Devastation as always happening on the east coast.

Anything out here along the Pacific ocean seems "small, isolated,"
doesn't it? Of course it is. We aren't a part of the United States,
are we? Of course not. We don't get hurricanes out here, a fact
making us the "lesser" compared to easties.

>> The telephone SWITCHING SYSTEM is simply overloaded
>> by callers trying to dial out. That isn't "failure,"
>
> It is a failure of communications, one that directly affects the ability
>of disaster personnel to reliably use that system (that's what we're talking
>about here, not telephone calls from your uncle in Florida).

Forgive me, your royal whatever. I've only seen emergency
personnel use a lot of different ways to communicate in "small,
isolated" events. Out here in that foreign territory that is "small
and isolated," we don't rely solely on the telephone system OR
amateur radio for prime communications.

> You're looking at the small picture, Len.

Yes, a foreign territory that is "small, isolated." Nothing at all
compared to Horry County, South Carolina.

>Disaster response is not limited to just your immediate area.

That's nice. I'm sure that Canada or Mexico can hop to aid
next time a hurricane strikes the Pacific coast. Just think,
ambulances all the way from Vancouver, BC, summoned by
ham radio net!

>It's wonderful your town is so well prepared.

It's a little "town," "small and isolated." 10-12 million or so folks.

>Can you say the same for smaller towns and communities throughout
>California?

Yes, but everything out here is "small and isolated," Dwight.
You've said so yourself. We can't know the Big Picture, can we?

People on the Pacific coast aren't prepared for hurricans that strike
every year. We would retreat to our "small, isolated" towns and
other places, not being prepared for anything MAJOR.

<some lecturing omitted since we are so "small, isolated">

> You're confused about how National Guard units work. In general, they
>rarely go to war as a unit.

Of course. Please explain what happened to the Joint Chiefs, the
President, and the news media who seem to differ on your
"explanation." Maybe they don't see the Big Picture due to living
in the "small, isolated" region known as the District of Columbia.
Air Guard units steal planes in the USA to fly off-shore? Of course.
All Guard units are under-prepared.

> If that is so, why didn't you step forward to volunteer?

I did but that's irrelevant to the Big Picture. After all, we were in
a "small, isolated" event not anywhere close to the Massive
Devastation of an East Coast Hurricane!

>Did you even make an effort to see if your services could be useful?

According to your "criterion," I couldn't possibly have done anything
"useful." I don't have an amateur radio license. I used my
commercial license.

>Did you check to see if
>there were hams helping other services, such as the Red Cross?

Saw no sign of them until 20 January 1994, three days after the
first quake...on one TV broadcast channel for a video byte.

Please remember that this was a "small, isolated" event that
wasn't of great importance (such as an east coast hurricane).

The President of the USA flew in for a first-hand inspection,
FEMA flew in a bunch of equipment. It was just a "small,
isolated" event of no real significance. You said so.

> And exactly how much coverage have you seen of any radio communications
>during a disaster by the media?

Stock shots of various comm centers makes up most of it out here
in "small, isolated" areas. We don't have much, only 13+ TV
broadcast channels, over 40 radio stations serving the Greater
Los Angeles area of a few million folks. We are "small, isolated."

>This stuff is not exactly major news or exciting film footage.

That's a problem with earthquakes...no advance warning for all
to get ready over a 2 to 3 day period, no dramatic pictures of
journalists braving the wild winds and driven rain. All we get
are pictures of damaged buildings and road structures, some
dogs sniffing at wreckage trying to find bodies, earth-moving
equipment moving wreckage out of the way. Dull stuff.

No real entertaining drama or emotional highs from a "small,
isolated" town. Sorry, Dwight.

>Nevertheless, coverage in the mainstream media does
>occur occasionally.

It does? Gosh, Dwight, living in this "small, isolated" town
we don't get out enough. Weekly copies of the Podunk
Hollow Gazette sometimes miss the stagecoach...

> I've never seen that. Everything I've read, everyone I've talked to,
>focuses on ham radio as supplemental communications for existing
>communications systems. The ham volunteers I've seen seem to understand this
>concept very well.

ARRL newletter give the other impression.

> Again, something I've never seen.

You've never seen an ARRL newsletter? It's on their website.

>Can you provide an example of a real
>life emergency where this (aggressively competitive behavior by hams) has
>actually occurred?

Yes.

>Can you quote one civil defense person who has complained
>about a lack of experience, organization, or training, by ham operators?

Yes.

>Hams are included in the disaster planning of towns and cities throughout
>the United States.

All of them?

>Can you name one town or city that has excluded hams from
>that planning because of a lack of experience, organization, or training?

No, but only because, living in a "small, isolated town," I can't
get out enough to visit every single urban community that has
some kind of emergency planning for communications.

I do hope your US Passport is up to date so that you can visit your
family here in this "small, isolated town." I'm sure many of us want
to hear all about the terrible hurricanes that ravage the east coast
almost yearly. We don't have anything like that in this "small,
isolated town." We are, after all, "small and isolated."

Sorry, Dwight, you get a failing grade in the ham emergency
mantra. You are supposed to say "commercial communications
always fails during an emergency!" Repeat that over and over
until you get like all the other tale-tellers.

>Instead, what was needed were temporary antennas set up at
>communications centers, storm shelters, hospitals, and so on.

Of course all radio amateurs are trained and experienced in
erecting antennas in storm and wind conditions, right?

>> For how many decades have communities in this region
>> experienced other hurricanes? How much planning and
>> organization have gone into emergency preparation?
>
> Len, you don't seem to have a very realistic view of these situations.

Tsk, tsk, tsk. What you really meant to say was that I don't have the syncophant's "view" in proper phraseology of boosting general amateur radio capability far beyond credibility.

The common mythology is for all NON-participants in real emergency work to equate their hobby with some kind of heroism and noble sacrifice that others do and therefore pin a hero medal on themselves. I'd call that "pride by association" which is another side of the coin that also says "guilt by association." Both have no basis in reality but is just bullshit braggadoccio.

Yes, I do NOT take all of the self-serving propaganda output of ARRL to be "truth without question."

>Yes, larger towns do fairly well when it comes to emergency preparation. Of
>course, there are always surprises, but they are usually handled with
>relative ease.

Here come the excuses...

"Larger towns" have about the same expenditures of tax monies as smaller towns all over the country.

Higher-population areas have a larger group of level-headed planners who know how to get the job done properly AND REALISTICALLY. They don't go into self-promoting bullshit about fantasies of noble, valorous service to the country by constant repetition of self-serving propaganda.

>Sadly, such is not the case for smaller towns, isolated
>communities, isolated residents, and unexpected situations. The drain on
>disaster resources can be staggering. In some parts of South Carolina

Okay, you've now made the Emotional Appeal. Everyone wipe their eyes and continue...

>> We are waiting for the announcement that the HF antennas
>> were all still up having miraculously survived the winds
>> and rain while all the commercial towers fell, damaged
>> beyond repair...
>
> Again, you're not being very realistic, Len.

I was being SARCASTIC, Dwight. How often have you heard hams say "the cell phones always FAIL!" in emergencies?

Do they "fail?" No. They get overloaded.

>Antennas at home (whether
>they stand or fall) are of little use to disaster personnel. Instead, ham

>operators volunteer to set up temporary radio facilities where needed, help
>to put fallen antennas back up, and help to set up temporary antennas where
>restoring fallen antenna is not immediately possible.

During high wind and storm conditions? I don't think so.

Evidently you know some amateur radio groups that have "antenna
kits" ready and waiting for such emergencies, "kits" of ready-to-put-
up antennas, available at quick notice. I've not heard of those.
Please describe who or which group has them and what those kits
contain, bands, etc.

>> Did they get through the gridlock on highways or did
>> they go cross-country to get there?
>
> Actually, by the time the national guard arrived, a major roadway was

>to enter that road were turned around at road stops manned by state police.
>In the future, that is the plan from the very start.

If there was a "plan from the start" by police, why did the gridlock
occur at the start?

Military humvees CAN go cross-country, Dwight. Most military
field vehicles can.

>> So far, Dwight, all you've done is a lot of "pep
>> rally rah-rah" about US amateur radio largely to
>> an audience mostly made up of other radio amateurs.
>> That's the wrong audience for addressing REAL
>> emergency planning, organization, preparation,
>> and training.
>
> Len, you're placing the burden of emergency planning, organization,
>preparation, and training, on ham operators.

No, no, no, Dwight. The "burden" of emergency planning, organization,
preparation, and training has ALREADY BEEN DONE BY OTHERS.

Radio amateurs have to learn that they must INTEGRATE with the
rest of the emergency groups that already exist. They have to work
WITH them, not as some separate, stand-alone organization. Few
amateurs want to do that according to the stories in here and
elsewhere...the olde-tymers in ham radio want to be the "bosses"
unilaterally.

>That is neither our job or our emphasis.

Whoa! That is contradictory to the ham mantra in here and other
places!

Haven't you heard the patriotic slogan, "ham radio is a SERVICE?"

Haven't you read all the tales in ARRL newsletters where hams
always fall out for duty, aid, help, over and above all other groups
involved in emergencies?

According to the output of the Gang of Four in here, copying the
Word from Newington, amateur radio is NOT just a hobby...it is
a vital service to the nation, indespensible in times of peace or
war, able to operate when all the commercial communications fail.

>States, Cities, and regional governments have their own disaster
>planning, into which ham radio fits. Our involvement goes solely to the
>proper operation of our equipment and working properly with other civil
>defense personnel.

Sounds like "standard boilerplate" phrasing, Dwight.

Try being original.

> I'm sorry, but I've never seen that following any disaster where hams were
>involved, Len. During Hugo, hams ignored their own situation to volunteer
>many hours of effort without pay (unlike most other disaster personnel) and
>without recognition in many cases.

Of course hams did exemplary work over and above anyone else.
I wouldn't expect any other phrasing in here.

You really ought to find another venue for such promotional out-
pouring. Try the national news media. They haven't glommed onto
such magnificent volunteer work in times of need from amateurs.
"60 Minutes" is always looking for such stories as one example.
"Dateline" on NBC is another.

> Let me give you an example. One manager and a station employee of a local

>"over-inflated egos" and "imaginary nirvana of self-importance," but I'll be
>darn glad to shake his hand any day of the week.

There you have the first draft, the outline of the story. Great stuff!

News media ought to lap it up. National news media, that is.

A dozen column-inches on page 5 of some Podunk Hollow weekly
gazette isn't going to get wide exposure.

Fantastic emotion-appeal content of the tale. Ought to make a lot
young people all fired up to "join the service" and Save Humanity
for Truth, Justice, and the Amateur Way!

High-fives all around for Hams everywhere...

Why isn't that what I said: The control op. answers the phone (by entry of the code)? However, that in no way prevents the fact that the incoming call IS from a telemarketer....

Did you understand what "inputting the reverse patch answer command" meant?

> Thus a telemarketer would never get past. Besides, most telemarketers use
> automated dialing equipment that screens for answering machines, busy signals
> and no answers. That equipment will think the repeater is an answering
> machine and dump the call.

Apparently not in this case. The telemarketer's equipment could be faulty and/or simply not recognize the repeater's synthesized outbound message to telco as an "answering machine."

> You could install one of those telemarketer zappers you see at radio
> shack....

Why? That costs money ($40 on the average)! :-)

The repeater controller is capable of generating the tones itself. I simply didn't know that telemarketers equipment looked for the tones and which sequence to use. [They weren't documented in my reference book which lists all the various tones for coins and other telco mischief.] However, that still will not kill a telemarketer who is calling in person (i.e. not using his demon dialer) - for he will immedately hear the voice after the tones, recognize that it's not a phone company message, and stay on anyway.

From other responses, the best sequence to use is apparently called the "no circuit" response: 985.2Hz for 380ms, 1428.5/380, and 1776.7/380. However, the "vacant circuit" response might also be valid: 985.2/380, 1370.6/274, and 1776.7/380.

Which helps how? I stated that there is NO DVR on the repeater.

I have been reading this thread with interest. I am just curious....why
would a ham want 11 meters back again ?

We were not using it in the first place. Which is one of the reasons it was
taken and turned into the CB cesspool. And now that the pool is ruined
WORLDWIDE...what possible good would it do a real ham?

Oh wait a minute.. I understand. Your all returning to your
'roots'...right?

Dan/W4NTI Never a CBer and Never will.

How does the control operator know when an incoming call is happening
unless the repeater transmitter does something? I thought that was
the part the FCC didn't like, that a non licensed caller can cause a ham
transmitter to key up (even though his voice doesn't get thru). As if
some kids with a scanner and who somehow know the phone number
decide to have a little fun by kerchunking the repeater via the phone?
Maybe I'm worrying about nothing.....

> 1776.7/380.

I took a look with Cool Edit Pro my wav file, and it looks like 985Hz/274, 1428/380, and about1810Hz duration 380msec. Not 1776Hz, so maybe my wav file is incorrect?...

I should try dialing a disconnected number with the PC's modem and have Cool Edit capture the sound. Then look at it like I did my wav file. Let me know if that would be useful or not.... Now to find a disconnected number without annoying people with valid numbers.... Maybe if I make an error like not dialing a 1 in front of an area code? But that might not get me the right sequence.

Have you ever noticed and wondered how these exCB types keep wanting to return to their beginings in radio? I don't understand why it is Ham radio seems to be the only 'hobby' that does this.

In the model building hobby...no one wants to go back to their first pathetic attempt at building a boat, a plane, a car...etc.

In fishing...no one that I know enjoys going back to a stick and a string and a bent pin for a hook.

ETC.

Why is it that in ham radio once they bust loose from the madness of CB they keep wanting to go back to it? Help me here if you can.

FCC's main problem was (is?) TVI from overamplified CBs used to "shoot
skip" - a problem not likely to occur where "skip" is impossible.

They'd leave for the same reason most of them avoid our 10M band;
because hams can and do DF them then turn them in.

Speeding is also illegal, but most drivers speed. I'm not saying it's
right, just that it's a fact of life that law enforcement hasn't been
able to curtail because it's so tempting. My solution is to remove the
temptation by moving CB to family radio or a new band as you suggest,
and leave 11m to us law abiding hams (c;

I didn't make the error. If any tripping or skinning was done, check
Len for blood or bruises.

> > I was never in the supply field.
>
> Please stay on topic.

You're forgetful. Len wrote of my being at a supply depot, moving
boxes.

> > > You

I wrote nothing about being stationed at a snack bar. The problem is
your notorious reading comprehension problem.

> And leave Ed out of this. He's absent by his choice, not anything I
> did.

His choice was made over last encounter with you.

> > > > > QSL?

At no point did I confuse the two. As a matter of fact, the very point
that I made was Len is here writing about amateur radio rather than
being a participant in amateur radio.

He may make miscalculations. He likely thought his anti-League, anti-amateur radio, anti-children, anti-morse testing views would be embraced by some significant percentage of readers. He likely didn't count on his condescent, pontification and lack of interpersonal skills alienating a large number of the particpants in this forum. His reception has likely been somewhat cooler than the one he envisioned.

The jeers and tomatoes must make Len feel like Susan Sarandon at VFW convention.

The fun factor doesn't go down if you're antenna or power limited--only
the score goes down.

> We gotta do a road trip one of these years...do Dayton and pick you

The only African tour where that wasn't true was Botswana, where the
city power was on all of the time and one could safely drink the water
from the tap. Sometimes the swimming pool in the front yard was more
tempting than the pileups.

> > Pretty nice lash up. I'd like to try a vintage Field Day using a QSL 60

> How many xtals ya got that would tolerate the QSL 60?

I actually have a handful of the round Bliley holders with the large
pins (and some adapters so they'll plug into the FT-243-style sockets).
W4JBP's (pre-war W9DGJ) 1941 homebrew rig which I now own is a QSL Sixty

on a larger chassis with the masonite front panel painted to look like
bakelite. Come to think of it, I could use that one and pair it up with
his SX-15 Sky Challenger. That might slow the rate down on FD.

I'd like that part. My dad used to know a jeweler who had a great line.
Pop showed him a ring and asked what it was worth. The answer was, "Am
I buying or am I selling?"

> > I love the old National stuff.
>
> You ever been to the AWA museum near Rochester?

No, I've only seen some of the AWA mags. The Jack Gray "History of
Wireless" museum is housed in the Cincinnati building which houses
WCET-TV (PBS) and WGUC (NPR) radio. I've visitied it a number of times.

> homebrew or modern. If I want to do VFD it'll be with homebrew!

I made a replica of a single 210 job from a '29 or '30 issue of QST
while in Botswana. The parts came from one of W8MN's early transmitters
in the town of Hinton, WV. Andy had stored the old stuff in the Hinton
Ice plant along the New River. It flooded in '37 and when his widow
gave the parts, I had to scrub the river silt from them. There were
loads of brown beehive insulators, big Fleuron insulators, King and
Cardwell variables, the original copper tubing coils for 40 and 80 and
some appropriate knobs. Instead of a breadboard, I used a really pretty
piece of African mahogany for a base. I'd be almost afraid to put the
thing on the air.

Wasn't it clear to you, Len? I was there in uniform during the war. I
was in the Air Force. I operated radio equipment. I drew combat pay.
I never visited a supply depot or moved boxes.

> Reverend Jimmie: Null personal comment...he didn't serve in

Tired of the whole code/no-code thing which will never seem to die, so I am trying to think of some other threads or come up with other threads from others I have heard discussing such matters.....

So, here goes the first one..... Should call sign districts change to reflect census data like other things when the census rolls around like congressional districts etc.?

Discuss.

> some kids with a scanner and who somehow know the phone number
> decide to have a little fun by kerchunking the repeater via the phone?
> Maybe I'm worrying about nothing.....

Because the system indicates that it has an incoming call. Yes, that does
cause the repeater to transmit a short message (voice or tone) - but remember
that repeaters are permitted to be under AUTOMATIC control. As long as that
act is identified (within 10 minutes) and cannot lock the transmitter on for
more than 3 minutes (97.213(b)), I don't see a problem within the regulations.
Since the landline side itself can't talk out until a code is entered, it meets
the protection requirement in 97.213(c). The problem I'm initally asked about
is when the landline side does start talking (because a control op. has entered
the code to answer the patch), the transmission quickly becomes a prohibited
one (due to content) because of the telemarketer - and what to do about that.

In the configuration I suggested above, it's hardly a kerchunk, because that
would require the caller to call back to make the next key-up, and by

operation, those would be practically a full minute apart. That's not in any sort several "quick-keys" in succession.

That sequence more closely resembles the one labelled "reorder." What that means is beyond me. The other basic choices were labelled "no circuit," "vacant circuit," and "operator intercept."

We can "turn them in" all we want, but until the FCC actually bothers to get
serious about it, I doubt much would happen. There are thousands of cases
that could be dealt with but aren't, I am sure of that.... Most likely the
budgetary concerns are even worse with Dubya in there since the economy has
backslid in the past 18-24 months.

And it is how you use it that matters..... I can modify my scanners to pick up cell phones. No big deal. It is how or if I use that information that is the key problem. And I sure am not gonna blab around if I did modify my scanners.

>
> First, 1000s of CBrs find themselves crowded into 40 channels.

Good... serves them right. Thank god we don't have that in ham radio..... lucky to find a dozen people out there except for contests.

>
> Second, CBs are far too easily mod'd to work outside the band. Any
> 40-chan PLL CB is naturally a 64 (or 128 or ...) channel CB.

And ham rigs are not too much different.... They can be "modded" as well.

The challenge there is to make the band undesirable to the existing CB'ers. I still think every one of us should start using the band, following existing laws for that band, and take it over by mere usage.

The control op or trustee has the ability to shut down the call as well as the repeater if deemed necessary if any other undesireable or problematic operation. He/she is ultimately responsible for the use and operation of the repeater.
For example, the closest repeater to me is the W8KEA repeater. Along with the trustee, there are 3 others that have the access codes to the repeater and entry authorization to the site where the repeater is located if there is a problem.

Europe has CB on 934 MHz, although they also have FM CB on 27 MHz, and some EU countries allow AM as well on some channels.

Then again the US already has GMRS and FRS on 462 MHz, and I understand that Canada and Australia have some form of CB on 462 as well, and yet they also still have 27 MHz.

The trouble is, 27 MHz will always be cheaper than UHF. This is why I don't think it will go away, and also why it attracts the worst sort of person (as well as some decent people too, don't forget). UHF isn't really in the budget if you flip burgers at McDonald's. The middle classes choose UHF already, and the blue collar masses select the cheaper alternative.

All the same, the Japanese UHF CB falls inside the US 902 MHz ham band, and making the same CB allocation in the US at 905-906 (I think that's where it is?) has some merit. It would allow unlicenced people a spot to talk to hams if the rules were made to allow it. Just don't expect it to take any share away from 27 MHz. Instead it would compete with 462.

> personnel use a lot of different ways to communicate in
> "small, isolated" events. Out here in that foreign territory
> that is "small and isolated," we don't rely solely on the
> telephone system OR amateur radio for prime communications.

No single system, the telephone or whatever, is solely relied on. Instead, communications involves all that is available. As systems fail, more and more traffic is carried by the remaining systems. For example, leading up to disaster, area disaster personnel spend hours on the phone making arrangements. As the phones fail (fail as a reliable means of communications), personnel fall back on other communications systems. As parts of those systems fail, a still larger burden is placed on the remaining systems. Soon, since the very last remaining systems are limited to only the most critical communications, more and more lower priority communications is cut off.

> That's nice. I'm sure that Canada or Mexico can hop to
> aid next time a hurricane strikes the Pacific coast.
> Just think, ambulances all the way from Vancouver, BC,
> summoned by ham radio net!

Don't be silly, Len. My point is that larger cities are often called on to help neighboring communities, placing an additional burden on their resources. For example, in the example I gave, Myrtle Beach ended up helping smaller towns and communities throughout the county. Since Myrtle Beach did not plan on that, the additional burden on resources was substantial.

> Of course. Please explain what happened to the Joint Chiefs,
> the President, and the news media who seem to differ on
> your "explanation." (snip) Air Guard units steal planes in
> the USA to fly off-shore? Of course. All Guard units are
> under-prepared.

Len, I gave you the facts based on almost 40 years living and working around the military. One of my wife's last jobs with the military was scheduling training for Army National Guard personnel joining active duty units in the SETAF command area (Southern Europe and Africa). She did the same thing while working at HQ USAREUR (HQ, United States Army Europe) for the Deputy Chief of Staff, Plans, Operations, and Security. Some Guard units are called to active duty as a unit. But, in general, most Guard personnel instead join existing active duty units when called to active duty. Likewise, Guard units generally do not maintain war fighting materials at the local Guard facility, nor do they maintain all the equipment they might use during war at those facilities. Instead, only what is needed for peacetime activities and training is maintained at most facilities.

> According to your "criterion," I couldn't possibly have done
> anything "useful." I don't have an amateur radio license. I
> used my commercial license.

The fact that you've used your commercial license to help others is wonderful. I hope you continue to do so. Heck, I have a few personal projects you could help me on. Of course, since I'm sure you don't want to burden yourself with my personal projects, the organization I'm a member of (USCGA) certainly could use your help instead. If you're interested, I can have someone contact you within a few days.

Of course, on a personal note, I do wonder why you spend so much time in the Amateur Radio newsgroups if you have no real interest in ham radio. Passing a ham license exam should be child's play for you, which makes me wonder why you haven't done so.

"Len Over 21" wrote:
>
> Complain to the news media. Don't start whining
> about "all commercial facilities FAIL during an
> emergency." (snip)

I would never make such a claim, Len. What I said is that commercial facilities are unreliable during and in the hours immediately after a disaster because employees evacuate, towers fall, stations go off the air because of power failures, and so on.

> Sorry, Dwight, you get a failing grade in the ham emergency
> mantra. You are supposed to say "commercial communications
> always fails during an emergency!" (snip)

A substantial percentage of those systems do fail - fail as a reliable means of communications. That's what we're talking about here. The issue is not whether some remain on the air after a disaster. Instead, the issue is whether those systems can be relied on when it comes to disaster planning.

> Of course all radio amateurs are trained and experienced
> in erecting antennas in storm and wind conditions, right?

Far more so than most dispatchers at a 911 call center, or most personnel at disaster staging areas, or most personnel at disaster command centers, or most employees at a hospital, or most volunteers at shelters, or most volunteers at Red Cross aid stations, and so on.

> I was being SARCASTIC, Dwight. How often have you heard
> hams say "the cell phones always FAIL!" in emergencies?
>
> Do they "fail?" No. They get overloaded.

They fail as a reliable means of communications. Note the key words in that - "reliable means of communications." When we're talking about disaster planning and disaster communications, reliability is the critical issue.

> Evidently you know some amateur radio groups that have
> "antenna kits" ready and waiting for such emergencies,
> "kits" of ready-to-put-up antennas, available at quick
> notice. I've not heard of those. Please describe who
> or which group has them and what those kits contain,
> bands, etc.

Every disaster oriented group, from ARES to the local civil defense office here in this small town, has their own guidelines and recommendations for how members should prepare. For example, chapter seven of the ARES Emergency

Coordinator's Manual contains guidance on both communications (radio equipment, etc) and personal (hygiene, etc) preparedness. Member's manuals contain similar material, but I don't have a copy of those anymore to give chapter and verse quotes. ARES Coordinators then work with local disaster personnel to establish frequencies, bands, equipment, and other such preparedness planning.

> Military humvees CAN go cross-country, Dwight. Most
> military field vehicles can.

As I said, by the time the National Guard arrived, a major roadway was cleared of traffic.

> Radio amateurs have to learn that they must INTEGRATE
> with the rest of the emergency groups that already exist.

> alone organization. Few amateurs want to do that
> according to the stories in here and elsewhere...the
> olde-tymers in ham radio want to be the "bosses"
> unilaterally.

Len, perhaps if you read up on the actual programs in place, you might realize that is not the case. For example, the ARES Emergency Coordinator's Manual exhaustively covers interaction with other agencies. This includes establishing "a viable working relationship with all federal, state, county, city governments and private agencies" and working to set up "mutual respect and understanding and a coordination mechanism for the good of the public." The ARES member's manuals covers individual interaction with the individuals in those agencies.

Ham radio is both a hobby and a service. One does not have to exclude the other.

> Of course hams did exemplary work over and above anyone else.
> I wouldn't expect any other phrasing in here.

Stop trying to endlessly put words into my mouth, Len. I've never talked about anything "over and beyond anyone else."

>In 4 yrs, event X will happen or I will do task Y.

Uh huh.

>I dont want to start club anymore. Pointless since I am no longer an EE.
>Also,
>I don't want to learn Morse code.

Let's see....You don't want to be an EE anymore...You hate Amateur
Radio...You don't want to learn Morse Code...You think that any gathering of
Amateurs is meant to keep you from meeting "preety fems" or to conscript you
into a cult...You insist you want to commune with others who are also
interested in "experimenting" or "homebrewing", but you don't want to do
anything to create the circumstances in which you can accomplish that.

All I see in here is what you "can't do", "won't do", or "don't do". Not a single word of "can do", "will do" or "want to do". You are in need of some really potent mood elevators, Vippy. Try to not be such a loser.

>>>I have another event I have to go to in May. It is a some kind of ceremony
>>>and
>>>some things must be followed. For example, the ceremony must be done facing
>>>the
>>>East direction.
>>
>> Are you embarrased to be Muslim, Vipul? Can't say the words?
>
>I didn't say I believe. I just said I will <have to> attend.

Ohhhh! I see! Just like you "support" Amateur Radio, you SAY you support it, but then when it comes down to putting some action behind it, you're just a lot of hot air.

There's nothing wrong with being Muslim, Vippy. Unfortunately right now Islam is smeared with the murderous acts of Osama bin Laden, Saddam Hussein, and such historical characters as Ayatollah Kohmeini. Christianity has it's share of idiots, thieves and charlatans too. We call them "TV Evangelists" Jim and Tammy Bakker, Jimmy Swaggert, etc. Some are even meglomaniac murderers, ie: Jim Jones.

Do you not believe in the Five Pillars? If not, don't go and pretend. It's a lie if you do.

No, you only insinuate that you are somehow qualified to make judgements
on what one person's military career is "worthy" and anothers was wasted or
insignificant.

>I gave explicit details of where I was assigned in the US Army and...(SNIP)

Yada Yada Yada.

Here's where Lennie goes into one of his "I Did Better Than You" rants
over military service:

>Steamy Stalker: "I was in seven hostile actions." No details,
> no dates, no descriptions, nothing. He was in "seven hostile
> actions." His first discharge was Medical...later "amended"
> to "honorable."

Sorry, Lennie. It was Honorable from the very beginning. And you ahve no
need to know the actions I was involved in. Why should I tell you? I do wish
you'd get your act right.

> Herr Robust: "I was in Vietnam." No details, no dates, no
> descriptions, nothing else. Just he was "in Vietnam."

Why does he need to validate this to you? He's given more than enough
information to validate his claims. And not one attempt to embellish his
duties at the expense of American KIA's.

>Reverend Jimmie: Null personal comment...he didn't serve in
> any US military branch at any time...but he feels compelled to
> be the military expert in equipment, doctrine, training and isn't
> hesitant to lecture others on what they should know or do.
> Perfect description of the ultimate REMF.

I love it when you go "Pot/Kettle/Black" on us, Lennie. You always insist
it's your Constitutional right to be arrogant and assinine in this forum even

though you are not licensed in nor a participant in any way, shape of form of Amateur Radio.

Yet when someone effectively challenges YOUR knowldege on matters military, YOU feel compelled to try and dismiss their comments because they aren't aor weren't "in" the military.

Sheeeesh.

>Katapult Kellie: Lots of Tuff Tawk about shooting bears from an
> aircraft carrier but that's it. Never served in the US military, any

> Says he was sponsored by USN intelligence...which is an insult
> to USN and M.I. everywhere.

No more than your frequent catapult shots of verbal dung are embarrasing to REAL EE's and "radio professionals", Your Scumminess. And I've never seen Kelly say anything he couldn't back up or could be verified by some intrepid investigating.

That you're too stupid or ignorant to find out on your own is tribute to the kind of loser you are.

>> Or are you yet again trying to present yourself as some kind of
>"expert"
>>on yet another field of human endeavor for which you have no practical
>>experience yourself?
>
> I've had over 50 years IN radio, Steamy.

Not in AMATEUR RADIO you haven't, Smoky. (As in blowing smoke...AGAIN...)

>I can design them, build them,
> test them, evaluate them, fix them if they become inoperative and, yes,
> operate them.

Only as long as they fall into Part 15, 18 or 95, or you are "operating" as an employee of a radio station license holder, Lennie.

Ohh...By the way...I can do all of those too. Didn't require 15 years of night school to do, either.

AND...I have an FCC Station License under which I CAN operate them!

>Hands-on experience, tube burns and RF arc burns,
> with the best DX of a station ON the moon.

Gee, Lennie, I've worked DX >>VIA<< the moon. With my own station, without supervision...Imagine that...

>In military service,
> commercial service, and some government service...all with enough
> evidence to stand up in any court, plus in-person testimony from
> witnesses.

Witnesses? Stevie Wonder, Ray Charles and Jeff Healy?

>I have NO experience in lying, cheating, gross exaggeration, or doing
> errors by deliberate omission as you do in here about your personal
> or amateur radio "experiences."

Yes you do, Lennie. YOU may not be willing to accept it, but it's been
PROVED that you have by more than one person...Actually, by more than a dozen.
Pathological liars generally DO beleive what they say, even though it's
obviously incorrect.

>> I just think you're a putz.
>
> You MUST think that. You don't have a lot of experience. You LIE
> and exaggerate beyond reasonable bounds.

You ARE a putz, Lennie.

>You MUST do the Tuff Tawk thing because that is all you can present
> in any arguments on subjects. You don't know the subjects, so you
> do the personal attack thing with insults and name-calling. That seems
> to give you self-esteem, but only from bullying others, pushing them
> around. You appear to love bullying and pushing others around.

I am not "bullying" or "pushing others around", Lennie. I read what you
say, compare it against either (a) what I know to be true or (b) against what
you have said in other posts, and then rub your nose in it.

You ARE a liar. This has been archived in USENET for years.

You DO denigrate and humiliate others for your own entertainment when they
show the least amount of emerity in adressing yuor rants.

You ARE profane and irresponsible. Twenty-plus referals to Jim Miccolis
as a "bullshit artist" in one post is a prime example.

>You aren't Yiddish, don't know that ethnic language or what the words
> mean. You use them without thinking, hoping they have the desired
> effect. They don't. They reflect back on you, not on anyone else.

I am NOT Yiddish...Yes, I DO know what certain ethnic phrases mean, and I
DO use the word PUTZ when refering to you.

You have yet to conduct yourself in any manner that would make me re-think
that as inappropriate or inaccurate.

>This outright stalking of individuals makes your image worse, not
> better.

This is a public forum, Lennie. Nothing I have said here is covert,
clandestine or intended to deceive.

You, however, continue to post here even though you have openly admitted
you have no licensure or vested interest in being a licensed Amateur.

Who do you think a judge would say is stalking who? Where will all the headers lead if I pull up the posts by "MegHz" and several other anonymous posters in here, Lennie?

Putz.

Hi Ray and I hope you brought your Asbestos Undies if you hang with us for long!

A "CBPlusser" is a derogatory term used by one of the more profane, immature and basically bigoted regulars to this newsgripe named Bruce Beynon, WA8ULX.

Bruce, originally from Canton Ohio and as of late from some podunk parish in Louisiana, is one of those idiots who, by reason of profanity and poor gene pool reserves, finds it necessary to make inflammatory comments about pre-Restructuring Technician class licensees.

Engage him at your own discretion. He is, to his credit, an equal opportunity bigot. He hates everyone and everything.

Agreed! But considering what my limited setups have been able to do in
domestic 'tests, I'm pretty happy to focus on them. Couple years back
I was able to do second-place A-power in EPA, which is not a small or
noncompetitive section. Last two years the K2 has done a decent job.

Indeed!

The only attraction of xtal control for me is the simplicity of the
rigs, and with the ease of VFO/ECO construction it's not worth it for
me.

Example of a no-budget VFO:

Look around for a trashed ARC-5 transmitter or two. They are still
around cheap if you get aluminum ones that are beyond restoration.
Strip the chassis down, clean and save all usable components including
the chassis. Drill out the six big and four small rivets that hold the
front panle to the chassis, cut down the chassis to just behind the
1635 sockets and reassemble with 6-32 screws, nuts and washers. On
this "cut and channeled" chassis use the PA tuning cap with dial, the
oscillator padder and coil, and shield. Power plug on rear, ceramic
tube socket for a new 'SK7 or equivalent oscillator in the classic
Hartley circuit. Pad the grid circuit down to half frequency and use a
plug-in plate tuned circuit. Do it right and it will drive almost any
BA rig.

Me neither, and I used to live up there. Did not know about the museum
at the time.

They got W3WRE's key collection, which is a good thing because that
way it was not broken up. I am glad I got to know Lou back in the
'70s.

> The Jack Gray "History of
> Wireless" museum is housed in the Cincinnati building which houses

Absolutely. Particularly in the case of the CQ WW the strategizing,
all the minutia ya hafta know going in (10**3 memorzed prefixes), the
huge number of mults available, the strain it puts on the "ears", both
the op's and the rcvr's and a bunch of other factors put the dx tests
on a plane well above the domestic contests. And ya have to be able to
accept the fact that yer gonna get reapeatedly pounded into the ground
like a bug even by yer buddies and still enjoy the brawl. I'm
targeting the CQ WW CW this year with a really lame station but I'll
be in there mixing it up and having a blast. Maybe I'll manage 300 q's
via the search & pounce mode. Immediately after the scores become
known I fully expect one of the neighborhood Big Guns to tell me to
turn my rcvr on next year.

Sick pups. Somebody would have to put a gun to my head before I'd
actually go on the air with a Drake 2B and a Johnson Ranger . . .

Is Google FUBARED or what? A lotta posts made within the last few days
have disappeared - and not just in RRAP.

As if he was born holding an amateur extra license. Newbies will
make errors, we were all there. Most will learn, but it takes a
while for them to get it together.

And some never get it, as witness 14313 and that was before
restructuring.... And they had to pass 13 WPM to get privs
for that band....

Speaking as a nickle Extra, I'd welcome the opportunity to retest. I
don't yet have a working station that can key up, but I've been
practicing the code the best I can, and the challenge would help me
keep going. In fact, I'd welcome a requirement that all amateurs pass
their tests again before an application to renew a license would be
approved. This will take the old farts who have forgotten everything
but how to key up a transmitter and encourage them to learn again, as
well as keep those who wish to polish their skills motivated.

Good idea. You run the risk of turning this into a useful newsgroup. ;^)

Yes, but.... I only think it should be done over the long term, like
every 30 years or so.

I wonder if there is hams per capita by division data out there?

Better yet, mandatory re-testing every year. You have to increase your
CW speed by 5WPM every year. After ten years licensing, the extra would
have to be working at 65 wpm. After 17 years, the ham would be at 100 wpm!

Call sign districts indicate geographic regions, not demographic.
When they start shuffling state borders according to census results,
then you can start talking about redisctricting callsign regions.

That's alright, Robert. His last FCC address was Canton, OH, which means
he's either lying about the ABQ residence now, or he lied to the FCC as to his
real address for some period of time.

Either way, he's lying.

And we are surprised....why?

no. anyone can request any number in their call now with the vanity
program, you don't have to change calls to reflect a new address when you
move, so why bother changing the boundaries of things that don't mean much
any more any way.

This is only one of the things that bugs me about the vanity call sign
concept. Personally, I like having a 2 in my call sign even though
I'm in 6 land. When I operate on HF, I plan on using "/6" even
thought I don't have to do it, because it seems to me to be good
operating practice.

Maybe not. I let all of my tickets expire sometime around 1982. I decided to get back my tickets (well, the GROL is all that is left after the demise of the 1st phone; the telegraph ticket isn't worth the time to go and test out for) in 1993. Hadn't copied CW since 1969 (except for 'fantastic voyage' in which real CW is used and I found I could copy that). I called to find out when the next testing session is and it turned out to be four hours later the same day. So, with no preparation, I merely spent 3 hours testing out. Be very careful what you wish for; you just might get it. :)

Perhaps we should follow the telephone and increase the number of call sign districts. With 100 districts, more folks can have a 1X2 or 2X1 call. Gee, with a 6 digit number, we can have a 1 letter call sign! CQ dx cq dx cq dx de W401236 W401236 W401236. Think of the possibilities! Of course, with A, N, K, or W at the start, we could almost do with only 4 numbers in the call. Maybe force the codeless techs to make do with a 1X1 call sign while the 'important' folks get just a single letter. Fact is that most folks can get just about any single digit in their call now so it would appear that this thread is moot. Nice try, however, to come up with something different :)

From K4YZ:

>>No, just some people that see Hams as weird. From my observations, I cannot
>>dispute that.
>
> Considering your "knowledge base" of Amateur Radio, I don't doubt this.
>You've not demonstrated a very horough understanding of what it's about.

No amateur radio knowledge base is needed to know that Hams are weird. One can see that at their first visit to a Hamfest. I noticed that Hams are mostly male at my first Hamfest, which a coworker, who is a Ham, invited me.

Also, there are certain social norms. Hams, as a group, tend not to follow these norms. Hams speak in codewords, tend to be larger sized, obsessed with antennas, contesting, CW, DX.

I can often recognize Hams. In antenna class, I knew antenna lab person was a Ham well before he came out and said it. He used certain phrases. He bragged about certain antennas he built. He called some of his lab notes "Hints and Kinks", etc.

With the exception of antennas and propagation conditions, Hams are usually not technical. However, in this technical area, Hams are often very skilled.

>Have you returned your diploma to the college from which you allegedly
>graduated?
>
> If not, you will still be an "EE". you may not WORK as one, but it's
>still there.
>

I have not turned in my degree. I no longer work as an EE.

Amateur radio is a specialized area within EE. Having EE degree does not imply radio or rf knowledge unless one studied that area. I happened to get good grades in difficult rf specific courses. However, no longer in the EE field, I can no longer say my EE knowledge helped me in amateur radio.

Even when I was EE, one of my rules is: make sure certain vendors recognizes YOU, not just the company you work for. That vendor relationship should carry onto another company should you work somewhere else. This should be especially true of those vendors in your desired field. This benefits you professionally.

One Ham in local club happens to be agent in same field I switched to. I would be his buyer. Good to have some contact with someone in my new field. I recognize this person as the Ham in my local club, not the company he works for.

>You don't want to be an EE anymore.

I truly enjoy the EE field. I know that's not the most profitable field for me.

>You hate Amateur
>Radio..

No, I don't. I enjoy amateur radio. One summer, I tuned some radios and saw waveforms. Also communicated with others over the radio. This before I even heard of "Ham" radio.

Ham radio seem to be a very different experience from what I experienced before. Sadly, I don't see much of the stuff that got me initially interested in amateur radio, in the Ham radio clubs.

>You don't want to learn Morse Code.

That's right. I don't

>You think that any gathering of
>Amateurs is meant to keep you from meeting "preety fems" or to conscript you
>into a cult.

Ham demographics is 95% male. Hams don't keep you there. Ham radio cannot entirely be a cult. It does have mostly technical aspect. Certain aspects of Ham radio, often called traditions, really are cult-like. Hams don't "conscript". One can join if one wants to.

>You insist you want to commune with others who are also
>interested in "experimenting" or "homebrewing", but you don't want to do
>anything to create the circumstances in which you can accomplish that.

I did put in some time trying. Finding a location was no problem. I just used the same location as the club. The expense was not too great. Town gives very low rate for non-profit groups.

They do not just give it to you. One needs to set up a business license for a non-profit organization. Also, you need to detail an organizational chart. You need to come up with a purpose statement.

Mostly, it takes some time to get new members. I do not have the resources to do this. Two people showed up. Actually, I was surprised that anyone showed up.

One of them was a real Ham. He insisted that the way to get new members is to recruit current Hams. I knew, from my experience, most Hams would not be interested. Otherwise, I would not need to form this type of club. I could just talk to Hams at my local club.

Anyway, the "club" could not maintain itself. Even before it started, I could not continue it. Now, since I am not in the EE field, its pointless to try again.

>All I see in here is what you "can't do", "won't do", or "don't do". Not
>a single word of "can do", "will do" or "want to do".

Lets make a (4 year) bet and you will see what I can do.

>the ceremony must be done facing the East direction.
>>> Are you embarrased to be Muslim, Vipul? Can't say the words?

That's Hindu tradition.

One of my relatives is in the "IND" gang. He refuses to give details about what they do when we ask. We don't know what that is. It may be some kind of...

>>I didn't say I believe. I just said I will <have to> attend.
>
> Ohhhh! I see! Just like you "support" Amateur Radio, you SAY you
>support
>it, but then when it comes down to putting some action behind it, you're just
>a
>lot of hot air.

No, this is an event I have to attend. No support is implied.

Also, I may have exaggerated when I said I support amateur radio. I lent someone a copy of my ARRL handbook. I mentioned a Hamfest to someone else. I mentioned I was a Ham in social situation.

Not in the EE field, I would still give my honest opinion if someone asked me. If an EE asked me about Ham radio, I would not recommend it, even if they are interested in the rf field. However, if they are interested in antennas, I would recommend Ham radio.

No longer in the EE field, I will no longer want to support amateur radio. I will defend it, but not go as far as to support it.

Just a follow up to this thread.... My opinion is that it doesn't matter either way to me. That never was the intent of the posting. Just heard this discussed somewhere and thought that it might be a good one for the newsgroup.
Not that we would every have enough hams anyways where a district could theoretically run out of available callsigns anyways. Not enough promotion for that to happen.....

A callsign is just a callsign... that's it. It is the operating privileges allowed by the license that makes the difference.

This is only one of the things that bugs me about the vanity call sign concept. Personally, I like having a 2 in my call sign even though I'm in 6 land. When I operate on HF, I plan on using "/6" even thought I don't have to do it, because it seems to me to be good operating practice.

Jack.

I don't think it is gonna be an issue at least for a while as there are not
enough hams to fill up the existing callsigns we have already. Unless there
is some major promotion, the growth rate we currently have won't make that
an issue.

> I wonder if there is hams per capita by division data out there?

Good question..... wonder if the FCC would release data of that sort??

The "Class" name is wrong. This would make the dummies that just learned code and not the technical material, "only" coders, higher "class".

>The way I look at it is, if a person wants the privileges they will earn
>them.

Not when an unfair, irrelevant barrier such as Morse code is put there. Its unneeded bacause one can operate on HF without Morse code.

How about a special test for the microwave bands, above say 2.4 GHz? Once one passes this test, they can operate above this freq.

>

Now that would make it an effective communications mode! 100wpm! Whew!

Since we obviously can't get away from the morse issue, I would actually support retesting after every 10 year chunk of time. If you haven't been active or taken the time to learn more than the minimum basic amount of learning to pass the tests. This re-testing would also include morse testing as well. If it is as important as some hold it here, then it is something that should have at least been maintained or improved upon within ten years, above original testing results. Definitely would weed out some of the ones that get the license and then do not do anything with it. Hell, drivers licenses are retested on a regular basis.

>smaller towns and communities throughout the county. Since Myrtle Beach did
>not plan on that, the additional burden on resources was substantial.

Okay, so you've used the same area as another example.

Is that one of the "small, isolated incidents" you labeled the
Northridge Earthquake of 1994? I can't imagine that beach area
having a population of 10 million...

> Len, I gave you the facts based on almost 40 years living and working
>around the military.

Okay, I can only claim 37 years (1952-1989). :-)

>One of my wife's last jobs with the military was
>scheduling training for Army National Guard personnel joining active duty
>units in the SETAF command area (Southern Europe and Africa). She did the
>same thing while working at HQ USAREUR (HQ, United States Army Europe) for
>the Deputy Chief of Staff, Plans, Operations, and Security.

Gosh, Dwight, you brought in your WIFE to this discussion.
I can't say anything against WIVES or direct kin without that
becoming instant condemnation! :-)

Ahem, there are no US National Guard units having home bases
in Europe or Africa. They only deploy there. :-)

>Some Guard units
>are called to active duty as a unit. But, in general, most Guard personnel
>instead join existing active duty units when called to active duty.
>Likewise, Guard units generally do not maintain war fighting materials at
>the local Guard facility, nor do they maintain all the equipment they might
>use during war at those facilities. Instead, only what is needed for
>peacetime activities and training is maintained at most facilities.

You are wandering away from the thread. It isn't about the NG.

I can give a lot of examples where entire Guard units were activated
and deployed with nearly their entire TO&E intact and performed
well. But that is thread wandering and doesn't involve amateur radio
even indirectly.

> The fact that you've used your commercial license to help others is
>wonderful. I hope you continue to do so.

Why? I don't need any license to help others.

>Heck, I have a few personal projects you could help me on.

Outline the task and I will quote on the cost.

So far you've not been as nice and polite as you could have been
so I have to revert to the professional.

>Of course, since I'm sure you don't want to
>burden yourself with my personal projects, the organization I'm a member of
>(USCGA) certainly could use your help instead.

Just what kind of role-playing are you doing in here? The last thing
anyone needs is noblesse oblige laid on by amateurs trying to
parade around like professionals...but much more arrogant about it.

>If you're interested, I can
>have someone contact you within a few days.

...and shortly after that, either a process server or some law
officer can "contact you," too.

Try not to threaten. You can't have my boat impounded...don't
have one.

> Of course, on a personal note, I do wonder why you spend so much time in
>the Amateur Radio newsgroups if you have no real interest in ham radio.

I've said it many times: My interest in here is solely the elimination
of the morse code test for any radio license.

Unfortunately, a lot of radio amateurs have their mighty manhood
all tied up with an amateur radio license and act like children when
professionals do not gush and admire their amateur
accomplishments. That makes up the majority of messaging in
here.

>Passing a ham license exam should be child's play for you, which makes me
>wonder why you haven't done so.

I'm not a child, Dwight.

I don't need any "test" that six-year-olds can pass in order to prove
my "manhood." Several other amateurs in here have their "manhood"
all wrapped up in that amateur license.

Why are you auditioning to become a member of the Gang of Four?

It isn't my concern what happens in South Carolia disaster and
emergency services. I'm sure they have someone there who can
restore reliability, allow workers to stay on the job safely, reinforce
tower structures, and provide power generation facilities.

The picture you paint of such facilities in South Carolina is not a
good one. If that is part of your local government, you should be
taking action in your community instead of arguing in an amateur
newsgroup.

No, that is NOT what you are "talking about."

You are directly charging South Carolina disaster and emergency
services with failure to secure safety for its citizens. That's not nice.

>> Of course all radio amateurs are trained and experienced
>> in erecting antennas in storm and wind conditions, right?
>
> Far more so than most dispatchers at a 911 call center, or most personnel
>at disaster staging areas, or most personnel at disaster command centers, or
>most employees at a hospital, or most volunteers at shelters, or most
>volunteers at Red Cross aid stations, and so on.

I'm not convinced of that. You are implying that none of these
people know anything about antenna erection in storm and wind
conditions.

You have NOT answered my question about radio amateurs.

The only "answer" given is a lot of waffling, trying to misdirect
into something else.

>> I was being SARCASTIC, Dwight. How often have you heard
>> hams say "the cell phones always FAIL!" in emergencies?
>>
>> Do they "fail?" No. They get overloaded.
>
> They fail as a reliable means of communications. Note the key words in
>that - "reliable means of communications." When we're talking about disaster
>planning and disaster communications, reliability is the critical issue.

...and, again by implication, you've made the charge that the
organizations involved can't do the job.

Also, by omission, you've implied that amateurs ARE reliable.

To carry that absurd condition further, it would be logical to have
the professionals doing all that "unreliable" step down, quit, and
give the job over to an all-amateur organization that has all the
ARES manuals containing all the answers.

You are waltzing all around the subject, not making any sense
with all the suppositions, assumptions, and non-answers.

>> Military humvees CAN go cross-country, Dwight. Most
>> military field vehicles can.
>
> As I said, by the time the National Guard arrived, a major roadway was
>cleared of traffic.

Then what was all that emotional hoopla about all major roads
being overcrowded and no one getting through?

Such gridlock would have stopped radio amateurs as much as
anyone.

With a clear roadway all can get through. There's no real problem
there, only the embellishment of a tale with something that didn't
apply to the argument.

> Len, perhaps if you read up on the actual programs in place, you might
>realize that is not the case. For example, the ARES Emergency Coordinator's
>Manual exhaustively covers interaction with other agencies.

Yes, propaganda noted. Now, to be "reliable" in the crunch, all that
planning by that book should have been proven. How and where was
that proven...other than a lot of loud emotional patriotic statements
about the bestness of amateur radio?

The California Auxilliary Communications System HAS been proven
in several crunches in this state. ACS doesn't feature ham radio as
the star of all radio services for "reliability." The Greater Los Angeles
disaster and emergency communications planning, organization, and
training has already been tested and passed several times...it is a bit
older than California ACS but integrates with them just the same.

> Ham radio is both a hobby and a service. One does not have to exclude the
>other.

The term "service" is a regulatory one, used throughout Title 47 CFR
to denote the type and kind of radio activity being regulated.

Good citizenship is a true service and doesn't require any ham license.

> Stop trying to endlessly put words into my mouth, Len. I've never talked
>about anything "over and beyond anyone else."

Then stop with all the gratuitous implications and not-nice comments
yourself.

If you see a real problem with disaster and emergency organizations
in South Carolina, take your case to the administration of South
Carolina. This isn't the place for it.

Ask around if anyone has any unused ARES manuals. Use those to
beat on the South Carolina administrators to show them the good,
true way through amateurs alone saving the day. No problem. Until
the next bad hurricane when it all seems to start over.

I apologize if what I wrote sounded like a threat, Len. There was no threat intended. You said you've used your commercial license to help others. Since you have an interest in helping others, and the USCGA has a need for people with such skills, I took the opportunity to invite you to join. That invitation still stands.

> I've said it many times: My interest in here is solely
> the elimination of the Morse Code test for any radio
> license.

But if you're not involved in Amateur Radio, why should it even concern you that Morse Code exists in Amateur Radio? Notice I'm not arguing in defense of code (note my license class), simply extending an honest question to a person I'm involved in a conversation with.

However, after reading the above (your interest here is solely the elimination of the Morse Code test), I now have to wonder why we're now having this long, drawn out, discussion about emergency communications. There is almost no link between Morse Code and emergency communications today.

Nonsense! The paragraph you replied to with the above had to do with commercial communications facilities, not South Carolina disaster or emergency services systems. Commercial facilities have no legal mandate to provide communications following a disaster - if they do so, they do so only as a service to their commercial customers.

> To carry that absurd condition further, it would be
> logical to have the professionals doing all that
> "unreliable" step down, quit, and give the job over
> to an all-amateur organization that has all the
> ARES manuals containing all the answers.

I think this conversation is just about over. You're not even making an honest effort to discuss this issue. In one message you're talking about reinstalling fallen antennas following a storm and in the next message you've twisted that into having 911 dispatchers (and others) step down.

> Then what was all that emotional hoopla about all major
> roads being overcrowded and no one getting through?

See what I mean about no honest effort to discuss this issue. The "hoopla" was clearly explained when this issue was first brought up - the traffic prevented initial responders from quickly returning to the area following the storm (hindering initial assistance to the area). That situation was resolved by the time the National Guard arrived days later.

> Good citizenship is a true service and doesn't require
> any ham license.

But, when it comes to radio, it does require at least basic skills and knowledge about radio. The Ham Radio service is one means of providing that.

> If you see a real problem with disaster and emergency
> organizations in South Carolina, take your case to the
> administration of South Carolina. This isn't the place
> for it.

The storm in South Carolina was offered as a single example. The situations I described could occur in any state threatened by hurricanes. Similar situations could occur in many other types of disasters.

> Then stop with all the gratuitous implications and not-
> nice comments yourself.

You're reading things into my comments that simply don't exist. I've tried to remain as polite as possible during this discussion and there have been no implications (gratuitous or otherwise).

The Morse Code is not a barrier.

Knowledge of Morse Code is required under international treaty, to which
the United States is signatory.

>How about a special test for the microwave bands, above say 2.4 GHz? Once one
>passes this test, they can operate above this freq.

I already "operate" at 2.4Ghz, and WITHOUT a license...On the cordless
telephone, the baby monitor, the microwave oven...!

I have never claimed to be any sort of "military man", Len. Nor have I claimed any military or military-related service of any kind.

Nor have I claimed to be an "expert" on military matters.

For some reason, my knowledge of military history, limited as it is, bothers you a great deal. That's your problem, not my problem.

Dan, W4NTI, served in Vietnam. He answered my question. (Thanks, Dan).

You did neither.

Dan doesn't seem very bothered by my knowledge and opinions, nor my way of expressing them. Same for Dave, K8MN. Why are you so bothered?

You might want to look up Vice President Dick Cheney's military service record - particularly in the Vietnam era.

They seem to work pretty well now. As long as people respect them, I don't see much reason to make them mandatory. We do occasionally have an RTTY person working in PSK31 land on 20 meters, but even that isn't much problem.

If we made the bandplans mandatory, any changes would probably have to go through the same rigamarole that we have to do with say the 6 meter band.

I appreciate what you're trying to do here, Ryan. This is the moral equivalent of families taking over bad neighborhoods by using them! 8^) Call it the rrap block party.

We were a bit dismayed upon arrival after having done two tours in West
Africa prior to arrival. I wondered why the compound walls were so low

and had no razor wire atop them and I looked in vain for a backup
generator and the water filters.

Botswana is the only African nation to wean itself of US aid.

>
> The only attraction of xtal control for me is the simplicity of the

That'd be worth the visit. Since my sis moved from NYC to the West
Coast, I've not had as many occasions to spend time up that way.

We all thought it interesting that "WKRP" was chosen since there was a real WKRC operating at 550 KHz in Cincy.

That was prior to our buying this house. We were on holiday from Botswana and putting a month's worth of miles on a rental car. We'd been to Cincinnati, were visiting this area and stopped in the southern portion of the state on our way to Savannah, where my folks were living at the time. Andy's widow gave me the old parts and all of Andy's logs. My only option was to box 'em and mail them to Botswana. The stuff went with us to Finland and to Tanzania before we came back to the U.S. on a permanent basis.

That's pretty much true. The standoff I use at the base of one tower (for my 160m inverted "L") is a hardwood 2 x 4 purchased in Dar es Salaam. It looks like it will outlast me.

I wasn't so much worried about the short term stuff as I was about my frequency changing with the antenna swinging in the wind. This hilltop is as windy as a Len Anderson post.

Careful now, Brian. Vipul will mark you as a cult member. The CQ WW DX
'test is the ultimate whether one is a casual participant chasing new
ones or is going for a big score.

I haven't decided what to do for this year. I think my days of
operating 45 out of 48 hours are behind me. I lean more toward a single
band effort on 160, 80 or 40m. That way I can get enough sleep.

>
> Sick pups. Somebody would have to put a gun to my head before I'd
> actually go on the air with a Drake 2B and a Johnson Ranger . . .

Funny that you'd mention those two rigs. When I first got to
Guinea-Bissau, I'd received my household goods surface shipment but my
air freight had not arrived from the U.S. It contained my brand new
Paragon. I'd sold its Drake TR-7 predecessor in Finland before leaving.
The only rig I could put on the air during the first couple of weeks of

operation was a Johnson Ranger and a Drake 2-B/2B-Q combo. It worked surprisingly well though I was putting out only 40 watts or so.

Different strokes for different folks, Len. The reason I left SoCal decades ago is that the residents live in a "Hotel California" wherein all crimes are done by transients, all storms and diseases come up from Mexico and government not only takes care of everybody, but does it perfectly. By the same reasoning I'm sure California ACS works better than ARES. But please understand that back in America we still rely on ourselves instead of Government. We have volunteer fire and rescue squads, elected sheriffs and ARES/RACES volunteers to provide backup communications and we like it like that. If you're comfortable living where one town's (El Monte) SWAT team drives 20+ miles to Compton to murder an old man for living in a house a drug dealer once rented 25 years before then be my guest but I'll stay in America even tho I have to do a few ARES/RACES drills in case I need to help the good old boys out some day.

You have been brainwashed by Incentive Licensing. The class is the thing.
Bull crap.

The callsign of a person is like his name. Unique to that person alone.
But alas in the great wisdom of the great FCC all that is trashed too.

Lets go buy a dead mans call.

Drivers licenses are retested on regular basis? Where? No place I've been
in the last 40 years.

As for ham retesting. To prove what? Every ten years the test becomes even
more non relevant.....how would that help ham radios technical standards?

The 1988 Handbook reference I gave was not the first one. Just one I
had handy.

> European amateurs were already trying out and (successfully)
> using the Gingell polyphase network in SSB equipment before
> it was "recognized and published" in the USA.

That's nice. Nobody denies that.
>
> >> Imagine that...29 years ago someone in Europe tried something
> >> NEW, a network that didn't need special 1% value components.
> >> Didn't use some "venerable" old part from the USA.
> >
> >Isn't that obvious?
>
> Not to you.

You're wrong about that.

> You keep promoting some old component manufactured
> by a Pennsylvania company long ago...as if it were the final word on
> state of the art.

Where have I done that? Mentioning is not promoting. I used to have
one of those networks, but sold it long ago.

And the Gingell network is hardly the "final word on state of the
art".

> Can anyone understand geographic bias on your
> part? [of course they can]

You often see things that are not there. Len. You've repeatedly
written things about others' posts which you have failed to prove.
>
> Concentrate on the analysis done by Yoshida in the QEX article.

Why? You are not empowered to give orders.

> Note: Wideband performance is part and parcel of possible
> "Hi-Fi" SSB, aka wide audio modulation in radio.

6 kHz is not "hi-fi" (an ancient '50s term) by any stretch of the
imagination.

Why? Did any of them exceed 45 dB unwanted sideband rejection? 50 dB?

> >So what? Why are you stuck in the past? Do those old designs have better
> >performance? Are the parts and boards for them still available?
>
> Don't try this misdirection route, ancient one, you get lost.

I just asked some questions. You don't want to answer them. Perhaps
you don't want to admit that those old designs did not do better than
newer designs such as the KK7B R2. Perhaps you don;t want to admit
that parts and boards for those old designs are as hard to come by as
the old B&W PSN network....
>
> I'm not the one who has running bibliographies of old ARRL

> >do not like to admit that the inventor is a 1x2 Extra.
>
> Misdirection on your part again, Jimmie. Tsk, tsk, tsk.

Then WHY did you omit his callsign and include everyone else's?

> Dan Tayloe wasn't born with his amateur radio callsign, was he?

Nope. Neither were any of the other people you mentioned. But you
omitted his callsign and included all the others.

> He has an uncommon surname which should be noticeable.

He has a unique callsign, too.
>
> The elegant innovation/invention of the Tayloe Mixer is applicable
> to ANY radio-electronics situation involving heterodyning, not just
> amateur radio. Dan Tayloe has much to his credit in invention
> and innovation and much of that work is not just for ham radio.

Nobody disputes that.

But the FACT is that the first practical use of that innovation was in
a high performance, CW-only, direct-conversion amateur radio
transceiver.

That fact really seems to bother you.
>
> Try recognizing the PERSON, not the callsign, Jimmie.

I recognize both. You suppress the callsign, even in an amateur radio
newsgroup.
>
> >> You can't seem to recognize that, can you?
> >
> >You couldn't be more wrong, Len.
>
> I think I'm right in my assessment of you and your "qualifications."

No, you're completely wrong. But you will never admit it, no matter
what qualifications are presented. You've already demonstrated that
behavior in here many times.

> >Does that bother you? It sure seems to. You carefully avoided all mention of
> >the inventor's callsign, Red Hot Radio and the Pacificon paper.
>
> "Carefully avoided?" :-)

Yep.
>
> I identify people, human beings, by their names. That is the convention
> in most world societies.

This is an amateur radio newsgroup. In amateur radio, identification
is primarily by callsign. Callsigns are unique, names are not. First
names are
used rather than last names in conversations and correspondence.

This simple convention really seems to bother you, Len. You want to
impose
your convention of last names and invented nicknames on others, rather
than
callsigns.
>
> >> Yes, there are. Hans is a relatively young lad (under 30)
> >
> >Why do you talk down to him, then?

That's nice. His projects are quite interesting. It's also interesting
that you do not criticize his projects the way you criticize others.
>
> >A lot of us are ACTIVE in trying out both new and old things. Some of us
> >also like to work CW with our homebuilt, homedesigned equipment.
>
> Of course all of you "us" do. We've all been informed of your
> "homebuilt, homedesigned" Elecraft K2. :-)

I don't have a "homebuilt, homedesigned" Elecraft K2. Only a few of
those exist, and they are used by their builder/designers.

My K2 was built from a kit. I have never claimed otherwise. You seem
to have a reading comprehension problem about that.

The K2 is not my only HF rig.
>
> >No, it's correct. How many superhet receivers with crystal filters have you
> >built at home, Len?
>
> Only two for HF. :-)

I've designed and built at home three receivers and three
transceivers, all HF, with crystal filters. That does not include the
K2 or other nonhomebrew equipment.
>
> As an electronics design engineer (retired but only from regular hours),
> I've had to do cost evaluations for both R&D and production projects.

> already-built projects and cost them out. Crystal filter components
> are more expensive than an entire sub-assembly of polyphase
> networks and its attendant op-amp circuits and its heterodyne
> oscillator phasing sub-circuit. That's the way it is.

Your cost analysis methods are too narrowly focused. The amateur
requirement is for a transceiver, not just a receiver. There is also
the matter of performance, particularly unwanted-sideband rejection in
reception.

In simple direct-conversion designs, the phasing method has obvious
advantages. But in a superheterodyne transceiver, more performance is
expected.

And if there is a cost example, why didn't the manufacturers convert
to the phasing method long ago? The Gingell networks you promote have
been around for over a quarter century.
>

So you have only a tiny bit of experience with them.

> I have the literature on design that
> appeared in QST and QEX as well as other places. The time and
> trouble of matching crystal characteristics, exact resonances, and
> accurate measurement of results is inordinately time-consuming.

For you, anyway.

> Anyone doing that needs a stable, accurate frequency counter
> AND stable generator; I designed and built my own counter

That's nice. I did the same thing in 1975. My counter can also
function as a "digital dial" for an HF receiver or transmitter, of
almost any heterodyning scheme.

> and
> have both an HP 606 and HP 608 signal generator to use in my
> workshop.

And it took you all that time?

> Such "homebrew (crystal) ladder filters" are NOT
> weekender projects nor are they cheap to make for one-of hobby
> applications.

You're behind the times, Len.

Microprocessor crystals are available in quantity for low prices. If a
filter is intended for use in a receiver, it can be tested in the

receiver and a simple fixed-frequency signal source used.

For verification and measurement of the passband amplitude, simply
feed noise from a noise generator into the receiver and feed the
resulting audio into the soundcard of a PC. Audio analysis software
will chart the result. Of course this method tells nothing about the
unwanted-sideband rejection, nor the phase characteristics, but it
does work for its intended purpose.

The amateur builder has other sources, too. For example, Inrad sells
high-performance well-documented monolithic filters in the $100 range.
They also sell matched filter crystal/capacitor sets for $24.

And if even that is too much, surplus and used filters are available
through various sources such as hamfests, eBay, etc. While their use
may offend your "professional" sensibilities, they work just fine for
amateurs building one-of-a-kind rigs for their own use.

Yet another source is "basket case" amateur equipment. It is not
unusual to see worn-out parts-units examples of ham gear such as Tempo
Ones, FT-101s and Heath SB/HW series going for low prices. Fixing them
up isn't worth the effort but as
parts sources they can be gold mines.
>
> >That's nice, Len. But it's not a receiver or a transceiver.
>
> Tsk, tsk, tsk, the tassel of your MSEE cap and gown must have

I have done it. Many times. Doesn't mean I have to reinvent the wheel,
though.

> Elecraft has some other products in kit form, several other
> manufacturers do, too. Those would allow you to "build"
> something and get it on the air.

Been there, done that.

> >You're avoiding the central issue: Are there practical phasing type receiver
> >implementations that result in better than 50 dB of unwanted sideband
> >suppression?
>

> Is that the "central issue?"

When comparing methods to be used in receivers of the type being
discussed, YES.

> I don't claim to have seen every phasing type SSB application, so
> all I've done is mention SOME of them. Anyone can "do the
> numbers" in conceptual design for evaluation. Design engineers
> DO that for a living. Hobbyists can do the same if they apply
> themselves. I've done both.

But you haven't actually built any phasing-type HF SSB receivers that
exceed 50 dB unwanted sideband rejection, have you?

> "50 db unwanted sideband suppression" limitations or exceedances
> apply equally to crystal filter SSB subsystems. Their frequency
> responses can be upset in circuit applications by mismatching

You're slowly getting his real drift . . . no matter what you post
he'll jump all over it and twist it sometimes to completely irrational
extremes. The more you post your views or even facts the better he
likes it, there is no end to his circles, you'll never "win" when you
post anything positive about ham radio for one. This is one of few NGs
in which his trolls gather any attention at all which is the only
reason he lurks here. It's all juvenile gamesmanship on his part and
nothing more.

It seems like this newsgroup should be renamed
'rec.radio.amateur.bitchingandmoaning'. With some exception, I don't
see much 'policy' discussed... just a lot of complaining and flaming.
Sounds like 75 meters, or 14,313!

Good Grief!

Driving ability DIRECTLY affects public safety.

A hobby activity involving radio does NOT directly affect public safety.

It's as simple as that...

I don't think the FCC has data covering ARRL "divisions."

The FCC does provide a publicly-accessible database of ALL US
amateur radio licenses which includes last-known postal address.
That database has been publicly available for decades...but has
only been free without cost of reproduction since the FCC got
Internet access.

The 6th callsign district is getting fairly full of licensed amateurs.

According to a K8 in here it isn't part of the United States.

>A callsign is just a callsign... that's it. It is the operating privileges
>allowed by the license that makes the difference.

According to Jim Kelley in here, he said said the callsign "is what
we are!"

That's fairly telling of personal opinions. Callsigns are a TITLE
surrogate. Titles are much beloved by the nobility. Callsigns
show that amateurs have conquered the ultimate peak in proving
manhood, proving genius level knowledge of radio, and are
generally superior to ordinary mortals. Always. :-)

>I have never claimed to be any sort of "military man", Len. Nor have I
>claimed any military or military-related service of any kind.

Ah, but you know all about "rear echelon" activites, don't you?

>Nor have I claimed to be an "expert" on military matters.

Sure you have. Google has many posts where you want to
"correct" others military-related experiences or elevate certain
ones above certain others. Especailly in times before your
life existance.

>For some reason, my knowledge of military history, limited as it is, bothers
>you a great deal. That's your problem, not my problem.

Noooo, mighty warrior, it is YOUR problem.

I did my US military service long ago.

You've NEVER done any.

>Dan, W4NTI, served in Vietnam. He answered my question. (Thanks, Dan).
>
>You did neither.

Tsk, tsk, tsk. The FRENCH were busy getting their colonial
butts kicked in Southeast Asia when I was on active duty.
I was in Northeast Asia.

YOU never served your country anyplace.

>Dan doesn't seem very bothered by my knowledge and opinions, nor my way of
>expressing them. Same for Dave, K8MN. Why are you so bothered?

You are all Mighty Morsemen. :-)

Why are YOU so bothered that you reply at all about "anti-morse"
comments?

You should feel snug and secure in your Mighty Morsemanship
as an Amateur. Why do you trouble yourself so?

>You might want to look up Vice President Dick Cheney's military service
>record - particularly in the Vietnam era.

Tsk, tsk, tsk. Why? Did Cheney have a ham call? Did he or could
he do morse code?

I looked up the record of everyone in my General Election sample
ballot. I didn't vote for Bush and Cheney. Get the picture or do you
need more than a pound of flesh?

Why don't you look up Herb Hoover's record. His son had a ham
license, didn't he? Hoover kept us out of Vietnam. :-)

Come to think of it, Millard Fillmore kept us out of Vietnam, too. :-)

How have you been doing with 97.1.(e)? Stopped any wars yet
with all that international goodwill?

That is an extremely biased "opinion" which is untrue as to the
charges you've made.

Such "charges" are disproven by reading the area newspapers,
listening/watching local broadcasting, attending City Hall and
County Council meetings and hearing the debates. Such
"charges" are untrue according to public police logs, several
local health and medical service agency statements, the
Immigration and Naturalization Service, local county sheriffs
and California Highway Patrol.

>By the same reasoning I'm sure California ACS works better
>than ARES.

I'm sure you think so...but we can all see evidence of how
biased you are. California ACS, the Greater Los Angeles
emergency communications organizations have been
PROVED BY EXAMPLE in many and varied examples.

>But please understand that back in America we still rely on
>ourselves instead of Government.

I'm sure you do in that separate mythical nation that lives
in your head.

California is still a State within the Union and citizens of this
state are also very much citizens of the United States of
America. There are more citizens of the USA in California
than any other state in the Union.

Yes, everyone in the United States of America has seen your mythical country's "reliance on self" from the seasonal hurricane disasters where all the commercial facilities "fail" only to be miraculously "saved" by hobbyists. Also, all of us citizens have seen/heard of the east-coast sniper randomly killing people in the east for at least a month of time, the mysterious eastern anthrax mailer who has yet to be identified, the schoolboy murderer/suicide in Pennsylvania, the double agents in the CIA and FBI who had done their work for years, CWO Walker of the USN doing his dirty deeds also for years selling secrets of US military cryptography to the USSR, the riots and fires in Jersey City, the crime rampant on the streets of NYC and Philadelphia, the vote-count debacle in Florida during the last General Election, the Columbine High School massacre, the Oklahoma City bombing, rampaging shootings in eastern post offices and at least one business, gang rapes in NYC's Central Park, the Daley Dynasty's politics in Chicago, seasonal tornado devastation in the Midwest, flooding rivers from the Dakotas on down to the Mississippi, bridges struck or damaged on major eastern rivers sufficient to shut down interstate highways requireing those bridges. That's just a few happenings east of California.

>We have volunteer fire and rescue
>squads, elected sheriffs and ARES/RACES volunteers to provide backup
>communications and we like it like that.

That's nice. Enjoy being a separate "nation" of all amateurs.

>If you're comfortable living
>where one town's (El Monte) SWAT team drives 20+ miles to Compton to
>murder an old man for living in a house a drug dealer once rented 25
>years before then be my guest but I'll stay in America even tho I have
>to do a few ARES/RACES drills in case I need to help the good old boys
>out some day.

No problem. Feel comfortable on the highways with a couple of roving snipers randomly killing people in a couple states for months. Feel comfortable about the FBI killing the wife of a militant or burning down the Koresh kompound or destroying the Muraugh Building with homemade explosives.

Feel comfortable with the seasonal hurricanes and tornados and their devastation. A couple centuries of direct experience ought to prepare everyone, right? With the incredibly powerful five-point Richter in Alabama now you can enjoy earthquakes as well!

Now go out to your militia compound and play sojer in da woods and keep a good group in the bull. [you've shown enough bull in here] You sound like your militia is working on a separatist movement to break away from the United States of America.

Here's a nice Latin phrase for you Separatists: "E Pluribus Dum Dum."

>Sincere 73, K3DWW

Hardly.

>commercial communications facilities, not South Carolina disaster or
>emergency services systems. Commercial facilities have no legal mandate to
>provide communications following a disaster - if they do so, they do so only
>as a service to their commercial customers.

You should really look into other Parts of Title 47 CFR besides
Part 97. Try Part 1, especially the Definitions.

"Commercial facilities" have every bit of a "legal mandate" to provide
communications facilities during as well as following a disaster or
emergency as do US radio amateurs. The "legal mandate" applying
to US radio amateurs is very general and rather ambiguous.

Your "legal mandate" concept just shows you, too, are a product
of ARRL's long, long self-serving, self-promotional wordsmithing that
has erected much patriotic bunting glorifying amateurism over the
years.

> I think this conversation is just about over. You're not even making an
>honest effort to discuss this issue.

My "honest efforts" are as "honest" as yours when you claim that
all "commercial" facilities (including government) "fail" in a disaster.
[you should have included 'emergencies' since 'disaster' is a
catastrophic event]

You've labeled an Earthquake as "small, isolated" when it affects
10 million citizens, leaving them without electrical power. That's a
very regional-biased description and depreciatory.

>In one message you're talking about
>reinstalling fallen antennas following a storm and in the next message
>you've twisted that into having 911 dispatchers (and others) step down.

You've made the claim that "commercial facilities fail." As a
generality.

You've not, repeat NOT, shown that amateur facilities will succeed
or even work better than commercial facilities in disasters.

You've stated that National Guard units are underequipped, late
on the scene, and of little use.

> See what I mean about no honest effort to discuss this issue.

You can't redefine "honesty" to suit your personal tastes.

You can't redefine "honesty" when you aren't honest to begin with.

>> Good citizenship is a true service and doesn't require
>> any ham license.
>
> But, when it comes to radio, it does require at least basic skills and
>knowledge about radio. The Ham Radio service is one means of providing that.

But...only ONE means.

You've already charged that "commercial facilities fail" during disasters.

Note: There is NO "Ham Radio service" in the law of US civil radio.
There IS the "Amateur Radio Service." Throughout all of Title 47 CFR
the word "service" is a regulatory term denoting a type and kind of
radio being regulated in the different Parts.

> The storm in South Carolina was offered as a single example. The
>situations I described could occur in any state threatened by hurricanes.
>Similar situations could occur in many other types of disasters.

Hurricanes aren't the only "disasters" to befall the United States.

You've labelled the 1994 Northridge Earthquake as "small, isolated"
even though it affected 10 million people suddenly and without any
warning.

>> Then stop with all the gratuitous implications and not-
>> nice comments yourself.
>
> You're reading things into my comments that simply don't exist. I've tried
>to remain as polite as possible during this discussion and there have been
>no implications (gratuitous or otherwise).

You've made the claim that "commercial facilities fail during disasters"
yet you've made NO claim that amateur facilities will succeed.
Indeed, you've hardly mentioned amateur radio in comparison with
commercial or government radio.

Do I have to reiterate your label of a large earthquake being "small,
isolated" again? That is NOT a nice label to any of the 10 million
who survived the quake or the 50+ who died as a direct result of
that earthquake.

You are following the many-years tone of ARRL "news," that of
Sinning By Omission. ARRL has consistently emphasized,

spotlighted, practically underlined the role played by amateurs while carefully deemphasizing or outright omission all the work done by other non-amateurs during disasters and emergencies. That is NOT "news" by any journalistic standards. It is just self-serving propaganda designed to make amateurs feel "proud" of "their service" even though the vast majority have never participated whatsoever in any disaster or emergency. It paints an extremely biased, almost jaundiced view of activites done by those who engage in a hobby for recreational purposes.

Such one-side propaganda is NEVER "honest."

As the person who works at his Stealth job puts it, "you don't have
a need to know!" :-)

Lots of folks in this newsgroup have a LOT of opinions NOT about
amateur radio and express themselves volubly. Ask THEM, okay?

>Notice I'm not arguing in
>defense of code (note my license class), simply extending an honest question
>to a person I'm involved in a conversation with.

The only "conversation" in here is between three of the Gang of
Four currently using this newsgroup as a nice Chat Room about
old radio sets.

> However, after reading the above (your interest here is solely the
>elimination of the Morse Code test), I now have to wonder why we're now

>today.

Impossible, Dwight! How many times have you heard the trite old expression "morse code gets through when nothing else will!" How many times have you heard the bus driver shouting that "morse code is an "effective, valuable skill?" :-)

Morse code is put on par with teaching all hams the very best in radio skills, theory, knowledge, experience, and everything. Once they know code they know everything!

>
> If no, why?

1) Some parts of the plans are dictated by the FCC already.

2) Where not dictated, local usage should dominate. The current arrangement allows for that. That also allows for experimentation, which is one of the premises of amateur radio.

Yes, he did.

> Fact: I was never assigned at a place called "Tan Son Hut".

Was the spelling -real- close to "Tan Son Hut?"

> Fact: Len wrote of my moving boxes at a supply depot.

You've never moved boxes while in the service?

You must have been very special when you were in Vietnam. Did you
serve with Algore?

> Fact: I never moved boxes or even visited a supply depot in Viet Nam.

I guess everything was FEDEX'd to you.

Fact: moving boxes is a part of military life. I've moved boxes at a
supply depot. I've moved boxes on and off airplanes. I've moved
boxes at remote airfields.

Fact: my AFSC was not "box kicker."

Fact: You've got more cuts, skinned knees, and bruises as a result of
throwing yourself to the floor every time you encounter a misspelled
word, such as "Tan Son Hut." Don't go blaming Len for your poor
behavior.

the arrl has no 'representation' on the fcc so the question is moot. they
are just another group who submits petitions and comments.

The PCTA doesn't want to kill off amateur radio that badly. Besides,
there is a limit to their ability to continually improve, and they
would soon find themselves w/o a license. Its OK when other people
cannot get licenses bexcause of an arbitrary and unnecessary
requirement, and another matter entirely when their own licnse is
threatened.

It ain't broke so don't fix it.

-OR-

Who needs even more regulation?

-OR-

"They" can't enforce the regs already on the books, why bother with more regs?

Yeah buddy....bring up some that remotely connects and see how it flies.
No....it is not like it was in 1912. From what I understand those folks
were actually improving the state of the art. Now they are trashing the ham
bands.

Gee Len over 21....thanks for the clarification...And for all these years I
thought it was a means of identifying my station.

ARRL representation

From: "Ryan, KC8PMX"

>Since the ARRL roughly estimated has about 25% of the total amount of
>licensed hams as members, should they have an equal amount to that as their
>level of representation to the FCC? i.e. 25% representation?

No way. The ARRL helps and represent all licensed radio amateurs, whether or not they become a member. ARRL acts for Hams when the Hams themselves are unable to. The other 75% are an unorganized group. Acting on their own, the other 75% will not be as effective and will weaken the ARRL's position.

If one has a difference of opinion, they can bring this up to the ARRL. If they are not happy with that, other groups can be formed.

Also, the ARRL represents a more balanced view, supporting all aspects. If it were up to the current Hams, the hobby will be concentrated in a few areas.

There was a significant story on amateur radio today. On WNPR public radio, they had a half-hour story on Ham radio. They mentioned making contacts, mobile operations, Hams helping with Columbia disaster.

This half-hour story, on Ham radio, by a credible news organization, was surely heard by many.

From K4YZ:

> Obviously you've not opened the Extra Class study guide, Vipul.

I have a copy of the Extra Class study guide. Hate to sound like WA8ULX, but the Extra Class is question pool format, and can be learned in a day.

>Knowledge of Morse Code is required under international treaty, to which
>the United States is signatory.

And who came up with this Morse code requirement that requires one to learn English?

>I already "operate" at 2.4Ghz, and WITHOUT a license...On the cordless
>telephone, the baby monitor, the microwave oven...!

Comercial products, such as TV, do not require a license to operate.
Amateur radio operation, such as ATV, requires a license.

I don't know of any 2.4 GHz baby monitor.

hmmm, sounds about like how many people vote also! 8^(

If not the ARRL, then who would represent hams?

Things like band threats are real.

One of the better social experiences was helping to track down a child who had become separated from her mother at an event. It was quite an experience trying to calm the mother. Fortunately the kid had just biked Waaay ahead, and we got the next ham who saw her to get her to stay put. Not much compared to a big disaster I guess, but the mother was quite happy that we were there to help.

On a ham note, I just found out I placed third in my division in the NEQP. Not too bad for a (mostly)deaf guy! ;^)

I suppose This isn't all that much, but then I've only been a ham for 4 years now.

I run the GOTA station for my club at field day. I've found this to be a big help. So many people are intimidated to get on the air because theoy aren't sure what to say. The structure of the contest exchange and a person there to walk them through the experience may end up getting them more involved. One fellow I worked through the process had his general, but was kind of shy. By the end of the weekend he was hooked. After the experience, he's become a rabid ham, and is on HF all the time.
